Representative government rivals Cleopatra in infinite variety. New developments of it are all the while occurring to startle old fogies. What could have been more unexpected, for example, than the President's threat of "Taft or me," and its success in bringing the Republican party to his heel? Something similar, it would now appear, is to be used to intimidate the Republican organization in New York. Floating hints to that effect have been caught up and given body to by President Herbert Parsons of the New York Republican County Committee. He broadly intimates that, if the Legislature does not in special session pass the Governor's bills to prevent race-track gambling, Hughes will run again, be elected, and compel the Legislature to enact not only the anti-gambling measures, but many other reforms as well. This is expected to strike terror to the hearts of Republican legislators. As the national party has to take Taft lest a worse thing befall it, so the Legislature is expected to take a single bitter dose of reform lest it later have to swallow the whole pharmacopœia! This is queer enough politics, but as an illustration of the operation of representative government it is still queerer.

We detect only a limited enthusiasm over Mr. Hearst's new party. It is certain, of course, from the claims of his own newspapers, that his followers are numbered by the million, yet they are keeping surprisingly quiet. This may be because there is such profound harmony in their party that there is no need of any clamor or contest. There is something to be said for having a tight little party, with a membership no larger than the roster of Federal officeholders, so that each man may hope to get a job. Some wonder has been expressed at the constant insistence of Mr. Hearst's newspapers that his is a "National Party." We think we know why. Mr. Hearst got the idea from reading John Morley, who noted that "Bolingbroke resorted to a common device of embarrassed politicians: he called for a national party."

The Appellate Division of the New York Supreme Court has ended one grave abuse of the injunction, although it is not one of those to which the President has referred. When the theatrical managers of this city decided to bring suit against Police Commissioner Bingham for his action in closing Sunday performances, they obtained injunctions to prevent his men from entering any theatre or music-hall on Sunday except to serve warrants. In this ingenious way they expected to protect themselves by making it impossible for the police to get evidence of violation of the Sunday law. Now, by the Appellate Division, in a clear-cut and well-expressed decision, written by Justice Ingraham, this trick is blocked. The court points out that the effect of the injunctions is to give immunity from the police to certain persons and to segregate "from the rest of the city of New York a territory in which, during that period, crime may be committed with impunity." This is, of course, a plain, common-sense statement of the facts. But it is of enormous importance to the police that this view prevail. If theatres could obtain immunity, other law-breakers could as well, and those charged with the enforcement of the law would speedily find their task an impossible one.

"They all do it," is practically the defence of the head of a firm of stockbrokers, who admitted having used the securities of his customers as collateral for his own loans. "It's wrong," he frankly conceded, "but it's business." With this we may put District Attorney Jerome's defence, or perhaps we should say explanation, of the Metropolitan Street Railway's practice of "standing in with politicians"—that is, in plain English, bribing them, or submitting to blackmail at their hands. Mr. Jerome gravely said that this was really in the interest of the Metropolitan's stockholders. Without such secret payments to Tammany and to the Republican bosses, the necessary permits for street openings, and other official facilities which the company desired, could not have been obtained without great delay and loss. Therefore, if by paying out $17,000 in bribes, you could make $100,000 for your stockholders—not forgetting yourself—there was a clear business profit of $83,000. That being so, why drag in the morality of the transaction? It is not often that we see the money standard thus unblushingly avowed to be supreme. Even when men have no dregs of conscience left, they usually have some few remnants of hypocrisy about them, to prevent them from stating frankly the principle upon which they act without principle. But it is well to have the thing blurted out, from time to time. In that way we at least get a sort of touchstone by which to test current business morality. The blunt phrases of unscrupulous men—like Croker's "working for my own pocket all the time"—abide in the popular memory. They serve as catchwords, and even, such is our incurable American levity, as jests, but they do a useful office in compelling us to pause and take stock. Is it really true that our business and our morality can be entirely severed? May one be, individually, an upright man with the most delicate sense of honor, yet stoop to business practices which run close to violation of the Penal Code, and leave any conceivable moral code a wreck? The questions answer themselves.

Of the exact extent of this cynical obliteration of morals in corporation and other business, no one that we know of is in a position to speak with authority. It has confessedly been terribly common. That is, in part, what has been the matter with us since last October. Dishonesty breeds distrust. Let the notion once prevail that all securities are uncertain because all banks and railroads and corporations are doing with their eyes open the thing that is wrong, so that nobody's savings or investments are secure, and presntly no more money for investment will be forthcoming. It was not alone suspicion of financial unsoundness which brought on the panic of 1907; the moral soundness of our captains of industry was gravely questioned. Some men seem never to learn that even the business world must be pillared in honesty. Good faith and fair dealings are of the essence of buying and selling, if buying and selling are to be more than single slippery transactions, and are to go on from year to year. Hence the dishonest business man, even though temporarily successful, is the greatest enemy of his fellows. They are all obliged to suffer for his misdeeds. Imagine the trouble and expense to which many brokers have been put by the revelation that one broker coolly reckoned as his own, securities deposited with him. Think of the annoyance and hardships of other corporations, consequent upon the organized system of bribery so long maintained by the Metropolitan Company. One of the blessings of a time of business depression is that we see questions of business morality in a new light. Prosperity gilds the ugliest vices. If a man has millions to show for trickery or outright deceit, it leads some to think that the old-fashioned virtues are not so essential as is said. But when moral dishonor goes hand in hand with business failure—when bribing runs into bankruptcy—we are not so inclined as we were to sneer at "copy-book morality." Business men, and the public in general, ought to be able to read a moral teaching in recession of trade and commercial failures. It is that men are men before they are brokers or merchants or manufacturers; and that they cannot expect even to transact business successfully if, instead of manhood, they bring to it "the shaken thing of lusts."

Winston Churchill's defeat in the Dundee district was unthinkable from the beginning of his canvass. Yet so many observers were actually nervous over the outlook for his return that his substantial majority must seem doubly welcome to the government whose majority is so steadily decreasing. The promise of old-age pensions, the reduction of the tax on the sugar which goes into Dundee jam, and what the critics of the government call "Socialism and water"—all these helped, no doubt, as well as Mr. Churchill's own vigorous campaigning and his ready wit. Not only were there Labor and Probibition candidates, besides the Conservative, to split up the vote, but such Unionist free-trade journals as the *Spectator* urged the citizens of Dundee to abstain from voting unless the Conservative candidate would promise to do nothing in the present Parliament to commit the country to the policy of protection. The *Spectator* itself hoped for Mr. Churchill's defeat, in the belief that it might cause the government to "draw up, even on the edge of the precipice." But Mr. Churchill is now safely in the Cabinet, ten years younger than his father was when, in 1892, he entered Lord Salisbury's first Ministry, and is embarked upon another interesting stage in what has been a meteoric career. This will naturally be the best test of his character which has yet come; it may now be seen if the curiously erratic streak in his father's composition is in any way reflected in his brilliant son and biographer.

The Prussian Poles have no intention of sitting quietly by and watching the expropriation of their lands. Having frustrated all the attempts of the Prussian Government to buy up their properties in open market, and to colonize the Polish provinces with Germans, the Poles are already taking the offensive against Von Bülow's latest move. Martin Biedermann, who has been the greatest competitor of the colonization committee, and has repeatedly beaten it at its own game by buying big estates and settling Polish peasant proprietors upon them, is now in the field with new suggestions. His own operations have placed in the hands of Poles just one-half of the land which the new law proposed to turn over to Germans; he expects now to form a society of land-owners to see to it that no property owned by a Pole shall fall into the hands of the commission, except by actual condemnation and sale. Where an estate is mortgaged, he would have the society take care that the interest is paid; if land is offered at auction, he proposes to run up the price. More than that, he wants his allies to purchase at once all the German properties that can possibly be obtained—there are many such—so that the commission will be compelled to use all its available funds for the acquisition of these lands before attacking the Polish properties. That Herr Biedermann's proposals are practicable appears from the attention given to his views in the Berlin press. He has demonstrated remarkable powers of leadership, just as the Poles themselves have shown amazing cohesiveness and readiness to spend money in defeating the will of the government. They are a unit; hence it is probable that, while the slow-moving, red-tape commission is buying up one estate, three others will be purchased and divided among a number of small owners. Moreover, the Poles are not in the least discouraged; if their fight is likely to be a losing one, they are going to make it long, and just as costly as possible to the Empire. If anything were needed to inflame them still more, it is the new associations and public-assemblage law, which makes it impossible for a Pole to stand upon a platform and address a Polish audience in its own tongue. History teaches that only consideration and tolerance can solve a racial problem of this nature, but the Germans have yet to learn that the retention by the Poles of language and customs can in no wise really injure the Empire. The cruelty of the repressive measures now resorted to is, on the other hand, certain to create traitors at home and ill-feeling abroad.

The Belgian Parliament, which has been discussing the Congo annexation treaty and the colonial law, brought its regular session to a close last Friday. A special session is to open June 2 for final consideration of the subject. The prolongation of the debate is regarded as a victory for the Opposition, inasmuch as it will yield an opportunity for studying closely the government project and for laying up campaign ammunition to be used in the approaching general elections. It is the government's policy to secure a vote on the question before the election takes place, while the Opposition has been arguing for a postponement of the final vote till the next Parliament, so as to give to the election the character largely of a referendum on annexation of the Congo. The extra session probably means that the government's views will prevail. In any case, however, annexation is now regarded as certain. Debate has largely passed from a discussion of the terms made with King Leopold to one of the future régime that shall prevail in the Congo. Under that head come the vexed questions of forced native labor as bound up with the rubber tax, of the restoration of ownership in the soil to the natives, and of the regulation of the concessionary companies, among them important American interests.

The latest flying machine, the invention of a Dane, a resident of Copenhagen, Ellehammer by name, has been pronounced by Capt. Ramsing, a high Danish authority on aeronautics, the best airship yet invented. It has an automatic rudder, which in some not yet publicly explained way keeps the ship in a horizontal position at all times. It has wings that can be folded to its sides when not in use, with the result that the whole machine requires no more housing space than an automobile. It is also the lightest machine of its kind, weighing as it does only 225 pounds, in contrast to the thousand pounds' weight of Henry Farman's aeroplane. Ellehammer's motor weighs only 70 pounds, but develops no less than 30 horsepower. With this machine the inventor has made, according to Capt. Ramsing, 200 successful ascensions. It would seem almost time, therefore, for him to undertake that long-distance flight which alone can put the stamp of genuine success upon his or any other flying machine, particularly if he is to get ahead of the ever active Wright brothers, who are now sailing about in North Carolina.

THE DEARTH OF ISSUES.

If some little political Peterkin were to ask to-day what the glorious battle between parties is all about, "and what they fought each other for," his elders would be hard put to it for an answer. Occasionally, as in the platform of the Massachusetts Democrats, we get a terse issue, the tariff for revenue only, definitely stated; but, for the most part, the announced programmes of the two parties are sonorously vague, and overlap each other. The Ohio Democrats, for example, want popular election of United States Senators and a law limiting the power of judges to issue injunctions in labor disputes. But these doctrines are not distinctively Democratic. The "New Idea" Republicans of New Jersey want popular election of Senators, and the President and many other eminent Republicans are on record as favoring a limitation of the power of judges in this affair of injunctions. The Republicans of Connecticut "protest against monopolistic combinations which increase the price of products merely to increase the profits of producers"; but protesting against monopolies, as in the Massachusetts Convention, is one of the favorite diversions of the Democracy. So it goes. Nothing could be easier than to select from Democratic resolutions a series of "ringing declarations" which Republicans would heartily endorse; and *vice versa*. Each party seems to have stolen the other's clothes, and to have found them an excellent fit.

And it is difficult to see how the platforms at Chicago and Denver can offer any sharp contrast. The tariff is one subject on which the difference might conceivably be clear, but apparently it will not be. The Democrats are for revision as a matter of course; but they seem in general to be lukewarm about it. They were for revision in the last campaign, but Judge Parker and his managers allowed that issue to be shoved into the background and obscured. Bryan seems preparing to follow the same course; he has never been much interested in tariff reform, and so far as his recent speeches indicate, he cares as little about it as ever. Among the great causes for which he is, as usual, willing to suffer martyrdom he does not include the tariff. On the other hand, the Republicans profess readiness to undertake revision. The Connecticut Convention wants "friendly revision," and Mr. Taft has expressed himself even more explicitly. The chances of a thorough overhauling of the Dingley schedules by the Republicans are remote; but the Democrats are almost as indefinite and hesitating. People will not forget that in 1892 Cleveland was elected on that sole issue; the Democrats, then comparatively united and enthusiastic, had a clear mandate for revision; but they failed miserably in the attempt.

Historically, the Democrats have opposed "centralization" of power, and some of the leaders are now muttering threats against the Republican Administration for robbing States of their rights. But for a campaign platform that plank is thin and rotten. In his agitation for strengthening the Interstate Commerce Commission—perhaps the greatest single engine of centralization—President Roosevelt has had the ardent support of Democrats all over the country, in Congress and out. The Federal food inspection laws also were urged by Democrats and approved by Democratic newspapers. And, to crown all, Bryan has professed himself willing to go even farther than Roosevelt in centralizing control of the railways. He is for the extreme measure of government ownership—not now, perhaps, but soon. Under such circumstances, it is inconceivable that centralization can be made a leading issue.

The Philippines, too, are to be set aside as a non-controversial topic. Our altruistic citizens are sick and tired of the subject. Congress, at the instigation of the protected interests, can treat the islands as it pleases; and Secretary Taft is the only prominent man to lift his voice in behalf of our little brown brothers. Bound up with the Philippines is the question of the army and navy; but here no party line is drawn. Utah Republicans want "a greater navy, with four more battleships"; the Connecticut Republicans sagely assure us that "as regards the army and navy, they believe the enormously valuable property known as the United States of America should be fully insured." This, however, is mild compared with the outgivings of Congressman Hobson, the Southern Democrat who led the fight in the House for four battleships. Indeed, the ablest opponents of the programme for a big navy are Senator Hale of Maine and Representative Burton of Ohio, both Republicans; and John Sharp Williams and his Democratic followers are the persons who have shown the greatest zeal for President Roosevelt's policies.

In fine, unless some unlooked-for event injects a new issue into the campaign we shall have one of those fatiguing and usually disgusting contests over personalities. No principles, no great ideas will be brought forward to stir our aspirations and summon our loyalty. The dreary question will be whether we like Mr. Taft better than Mr. Bryan, and whether Mr. Taft and his friends are on the whole likely to be more honest and capable in doing exactly the same things which Mr. Bryan and his friends want to do. The orators on both sides seem fated to go round and round in the same dull treadmill, and the press will thresh over the same old straw. Our political condition is almost precisely that which Lord Malmesbury ascribes to England in the introduction to a recent book, "The New Order: Studies in Unionist Policy":

> The chief need of both the old historic parties in England at the present moment is a logical and intelligible system of political philosophy, in the absence of which practical politicians must necessarily drift hither and thither among the shallows of opportunism.

OLD-AGE PENSIONS IN ENGLAND.

Both English parties have been for some years trembling on the brink of a national plan for old-age pensions; and now the Liberals are the first to take the plunge. It was known in advance that Mr. Asquith's budget would make a beginning. During the Manchester election, the new Chancellor of the Exchequer announced that old-age pensions would be seen within a twelvemonth. The Prime Minister now proposes that they begin in 1909. It is but a slender and experimental scheme which he unfolded to the Commons. To start with—and there are no steps backward from the cave of such governmental expenditures—a pension of 5 shillings a week ($1.25) is to be given to all worthy poor over seventy years of age, whose weekly income is not more than $2.50. Mr. Asquith reckons that the number of such pensioners will not exceed 500,000, and that the total yearly cost will not be more than $30,000,000.

The motives to this critical step are frankly political. The Prime Minister said that if his plan could be called socialistic, it was at least a kind of Socialism to which both parties were committed. This argument may do to shut the mouth of a political opponent; it cannot, however, meet the doubts or silence the inquiries of the economist, the philanthropist, or the political philosopher. Yet Mr. Asquith stated but the fact when he implied that both Conservatives and Liberals had been forced to take up the question for political reasons. The Labor Party has made it one of its cardinal tenets; and the Labor Party is now unprecedentedly strong. The constituencies have become pervaded with the idea of government pensions for the aged poor, and public men have had to deal with it. Committees have been appointed under either party to see if a bill could be drafted, and the money found. There was Mr. Chaplin's Committee of 1899; there was Lord Rothschild's Committee. Mr. Balfour's government was as strongly committed to the project, if ways and means could be devised, as the Liberal Ministry. There is thus no room left for partisan twitting. The Conservative objections to Mr. Asquith's plan necessarily reduce themselves to two: it goes too far, and it does not go far enough. That is to say, the scheme costs more than the national revenues can endure, and it should have been replaced by a scheme which would cost four times as much. Such is the logic of politics!

It is not strange, under these circumstances, that the opinion in the lobbies of the House was that the budget, with its attachment of old-age pensions, would be "popular." The government's proposals are expected to be adopted "without serious opposition." The most violent attack upon Mr. Asquith that the Conservative press can make is that he ought to have left all such legislation for his Conservative successor! No Liberal government can be expected to do the thing wisely. The charge is made that the money cannot possibly be obtained so long as the government clings to "the discredited fetich of free trade." But precisely there is where Mr. Asquith's financial cleverness comes in. He has produced a budget which is strictly free trade, which remits certain taxes—on sugar and marine insurance policies—lays no new imposts, involves a considerable reduction in the national debt, yet leaves a surplus of $30,000,000 for old-age pensions! This is what really infuriates the Tories.

Behind all these political manœuvrings, however, lie the serious questions about this new departure in English public policy. On what principle does it proceed? What are the consequences to be? There are two different grounds upon which the Labor Party demands pensions for the old workingman. One is that it is "a right" acquired by the mere fact of age. The man who has given his labor to the creation of the wealth of society, is entitled to maintenance when his working days are over. The other asserted basis of the pension is that it is a just compensation to those who have been actually underpaid for their labor. This implies that the rate of wages is not such as to enable workmen to provide for their own old age; hence the government must provide for it. On that we merely remark that this would be to shift to the community at large a burden which ought to rest upon the employers of underpaid labor; and that the net result would be to pension only a few in old age, while leaving all the rest to be "sweated" all their working days.

We must wait for the full text of Mr. Asquith's speech to show us what justification he offers for a non-contributory scheme of old-age pensions. The weight of opinion in England has been strongly in favor of making the pension a species of assisted insurance for workingmen. That is, the men themselves and their employers were to contribute towards a pension fund, which the government would supplement so as to make up the fixed weekly allowance in old age. This is, in general, the German plan, which France and Belgium have copied. It is true that New Zealand and Denmark have non-contributory pensions, but English conditions are so much more like those on the Continent that one would have expected the German model to be followed. Indeed, Mr. Asquith himself declared last year that he could favor no scheme which did not include contributions by the beneficiaries. Why he has now changed front in that respect, the meagre outline of his speech sent by cable does not explain.

Other questions press for an answer. How are the administrative details provided for? They would be endless and intricate. We presume that the Poor Law machinery will be utilized. What is the effect going to be upon the 3,000,000 workmen who are now paying dues to trades unions and friendly societies, in order to insure themselves sick benefits and a provision for old age? Will the nerve of their thrift be cut by the prospect of a universal government dole? If so, and in consequence new thousands come forward to claim pensions; if political considerations lead to the next step—reducing the pensionable age to sixty-five or sixty—and millions more be demanded from the Treasury, what system of national finance can support the strain? These are questions which serious men in England will be seriously debating during the next few weeks. It behooves Americans, also, to consider them, for no one can tell what day a President will bring forward the proposal that old-age pensions be established in this country.

GERMANY'S FINANCES.

> The growing inability of our half-absolute government to deal with the nation's finances is characteristic of our present political situation. In no other field of governmental activity is the superiority of democratic forms of government to those of half-absolute or despotic countries more evident than in this of finance. So far as our own situation is concerned, who would have thought a decade ago that Italian rentes would stand higher than Prussian Consols? The Italian budget balances; the German Empire enters upon its new financial year with a deficit of three hundred millions of marks.

Thus writes an able Berlin observer of German affairs. Perhaps, if he were more familiar with the extravagances of our present Congress in the face of our growing deficit he might feel inclined to abate somewhat his enthusiasm for the financial wisdom of democracies. None the less, the point is worth considering. Von Bülow and his Emperor have been intent on world-problems; they have had a finger in the Moroccan pie, and built up a great navy and waged a frightfully costly war in German Southwest Africa; but they have never had time to concern themselves with such a parochial question as a careful system of finance. The art of making one's income meet one's expenditures has been too bourgeois a matter to merit their attention.

The time has now come when this policy of indifference must cease. Indeed, the end of the tether would have been reached even had there not set in the present world-wide industrial depression. It has affected Germany much as it has the United States, for the economic development of the two countries since 1870 displays many striking parallels. Both have gone ahead industrially with giant strides; in both lands the development of the iron and steel industry has been especially remarkable. Their cities have grown by leaps and bounds, and their populations have been increased by millions in each decade. Both countries have come to rely more and more upon foreign markets, and of late both have gone through periods of great prosperity and expansion of credit. Now, Germany is, as Jacob H. Schiff has recently pointed out, so largely dependent upon foreign customers that the present depression has told more heavily upon her industries than upon those of any other European nation. Hence the present crisis is felt with "special force and severity," the manufacturers have had to turn to the banks for extra aid, and money is more difficult to obtain there to-day than in any other country.

It is not surprising, therefore, that the huge new Imperial and Prussian bond issues of $162,500,000 have had to carry 4 per cent. interest and to be sold below par—at 99½—or that there was only just sufficient demand to take up these securities. With these loans, the consolidated debt of the Empire reaches the enormous total of $1,063,000,000, while that of Prussia alone is just double that figure. In 1887, twenty-one years ago, the Empire owed only $121,000,000; six years later its debt had more than trebled. In fifteen years, therefore, its borrowings have grown from $435,000,000 to the present figure, and this in a time of peace and plenty. Germany now has the unenviable position of being second only to France in the size of her debt, if one adds to that of the Empire the debts of the individual states. Even Russia has to take third place, with England fourth. It is, of course, only just to point out that this comparison is not quite fair, since there should be a differentiation between bonds issued for productive enterprises, such as railways, and those that represent unproductive expenditures. Germany, for instance, has used a large part of her borrowings for the purchase of railways; but the newest issues are primarily to meet deficits in running the government; and it is this fact that provokes public concern and unrest.

This feeling of uneasiness is intensified by the absence of any clear-cut policy of financial reform. The Chancellor has announced that, in order to permit the new Finance Minister, Herr von Sydow, to become acquainted with the problems before him, no reorganization or far-reaching measures will be undertaken until next autumn. He promises that, beginning with the next budget, no appropriations will be asked, unless there is coupled with them a method of raising the revenue they call for. If this statement means that the Chancellor has mastered one of the elementary rules of finance, it must have been received with proper approval. But the fact is that his course during the past winter has shown remarkable instability of purpose. When the Reichstag met he had at first nothing to offer; then he worked on a plan for a brandy monopoly and for a tax on cigar ribbons. When the Bundesrat had considered them, they were suddenly abandoned. Then, in February, the Financial Minister was dismissed, and fiscal reform put off for practically a year. This may be sharp politics; but at any rate the continuance of the present chaotic conditions, and the consequent heaping up of the deficit, without a finger being lifted to remedy the trouble—this is not good finance. Meanwhile, bonds to meet current expenditures are issued upon terms that weaken the credit of the nation.

The statesmen who think of retrenchment in Germany to-day are as few as with us. The others heap up military burdens, vote millions recklessly for more battleships, appropriate vast sums for expatriating the Poles, or depriving them of their land. They must maintain German honor in Africa at any cost; but he who talks economy cries in the wilderness. Why speak of paring here and paring there, and striving to save a few miserable thousands? is only the political or editorial freelance or the Socialist who stops to consider what this policy of extravagance means, not only to the workingman, but to the man of small income and the great army of holders of office.

LUDOVIC HALÉVY.

British writers of the Liberal school are still fond of dwelling on the fact that the South African war was brought about by jealous defenders of England's imperial greatness, who bore such names as Bischoffsheim and Schwarzenberg, while the Little Englanders and pro-Boers were recruited from among the Vernon-Harcourts and the Campbell-Bannermans. If one had been asked any time within the last twenty years to pick out from among the forty members of the French Academy the one man who best embodied in himself what we generally call the Gallic spirit—the clear insight into things not always true, the half-satiric and half-lyrical appreciation of life, the facile artistry, the verve of dramatic action, the salt of style—the chances are that the selection would have fallen upon Ludovic Halévy, who was born of Jewish descent in 1834 at Paris, and died there last week. Our parallel is, however, a halting one. Concerning the sincerity of the London Jewish banker's Imperialism there might be doubt, but not of Halévy's right to typify the modern Parisian man of letters.

Evidently, the division between the Hebraic and the Hellenic spirit is not so fundamental as is commonly supposed. In any case, a career like that of the noted playwright and novelist, continuing the tradition of family that had already achieved distinction before him, illustrates both the capacity of the Jewish spirit to merge itself completely with the life about it, and the capacity of the French spirit, as corporealized in Paris, to absorb the foreign material and transmute it into one substance with itself. Some writer once remarked that the true responsibility for the outcome of the Franco-German war rested on the shoulders of one Jacques Offenbach. How could a nation which delighted in the travesty of serious things, of love as in "La Belle Hélène," and particularly of patriotism and military glory as in "La Grande-duchesse de Gerolstein," hope to make a stand against a people that takes life so seriously as the Germans? But if French frivolity, as consummately exemplified in Offenbach, the son of a Jewish cantor, brought the nation to defeat, the responsibility must be shared by Offenbach's librettist, Halévy.

There is a scene in "La Belle Hélène"—the beautiful Helen is, of course, she of Troy—in which the shepherd, Paris, is shown waiting for a letter from Venus. The message comes, carried, appropriately enough, by a white dove in its bill. Paris reads the note, and turns to the messenger. "Any answer?" The dove shakes its head. "Very well, then," says Priam's son, and the dove flies out. This is undoubtedly good fooling; but it is something more than that. In its fancifulness and its suggestion of a familiarity with the classic world that is made to border on contempt, the incident is an assurance that our author is devoting to the art of vaudeville powers which in the course of time will land him in the Academy. The way Halévy trod is the way most Frenchmen follow in their progress from obscurity to a seat among the Immortals. You begin by doing something clever and wild, preach an unrestrained and unmoral egoism like Maurice Barrès, or sing the life of the gypsy and vagabond, like Jean Richepin, or, like Maurice Donnay, recite anti-philistine verses at the Café Chat Noir, where the costume of the waiters is an imitation of the Academy uniform. With advancing years your laughter grows a bit more sober, your wit a bit more refined, your consideration for established things a bit more subservient, and you are a candidate for the Academic palms. At your reception into the Academy you are subjected to a mild form of hazing. Your frivolous past is brought up before you as something pardonable, and, on the whole, to be forgotten, and you enter into the tradition and inheritance of the Immortals. Like all immortals, you may not do very much useful work thereafter, but that is part of the scheme.

Like most great French writers, Ludovic Halévy limited himself to no single literary form. A playwright first, he is best known to the English-speaking races as the author of one of those charming idylls in novel form which the world adopts as its own and insists on making its own against all charges of sentimentalism and unreality. It is nothing against the merits of "L'Abbé Constantin" that its preëminent use among us is that of a text-book in secondary French. So the "Vicar of Wakefield" is used in Germany and elsewhere on the Continent, and the same use has made De Amicis's "Cuore" go through hundreds of editions. It is only illustrative of French versatility that "L'Abbé Constantin" should have been written by the author of "La Belle Hélène," though, for that matter, it would be easy enough to trace out the common element in both. In Halévy's best-known play, "Frou-frou," we have a far more serious theme than "Hélène," worked out with a far greater approach to reality than in "Constantin," but with the same supple dexterity. Nearer still to life he approaches in his studies of Parisian manners. Finally, Halévy had the good fortune that fell to many of his contemporaries in literature, of experiencing in person the disaster of the war against Germany. We say the good fortune, because in the development of the many-sided literary type we have been discussing, the war of 1870-71 has had a profound effect on France. Its events have entered as iron into the blood of its poets, romancers, and critics. To the history of the war Halévy contributed his "L'Invasion" and "Notes et souvenirs."

With no preëminent claim on the future, Ludovic Halévy's work will nevertheless live in part because of the high degree to which it carries the best qualities of French style—grace and lucidity. In his lifetime his reward was ample enough. The Academy is often sneered at as having had in its bosom Immortals whom the world has speedily forgotten. But it is no mean office to keep the memory of a man immortal while he is still alive. In that respect France does better by her sons than we, who must be aroused by some such specific event as an eightieth birthday to the fact that a great writer is still with us.

OUR ART MARKET.

It is frequently said that America is rapidly absorbing the world's best art, and this view is generally held in Europe. In short, the attitude of "abroad" in this matter is fairly abject. Italy, and particularly the department of fine arts, is in a chronic state of alarm over the pictures and sculptures that go, or are said to go, irrevocably to the United States. The laws governing exportation and the scrutiny of outgoing baggage become ever more rigid. Even in France and England, the government is urged to draw up lists of objects of art for preëmption the moment the dreaded American buyer appears. J. P. Morgan cannot approach a frontier with his motor car or a harbor with his yacht without causing a shudder. At such times those who cherish the *patrimonio artistico* dream dreams of its absolutely disappearing in Mr. Morgan's hold or tonneau.

It is hard not to believe anything at once so flattering to our own taste and enterprise, and particularly when we are feared by those whose condescension we formerly endured. Yet we suppose there were a few foreign bankers who, during the flush times of the Japanese loans, smiled when they were assured that their financial glory had departed, and we know that there is a handful of European collectors for whom the American peril has no terrors. If we look at the case frankly, the American peril means not that European collectors are generally outbid, but merely that they have to pay more than they like. But there are many amateurs in London, Paris, Berlin, Milan, and elsewhere who are not obliged to practise frugality. How far the facts are from the bogy of American monopoly may be judged from the following incident. We read in an Italian art magazine:

> It is grievous to think that the splendid pictures of the late Rodolph Kann collection must go to American galleries, since they alone are able to face the fabulous prices demanded.

And then we turn the page and read:

> Among the new acquisitions of the Berlin Museum from the Kann collection are two magnificent sketches by Rembrandt, examples of Wouvermans, Ruysdael, etc.

Moreover, the frequent statement that our amateurs have the first choice of everything sold by the great European dealers is simply false. There may be one or two London dealers who usually give the preference to their American clients, but the famous art merchants of Paris still sell when they can to an inner circle of Continental collectors, who, curiously enough, pay no such prices as we Americans pay for second or third choice. In short, wherever the American peril is examined, it looks relatively harmless.

Without making excessive claims, there is reason for rejoicing that many fine objects are coming to our side of the water, and the flurry so natural a process arouses abroad merely shows how late we have come to our own. We are making up arrears artistically with an energy that confounds the sober Old World, and a philosopher may safely predict the time when Europe and the United States will in common lament the transit of art to Chili and Argentina. But with all our buying, we have not yet established a normal or stable market for works of art; and that may give comfort to the misgivings of European alarmists, while mitigating our own complacency. A stable market presupposes an abundant supply, a corresponding demand, and a knowledge of the commodity. But outside of certain paintings of the French school, which have long been trafficked in commercially, and possibly Chinese porcelains, the sale of an art collection in New York is wholly uncertain and speculative. The returns depend not upon the state of the art market of the world, but upon the prosperity of the community, the prestige of the seller or auctioneer, and the plausibility of the advertising. Ridiculous prices are paid, and preposterous bargains may be found. Already the dealers of Europe are learning to profit by the capriciousness of our collectors. Outside a narrow range of accredited art commodities, it would be very hazardous to sell an important collection in New York. In particular, no wise collector would commit good examples of the old masters to our auction public. Note that Marsden J. Perry's collection of prints by Rembrandt, Dürer, etc., comprising the highest rarities. was sold not here, but in a European capital.

So long as our collecting represents so largely the mere vanity of great wealth or an equally ignorant desire for bargains, there can be no real art market in America. Fortunately, there is a handful of astute and wealthy collectors among us, and an increasing number of amateurs whose knowledge and taste keep well in advance of their pocketbooks. These real dilettanti will gradually effect the work of education that must precede the formation of any true market. Meanwhile, it is an open question who does the most harm, the reckless millionaire who pays any price for the right things, or the thrifty bargain-hunter who pays hopefully the wrong price for the wrong things. If there is anything that makes for discouragement, it is to see certain dealers annually unload upon us the revamped, fraudulent, or merely worthless rubbish of the European antiquaries. "You don't mean my charming (any great name) which I hope is genuine, and for which I paid only three hundred dollars?" we hear an agitated bargain-hunting friend protest. We do mean your what-you-may-call-it. In a free country, to buy such a thing is no crime; but it is at least inexpedient to buy in dollars what may be had for fewer francs in the junkshops of an Old World that dreads the American Peril.

A GRADUATE SCHOOL OF AUTHORSHIP.

A complaint against our graduate schools, printed on another page, is apparently a cry from the heart. Dr. Sherman has himself been through the mill, and he should know whereof he speaks when he says that these institutions offer no training for creative literary work. We share Dr. Sherman's regret. We should like to see more young doctors who can do even that writing which is in no high sense "creative"; who can express ordinary ideas in clear prose. This is not an unattainable ideal, but it is too often unattained. Our grief, however, is less poignant than Dr. Sherman's, because we have never expected the graduate schools to train for a career in literature; they have a distinctly different aim: to turn out teachers. The man who goes to a graduate school in order to become an author is patronizing the wrong shop. Both the organization and the discipline of the graduate school tend to unfit a man, not merely for writing popular books, but even for writing books that appeal to the average man of intelligence and education. A modern course leading to a Ph.D. in history would have killed Macaulay as an historian; and rigorous specialization in romance philology, after the modern fashion, might have spoiled both the poet and the essayist in Lowell. We say nothing against specialization. Though the wrong man may attempt it, or attempt it in the wrong way, it is none the less an excellent and a necessary work. But early specialization, at least, is seldom the path to authorship.

Your author—if he is to be anything more than a facile journalistic hack, on the one hand, or a Dry-as-dust on the other—must have ideas. Ideas come by observation and reflection. The observation may be the fruit of direct experience with men and affairs, or of extensive reading, or both. Mr. Morley, for example, is a man who has filled his mind from both sources of knowledge. Pater was something of a recluse, and confined his interest chiefly to literature and to art. Andrew Lang is distinctly bookish—an uncommonly fine classical scholar. Vernon Lee has travelled much in Europe, and also in the realms of gold. Kipling surveys mankind from China to Peru. The author's mind, then, must be wide-ranging, in the search not merely for ideas, but for points of view, side-lights, parallels from other places and times, happy illustrations. Macaulay's

"History" is brilliant and fascinating because his intellect swept over a field far vaster than "England from the Accession of King James the Second." Lowell's pages are almost too richly studded with strange jewels. In fine, the author is an author primarily because he has something to say.

Now the tendency in the graduate school is against intellectual ranging in any of its phases. Every school is more or less of a cloister: it affords few opportunities for direct observation of men. The policeman on his beat has a better chance to mingle with humanity. If a Tammany ward leader had highly developed powers of reflection and inference, if he were a philosopher, his mind would soon be so richly stored with material that he might write a new *Comédie humaine*. But for a graduate student such an undertaking would be unthinkable: he is confined to his books, his thesis, and his laboratory. And even in this restricted territory he cultivates but a tiny patch. If his work lie in economics or history, he is not urged to devote much time to *belles-lettres* or to natural science. He has all he can do—and more—in keeping up with the "literature" of his own subject. The scientist is only too likely to be a scientist and nothing else; and prolonged research in Anglo-Saxon syntax certainly does not furnish one with many ideas that the world will not let die. Editing one of Ben Jonson's plays may be admirable drill for the specialist in the drama; but Prof. A. S. Cook does not labor under the delusion that his young editors of Jonson are on the high road to authorship. He and they are making for another goal.

Whether any school can directly prepare for authorship as for law, medicine, the ministry, or engineering, is an open question. The experiment has never been fairly tried, though various persons have urged it, notably Walter H. Page, editor of *World's Work*. We now have our graduate schools for nearly every calling; indeed, Harvard opens next autumn a graduate school of commerce. But a school of authorship would need a different organization from any of them. It would lay its emphasis on reading extensively; specialization would be subordinate and incidental—perhaps entirely discouraged. Here the grave danger would be that the students might become mere *dilettanti*. They might half-know many things and be thoroughly grounded in nothing. Their minds might, as Newman puts it, be distracted and enfeebled "by an unmeaning profusion of subjects." They might find, too late, that smattering in a dozen branches of study means shallowness, not enlargement. To guard against this failure, some hard discipline in reflection and assimiliation must be devised—such as writing long and elaborate essays, which should be severely criticised as to both form and substance. But, again, reflection implies more or less leisure, and what outwardly appears like idling. As Stevenson puts it in his "Apology for Idlers":

> Books are good enough in their own way, but they are a mighty bloodless substitute for life. It seems a pity to sit, like the Lady of Shalott, peering into a mirror, with your back turned on all the bustle and glamour of reality. And if a man reads very hard, as the old anecdote reminds us, he will have little time for thought.

To coördinate the reading and the thinking, to allow for periods of fruitful idling, to provide some glimpse of life, say, by such means as foreign travel or newspaper reporting in vacation time, and to publish student writings and test them by professional standards—all this would be the formidable task of a school of authorship. We can hardly ask the ordinary graduate school to abandon its present work and change the whole direction of its energies for the sake of our intending essayists, novelists, and poets.

THE ROMANS IN ISTRIA AND DALMATIA.*—III.

THE ARCH OF TRAJAN AT ASSERIA AND TRAJAN'S ROUTE TO DACIA.

Perhaps the most jealously guarded of the few recent excavations by the Austrian Government Commission is that of the ancient city of Asseria, at Podgradje, near Bencovac, in the central part of the interior of Dalmatia. The city was founded long before the Roman conquest by some Greek colonists, who preferred to settle inland rather than, like the great majority of their countrymen, on the islands and the coast, where they founded the mother colony of Issa, its offshoots Epetion and Tragurion, Apollonia and Dyrrhachium in the south; Epitaurum, and several more. More exposed to attack by the native Illyrian tribes, Asseria was probably fortified from the beginning, perhaps in the third century B. C., and its walls are now among the most extensive remaining traces of the Greek race in Dalmatia. The city appears to have been one of the main inland centres of civilization, and it also appears in the annals of Roman conquest and occupation as an early storm centre.

Some years ago reports of casual discoveries on the site led the Central Archæological Commission at Vienna to decide on excavations. The leading archæologist and the architect in charge (Wilberg) were sent from Vienna; a young native archæologist from Zara was attached to the party as assistant, partly because of his local knowledge, partly because the objects found would naturally go to the museum of Zara, the nearest Dalmatian city. Another Dalmatian archæologist, now attached to the museum of Trieste, also took part. The photographs and drawings are hoarded in Vienna. The results appear to have been disappointing. I was told that the work was badly bungled. No official report—no report of any sort—has ever been published. The architectural fragments unearthed were nearly all left on the ground, and have been destroyed by the neighboring villagers or used as building material. One discovery of extreme interest was certainly made, and through much mystery and indifference I have been able to piece it out. It is that of a memorial gate to the Emperor Trajan, erected to him in 113 by his prætorian prefect, or military commander of the province, P. Atilius Æbutianus, and dedicated, with a banquet by Laelius Proculus, for the city.

It is evident at first sight that the gateway is much later than the walls, which are constructed of immense blocks of stone, somewhat bossed and rusticated. The wall was broken in order to insert the gate, which was made to project somewhat on the left, and to recede on the right side. In its form, this gateway, with its single arcade, has more the appearance of a memorial arch than of a city gate, and should be considered in this light. The gate was still standing to a height of between fourteen and fifteen feet, and all the elements of the upper structure were found lying at the base. The principal or outer face, looking toward the country, had a double attic with a double inscription: above that of the dedicator, below that of Trajan. Both inscriptions are now at Zara. Below the attics the projecting cornice and frieze were supported by four free-standing columns forming the "order," while two smaller engaged shafts framed the opening and supported its archivolts. To the free columns resting on a high common base corresponded wall-pilasters on each of the two piers which they framed. On the other side of the arch, facing the city, the columns are not free but engaged. Of sculpture there is no trace beyond the usual decorative work and two remarkable colossal heads in very high relief, usually attributed to the two keystones—one a bull-protoma and the other a head of a youthful deity with rams' horns and a nascent beard; emblems of the city which find their counterpart in many other Roman city gates, as I have shown in a previous letter in connection with Trieste, April 23, 1908, p. 370.

But what is of unique interest, architecturally, is *the use of free-standing columns* on the main façade. There has been quite a discussion as to when they were introduced to replace the engaged shafts, producing greater effects of light and shade and new relations of form, through the overhanging attics which they supported. The so-called Arch of Drusus in Rome had them, but they are an addition of Caracalla; the most popular use of them for the general student is, of course, in the arches of Septimius Severus and Constantine in Rome. But hitherto no example has been found earlier than Hadrian, Trajan's successor; and even his arch at Athens, which has them, may not have been built until after his death. For a while it was thought that Trajan introduced them, on the strength of his arch at Timgad in North Africa, but it is now known that this arch was not built in Trajan's time, but in that of Hadrian or Antoninus Pius. At Beneventum the arch of Trajan still has engaged shafts, and it was built in 114. But a year earlier, in 113, here at Asseria, the imperial architect—he cannot have been a native, but one of the military or government officials—introduced this innovation. At least. until further discoveries cast this arch down from its pinnacle it is the banner-arch of the free-standing columns, the earliest remaining model of this new type which was to become the most popular of all classes of memorial arches. At the same time I believe I have discovered the source of the Asseria design, the destroyed original triumphal arch built in Rome in honor of Trajan a few years before, in about 107 A. D., as a memorial of the Conquest of Dacia, just before the building of the Forum of Trajan. The coins which portray this Dacian arch show very plainly that it has free standing columns supporting a broken architrave. Its designer and the inventor of this type is likely to have been, therefore, Apollodorus of Demascus, the famous architect and engineer of Trajan.

---

* Other articles in this series have appeared in the issues of the *Nation* for May 30, August 8, September 5, and December 5, 1907, and April 23, 1908.

But this gate is interesting for historical and military, as well as architectural, reasons. It gives a different aspect to the question whether, in his second and principal Dacian war, Trajan reached the Danube by way of Dalmatia. This theory has been so universally scorned by those who have made a long and careful study of Trajan's Dacian wars, by authorities such as Cichorius and Petersen, that I hesitate to support it. But, while I cannot here discuss their theories as to sea and land routes, I can indicate some of the reasons for supposing that Trajan actually carried his army to the Danube through central Dalmatia and its *hinterland*.

We know that Trajan's first war in 101 and 102 A. D. was not one of conquest, but aimed at making of Dacia and the land across the Danube, a quiet state under the general suzerainty of Rome, a sort of Transvaal, instead of a centre of hostile raids across the river. But when Trajan, some time after Dacia had submitted, had convinced himself in 103 and 104 that Decebalus and Dacia were not honest in their professions of peace and were secretly preparing for hostility, he determined on a war of conquest, and on carrying the Roman border across the river. A larger army was needed than for the first war. Trajan started from Rome. The first rendezvous was at the main port on the upper Adriatic, Ancona, where a beautiful memorial arch still testifies to Trajan's enlargement of its harbor, probably in view of this very need, though the work was not completed till a decade later. As only a part of the army needed to be carried from Italy—the bulk being formed of the legions stationed further north and west—the problem of taking them across the Adriatic was not arduous. In the sculptured historic scenes of the war on Trajan's column we see the scene of embarkation at the port, near the arch which, as at present, adjoins the quay: the whole topography of the scene in the relief fits into that of Ancona, including the temple on the heights. But where are the troops bound? One wild theory takes them on vessels as far as the Bosphorus. My own theory, in which I agree with Professor Bulic, is that Trajan carried the troops almost straight across to Salona, which was not only the nearest large port, but the central starting point for the main network of Dalmatian roads connecting both with the garrison camps and the valley of the Middle Danube, which Trajan wished to reach directly. For confirmation of this theory, it would be natural to look for some record of repairs on the Dalmatian military roads by Trajan in view of this march. We know how forehanded he was in this particular; how he had the great road along the Danube through the Iron Gates constructed in 100, a year before the first Dacian war, and how he set Apollodorus at work on the great bridge over the Danube in 101. So it is without surprise, but as a confirmation of my theory, that I see in the C. I. L. and in the Dalmatian *Bollettino* of Bulic, the inscribed milestones from this region that prove Trajan's restoration of the roads, one of them near Salona itself at Trau. Trajan's stay in Dalmatia and its connection with the Dacian campaign are shown in a multitude of ways: by buildings and engineering works like the aqueduct at Zara, by the monuments of soldiers and veterans scattered over the whole province, including those of men who did not belong to the corps regularly stationed in Dalmatia, but who took part in this campaign. Picking up the Pannonian and Mœsian legions on his way to the northeast; and appointing a rendezvous for the Germanic legions and the rest that were to come from the west, Trajan probably spent some time on this side of the Danube before crossing; and the triumphal monument at Adam-Klissi in the Dobrudscha shows how far toward the Bosphorus he descended. Whether in starting from Salona he took the more northern route via Burnum and Asseria, or the more southern route, by the Drin valley, I would not venture to suggest without further study of the region; but does not the memorial arch-gate at Asseria, though erected several years after, suggest that Trajan may have passed this way? In any case, there is cumulative circumstantial evidence in favor of the theory that Trajan selected some route through Dalmatia as the shortest and safest way of reaching his field of operations and that he had been preparing for this by putting the highways and ports in repair.

A. L. FROTHINGHAM.

Princeton, N. J.

NEWS FOR BIBLIOPHILES.

The library of Henry W. Poor will be offered by the Anderson Auction Company of this city next season. Mr. Poor has been buying first editions and rare books for fifteen years or more. He secured some of the most important items in the Bishop Hurst sale in 1905, notably Higden's "Polychronicon," printed by Caxton in 1482, which, though lacking some leaves, brought $1,400; and the "Catholicon" of Balbus de Janua, printed by Gutenberg in 1460, which though also imperfect, with fifty leaves from another edition, brought $710. He was the purchaser likewise of choice books from the McKee library, the most valuable being the first edition of the "Imitation of Christ," printed at the first press at Augsburg in 1471, for which he paid $1,600. There are Latin, French, and Oriental manuscripts, including a Bible on vellum dated 1425, Books of Hours, with miniatures, and the "Office de la Vierge," written by that famous calligrapher, N. Jarry, for Anne of Austria; eighty-five examples of the Aldine press, including Grolier's copy of the Livy; a number of the rarer Elzevirs; early English poetry and prose, including Allot's "England's Parnassus," 1600, Gawin Douglas's translation of the "Aeneid," 1553, and Chapman's "Iliad," 1611; Americana, including Smith's New York, 1757, Beverly's Virginia, 1705, and McCall's Georgia, 1812. Of modern authors, Mr. Poor brought together first editions and some presentation copies of Dickens, Thackeray, Tennyson, Coleridge, Rossetti, and Swinburne. Mr. Poor also has complete sets of the issues of the Kelmscott, Doves, Ashendene, and other private presses, a complete set of the Grolier Club publications, and of William Loring Andrews's books. For many years Mr. Poor has been a liberal supporter of the Club Bindery, and many of his modern books are in expensive bindings. He was a collector of early American bindings; and his copy of the "Self-Interpreting Bible," New York, 1792, bound by Thomas Allen, is one of the finest specimens of eighteenth century binding done in this country.

On May 21 and 22, the Anderson Auction Company sells a collection of books, part of them from the library of Edward H. Lowe of London. Several books with colored plates are included, among them Aiken's "National Sports of Great Britain," 1825; Westmacott's "English Spy," 1825-1826; Egan's "Life in London," 1821, and his "Life of an Actor," 1825. In early English literature there are the first folio Beaumont and Fletcher, 1647; Samuel Daniel's "Certaine Small Poems," 1605; D'Avenant's "Gondibert," 1651, on large paper; and first editions of four quarto plays by Massinger. The first editions include Hawthorne's "Fanshawe," 1828; Dickens's "Tale of Two Cities," 1859, in parts; a collected set of George Eliot; Longfellow's "Poems on Slavery," and a presentation copy of his translation of the "Coplas de Don Jorge Manrique"; Shelley's "Revolt of Islam," 1818, "Rosalind and Helen," 1819; "Prometheus Unbound," 1820, and "Posthumous Poems," 1824; and Thackeray's "Vanity Fair," 1848. A Greek manuscript of the Gospels written towards the end of the twelfth century, on 304 leaves of vellum, in a contemporary binding of red velvet, with silver ornaments, books with painted edges, a series of the so-called Goupil Monographs, and publications of the Bibliophile Society and the Grolier Club are other notable items.

A writer in the London *Athenæum* reports the discovery of an early prose work of Coleridge's unknown to bibliographers and apparently to the author's daughter and editor. The work is in the form of a letter, signed C. T. S.; it was elicited by an attack on Dr. E. L. Fox, a prominent member of the anti-ministerial party of Bristol. It is a pamphlet consisting of title-page (verso blank) and seven pages of letterpress. The title-page runs:—

> An | Answer | to | "A Letter | to | Edward Long Fox, M.D." | [Motto:] This is the Patriot's meed! | Be be as pure as is the Mountain Snow, | He shall not 'scape the wrongs of Calumny. | Bristol: | Sold by all the Booksellers. | Price Two-pence.

No date is given, but the pamphlet must have appeared soon after the publication (December 11, 1795) of the letter which called it forth. That this answer is the work of Coleridge is proved by internal evidence. Several of the sentences are found in the "Conciones ad Populum" and the *Watchman*.

Correspondence.

GRADUATE SCHOOLS AND LITERATURE.

TO THE EDITOR OF THE NATION:

SIR: There has been much painful criticism in your columns and elsewhere of the graduate work in our universities, particularly in literary fields. You have, for example, commented on the vicious influence of so-called German methods of scholarship, minute specialization, excessive emphasis upon "research," the worthlessness of the ordinary doctoral dissertation, and the inadequate training of the teacher. There is one point, however, which, I think, has not been sufficiently dwelt upon: The very best men do not enter upon graduate study at all; the next best drop out after a year's experiment; the mediocre men, at the end of two years; the most unfit survive and become doctors of philosophy, who go forth and reproduce their kind. The worst thing that can be said against the graduate school is, that it turns the best men away.

The best men for literary work are men of literary taste and aspiration. An outsider would naturally suppose the graduate school to be especially alluring to young men with a desire for a knowledge of literature, men with a keen sense of literary excellence, and gifted with original literary power. Such men appear every now and then in the small colleges of the East and the universities of the West. They conceive the notion that in the graduate school of some large Eastern university they shall come in contact with professors who are men of letters, with young men who are advanced and eager students of letters. They hope to enlarge their acquaintance with great men and great ideas, to expend great energy for great returns, to advance steadily to higher levels with a more liberal air and broader prospects. They are much surprised. They are bidden to provide themselves with an adding machine to count the occurrence of "fish" and "flesh" in the poetry of the fourteenth and fifteenth centuries; they are asked to hearken to the vowels and consonants singing together through the Dark Ages; they are invited to embrace the inspiring relics of the Gothic gospels; they are inducted into the physiology of the vocal organs; they are set astride an enchanted broomstick and sent chasing Cuchulinn through the Celtic moonshine. Seriously, there is nothing more pathetic in the world than the sight of the ardent and aspiring souls from Utah, Oregon, Texas, and the isles of the sea, who come up to the graduate school, and, in the faith and heart-ravishing impudence of little children asking for bread, receive a gold brick. So much for their hope of enlarging their acquaintance with great men and great ideas.

Their hope of training for creative literary work fares even worse. Their original literary power is the very thing that the graduate school should nourish. This, however, is the thing that the graduate school ignores, mocks, seeks to discourage. The puissant Darwinians, who have taken charge of the "higher" study of literature are suspicious of felicity in expression. They shun popularity as they do the devil. They wish the theses of their pupils to be what is technically called "scholarly," by which they mean true to the bare literal fact, objectively presented, unrelieved by humor or feeling, embanked and barricaded with notes. Every shaving of the workshop must be presented with the peg that the workshop produced; every mouse must be accompanied by the mountain that brought it forth. The student of real literary taste and power turns away rebuffed. He may go into journalism, become a critic of the play-house, or publishing-house, write for the magazines, or drift into the novel. Journalism and literature are the weaker because he has not had the training of a sound graduate school; the graduate school is the weaker because it has turned away a man of life and promise, a man who knew what he wanted, but could not get it.

There is no branch of higher education which has set to work more deliberately to cut off its own nose than English. There is no department of the graduate school which has greater opportunities, or makes less use of them. Whether one likes it or not, English literature is the student's main road to culture—the culture that Arnold meant: a knowledge of the best that has been thought and said in the world. The manifest opportunity of advanced English teachers and students is to add, not to the sum of human knowledge, but to the sum of human knowers; to the sum of those acquainted with the immortal works of men's minds in all ages of the world. We all lament the venal and weak-kneed journalism for which we are so celebrated. Do our English teachers make any concerted attempt to catch the embryo journalist, and stiffen his knees, and supply him with ideas too costly for even the multi-millionaire proprietor to purchase? Some of us are sorry that our literary critics have no standards; that our versifiers are so vapid, so destitute both of thought and of feeling; that our novelists are so sensational and so fond of launching theories that were exploded a hundred years ago. Do our English teachers make any concerted attempt to impregnate contemporary literature with the ideas of which they are, or ought to be, the custodians? Colleges all over the country are asking the graduate schools for teachers of English literature, for men capable of interesting graduates and undergraduates in the great ideas of Englishmen of the last four centuries. Do our graduate schools send them anything but pseudo-scientific specialists? There is a remarkable case of demand failing to create supply.

I sometimes think the best university that America ever had was that audacious school of philosophy which nestled under the hills of Concord. There for a little time were gathered together a few inadequately trained but great-souled and big-minded men, with a genuine hunger for the world's culture. There, old Bronson Alcott launched his imperfect flying-machine into the "intense inane." There, Emerson discoursed with Plato and Paul and Cæsar and Dante and Montaigne and Goethe—entered into their spirits and possessed them. There—strangest spectacle that ever insulted the practical sense of Yankee land—Thoreau sat down in his $30 shanty on Walden Pond, trimmed his evening lamp, and summoned around him Confucius and Zoroaster, Buddha and Zeno; rose in the morning and made his bread by recipe of Cato the Censor, and hoed his beans by the precepts of Sir Kenelm Digby and John Evelyn. There was a moment of intellectual expansion—men laid hold upon the poles of the earth. The wave of the brief bold renaissance of ideas that produced the transcendentalists produced Hawthorne, Lowell, and Whitman, the most original and powerful poetic force that America has liberated. For a little while, the cold skies of New England were glorious. But the giants of those days are no more. Montaigne gives way to Dr. Schwan and Dr. Behrens; Goethe to Professor Sievers; Plato to Dr. Braune, and the apostle Paul to the philologer of the same name. We produce a troop of profounder scholars who know that Emerson should be dismissed with a smile; he made Chaucer borrow of Lydgate and Caxton—that's all we need to know of him. Carlyle was a dodderer; for his etymology was faulty and his voice was strained—that's all we need to know of him. Arnold was a dabbler; for he spoke of the Celtic spirit from a very inadequate knowledge of Old Irish—that's all we need to know of him. We will have our revenge of them all; we will study Lydgate and the etymological dictionary and Old Irish, and let Emerson and Carlyle and Arnold lapse with all their heroes and their hobbies into dusty oblivion.

I should like to see inscribed over the door of every graduate student of literature that splendid sentiment of Lord Bacon: "I have taken all knowledge for my province." That seems to me the only proper province for the student to claim. When he becomes a teacher or a writer, let him narrow his domain as necessity and the shortness of his life require. One episode in the life of the Prince of Darkness has always roused my admiration: "He taketh him up into an exceedingly high mountain and sheweth him all the kingdoms of the world, and the glory of them." The question is whether we shall endeavor to go with our students up into a high mountain top to see the glory of the world, or whether we shall set them to burrowing in a gopher hole. It is clear that guides to the mountain top are not to be found on every corner; graduate schools are not producing many men who can point out the glory of the world. The scrupulous Darwinian will at once retort that the guides I am asking for are mere popular lecturers, flimsy generalizers, bellelettristic triflers. I admit that I think we need more generalizers, though it is not essential that they be flimsy generalizers. If talking in a comprehensive way about the great men and great ideas of the world is to be popular, then we do direfully need more popular men—more men like Lowell, Arnold, Leslie Stephen, John Morley. We need men with an eye for contours and altitudes, a sense for life in its fullness, an eye for the glory of the world. Such men must be recruited mainly from those whom the graduate schools are turning away uneducated into literary hackwork, journalism, and underfed literature.

STUART P. SHERMAN.

Urbana, Ill., May 1.

A TEMPEST IN A SWISS UNIVERSITY.

To the Editor of The Nation:

Sir: The Swiss universities and particularly the university of Lausanne, are much exercised over an attack that has been made upon them in the *Tägliche Rundschau* of Berlin. The questions at issue have a certain international bearing as between Germany and Switzerland. They concern university life in all countries and present some curious and amusing features. It seems that the German ministry of public instruction permits students from the Empire to spend their first three semesters at certain Swiss universities, these semesters being accepted as part of the time required for their degrees. The universities of French-speaking Switzerland are frequented by a large number of German students, who are attracted partly by the opportunity for learning the language.

But the spirit of Lausanne is proudly democratic. Socialism is treated here on its merits and is not under the ban either of law or of public opinion. And what is more, Russian students of both sexes, almost all of them revolutionists, are very numerous. At Lausanne, out of a total of about thirteen hundred in attendance, there are more than one hundred German subjects and about five hundred Russians, including the Poles. Many of the remainder are also foreigners. Besides the students, there are many Russian refugees in the cantons of Vaud and Geneva. Their respect for law has been weakened by the tyranny from which they have escaped, and several desperate crimes have been laid at their door. The murder of a bank clerk at Montreux and a robbery at Lausanne were apparently the work of Russians, not necessarily terrorists on the one hand nor revolutionists on the other, but simply bandits. The Russian students, who are an uncouth but earnest colony, in the main, have had to suffer in public opinion for the conduct of these malefactors. Of course the students are engaged in a revolutionary progaganda. That is naturally the business of their lives.

Independently of all this, there has been going on a personal quarrel between two German professors in the law-school on the one hand, and their colleagues, backed by the Swiss and some of the German law students, on the other. It began over fees, the German professors charging one of their colleagues with attracting students away from their courses and thus diminishing their revenues. These two professors, Herrn Kuhlenbeck and Van Vleuten, are in a sense treaty-professors, having been appointed subject to the approval of the German government in view of the permission granted to German students to study at Lausanne. Their courses, conducted in German, are indispensable for students expecting to be admitted finally to the legal profession in Germany.

The *Rundschau* two weeks ago stated that the patriotism of the German students in Switzerland, and especially at Lausanne, their monarchical principles, and their attachment to the theory of individualism were being undermined. Professors were teaching Socialism, the atmosphere was democratic, and the Russians were mingling freely with the Kaiser's subjects and corrupting them. Professors Kuhlenbeck and Van Vleuten were martyrs of German patriotism, doing all they could to oppose these evils. Thereupon the *Gazette de Lausanne* did not hesitate to charge these gentlemen with being the authors of the article in the *Rundschau*. They were accused of insubordination to the university authorities and with "cutting" their classes. The sad and amusing part of the whole affair has been the haste of the other law professors to disclaim all sympathy with the Russian students and all interest in Socialism. One of them is a grandson of Alexander Herzen, the famous revolutionist, yet he, too, turns his back and says "I never knew them."

German students come to Switzerland to be a little *dépaysés*. They need to be. Contact with the Russians, whom they dislike, would not hurt them. It is absurd and dangerous to require that a professor shall be an automaton, mentioning only such subjects as are specified in the title of his chair. If he be a man he will have political opinions, and if he be a man of originality and distinction his opinions will probably differ from those of the public. To grovel in the face of a little newspaper storm is to prove one's self unfit to serve as an example to the young. The incident further illustrates the exorbitant demands of German imperialism. It also shows the inconveniences of paying professors in proportion to the number of students who follow their courses.

Meanwhile a spirit of disorder pervades the university. The Swiss students have insulted Professor Kuhlenbeck. The German students are in despair over the interruption of their work. The "patriotism" of the Vaudois, rising to equal the narrowness of their German critics, may result in a serious loss of foreign patronage, upon which the university largely depends.

George McLean Harper.

Lausanne, Switzerland, May 1.

Notes.

This month the Oxford University Press will bring out "The Shakespeare Apocrypha," edited by C. F. Tucker Brooke, being a collection of fourteen plays which have been attributed to Shakespeare; a second volume of William Foster's "English Factories in India"; and a new edition of Stow's "Survey of London," edited with a long Introduction and notes by C. L. Kingsford.

The Doves Press will issue as its next publication Browning's "Men and Women," the first volume to be ready in June, the second in December, 250 copies on paper and twelve on vellum. The press is also beginning an edition of Shakespeare, each play forming a volume. The first, "Hamlet," will be issued in June, 1909.

E. P. Dutton & Co. announce as "in preparation" an account of the great voyage of exploration of the ship Gjöa, 1903-1907, in which Capt. Roald Amundsen sailed through the North West Passage. The book, bearing the name of the passage, is by Capt. Amundsen himself, and is said to be unusually vivacious and picturesque.

T. Fisher Unwin has a sixpenny edition of George Moore's "Evelyn Innes," largely rewritten by the author.

James MacLehose & Sons are publishing an Index to the papers relating to Scotland described or calendared in the Historical Manuscripts Commission Reports. It is compiled by Prof. C. Sanford Terry, and will be uniform in size with the Reports.

Maunsel & Co. of Dublin announce a collected edition of "The Irish Poems of Alfred Perceval Graves," in two volumes, the author himself having made the selection. As the early poems are out of print and the later lyrics are scattered in various inaccessible books of music, this reprint will be welcome.

In the April issue of the *American Journal of International Law* Prof. W. W. Willoughby, of Johns Hopkins, controverts the view set forth in Dr. James Brown Scott's leading paper in the October number, "The Legal Nature of International Law." Dr. Scott maintained that the rules which govern the relations of states are as properly to be termed laws as are enacted statutes. Professor Willoughby admits that when necessary to the adjudication of causes brought before them courts will apply the generally received principles of international law, but he refuses to concede that that law, like national law, constitutes a part of the municipal law of Great Britain and the United States. He maintains, that when laws are enforced, they first must have been impliedly adopted by the English or American state as a part of its municipal law, and that the legal force of such rules and principles must have been thus derived. The number recurs, at many points, to the Second Hague Conference. Laurence Oppenheim, author of the last completed great work on international law, sets forth his views of the task and method of this science. He is the first European contributor.

"The Life and Letters of Robert Browning," published by Mrs. Sutherland Orr in 1891, has now been thoroughly revised by Frederic G. Kenyon and issued by Houghton, Mifflin & Co. in a single volume. The greatest change has been necessitated by the publication of the correspondence between the poet and Elizabeth Barrett, and the whole chapter relating to their courtship and marriage has been rewritten by Mr. Kenyon. There are one or two other alterations of some magnitude, but for the most part the revision has been confined to correcting errors of statement in the light of recent information. The book remains substantially as Mrs. Orr left it.

We had occasion the other day to review an excellent edition of Coleridge's "Biographia Literaria," to which J. Shawcross furnished notes and an Introduction. As a complementary, though entirely independent, volume we have now from the Clarendon Press "Coleridge's Literary Criticism," with an Introduction by J. W. Mackail. Here the sections of the "Biographia" dealing with Wordsworth are given, followed by excerpts from his table talk and lectures. An index makes the book useful for reference. Professor Mackail's Introduction is in his usual graceful and full vein. It is a temptation to quote his metaphor—an old one newly turned—describing Wordsworth as a critic:

> He found his own life an unfathomable well into which, as his eye grew trained to see in darkness, he could plunge deeper and deeper down among the springs of life. From those depths—and they were inex-

haustible—he drew the water of which we may still drink, and which we shall not find in other vessels. But when he rose from them, it was with eyes that did not readily adjust themselves to the upper air; and that is why he so often reminds one of an owl in the daylight. The circling flight, the poise and swoop of the critic were not his.

For a professor of mathematics in Johns Hopkins University to become editor of a daily newspaper, the Baltimore *News*, and to serve in that position for thirteen years, makes up a novel experiment in journalism. "People and Problems: a Collection of Addresses and Editorials," by Fabian Franklin (Henry Holt & Co.), gives a slight record of it. To turn from the most exact of sciences to a notoriously inexact calling, must have meant something of a mental wrench for Professor Franklin; though, of course, his interest in public affairs was not born with his active editorship. His especial training is not obtruded in these pages. One editorial, acutely analyzing the vital statistics of Chicago, which the *Times-Herald* of that city declared to be a demonstration that "the average duration of life in this city has more than doubled during a single generation," reveals mathematical powers, but the chief impress of Professor Franklin's previous studies must be sought in that moderation, with that striving after the just and fair statement, which most strikes one in these collected writings. It requires a certain boldness in an editor to bring together in this way a selection from his chance utterances on public topics; while it is necessary to shoot at folly as it flies, it has to be remembered that the arrow usually disappears with the folly. An old English editor advised a younger newspaper writer to go back occasionally, when he felt stale and depressed, to things of his own. "If you find them pretty bad, you will be sure that you can write better than that. If they seem to you good, you will be encouraged to hope that you can do as well again." If anything like that is Professor Franklin's justification for printing this gleaning from his editorial work, we can only say that his encouragement from finding the writing good will be frequent.

Prof. G. H. Palmer's life of his wife, Alice Freeman Palmer (Houghton, Mifflin & Co.), is not a biography in the ordinary sense, but a panegyric, the intimate and lingering praise of a radiant woman by one who knew her best. "To leave the dead wholly dead is rude," he says, and the whole book is an effort to infuse into the cold eulogy of the world which knew Mrs. Palmer's outward activities a breath of warmer personal regret. It is not a long book; yet, in our estimation, a little too long for the *genre*. Some of Miss Freeman's letters, written while she was a student at Ann Arbor, some of the testimonials from her pupils at Wellesley, might have been omitted; other parts might have been shortened. The tone of panegyric, however legitimate, becomes cloying in a short time. The important question raised, and perhaps solved, by the book is the adjusting of two busy lives in marriage. Mrs. Palmer, while giving up the presidency of Wellesley to live with her husband in Cambridge, remained a woman of many outside interests. No doubt, it is for this reason that her biographer insists on her great abilities as a home-maker, in both the higher and the lower things. The most intimate, and, by a paradox, the least sentimental chapters are those which tell of the secluded summer life of Mr. and Mrs. Palmer in Boxford, and of their sabbatical years abroad. Travelling for them was a fine art by which change of scene meant only the making of brief and beautiful homes. To those who did not know Mrs. Palmer personally, these glimpses of hidden life at Paris and Venice and Tübingen will probably remain longest in memory; to those who counted themselves her friends the whole story will be like an intimate letter.

James MacLehose & Sons, publishers to the University of Glasgow (the Macmillan Co., agent), have issued in a style uniform with Capt. John Smith's "Travels" and William Lithgow's "Rare Adventures" Fynes Moryson's "Itinerary." The four handsomely printed volumes contain, according to the sub-title, "His Ten Yeeres Travell through the Twelve Dominions of Germany, Bohmerland, Sweitzerland, Netherland, Denmarke, Poland, Italy, Turky, France, England, Scotland, and Ireland." In the *Nation* of November 21, 1907, p. 470, we briefly noted the appearance of the first two volumes. Moryson, who was born in 1566, had that *Wanderlust* which seized so many of the Elizabethans—the mark of an inquiring spirit in those days when the world was still largely unknown and full of marvels. He writes:

> From my tender youth I had a great desire to see forraine countries. And having once begun this course, I could not see any man without emulation and a kind of vertuous envy, who had seene more Cities, Kingdomes, and Provinces, or more Courts of Princes, Kings, and Emperours then myselfe.

Prompted by this feeling, he spent ten years in roving, and in 1617 he published his book. It was first written in Latin and then translated into English. The result, it must be confessed, is not of interest to the general reader. Moryson's style is rather dry and monotonous. The work does not compare, for example, with Dampier's "Voyages." The story of the travels, occupies the first volume and a third of the second. Moryson sets down in detail the price of food, clothing, and general supplies, the fares paid by boat and stage, the cost of hiring horses, and the charges at the various inns. The last two-thirds of volume two and most of volume three are devoted to an account of the Rebellion in Ireland at the close of the sixteenth century and the beginning of the seventeenth. Throughout a good part of this struggle Moryson was secretary to Lord Mountjoy, the Lord Deputy. This history of the Rebellion is extremely arid—a succession of documents, letters from officers in the field to the authorities at London, and the replies, strung together on a slender and inadequate thread of narrative. The most interesting chapters, from the point of view of the general reader, are those of the fourth volume, in which Moryson discusses the apparel, the manners and customs, the laws, and the frame of government of the countries which he visited. His observations on the food, on the drinking habits—and those were the days of deep potations—on the organization of the family and the relations of husband and wife, and on punishments and the administration of law are often shrewd and entertaining. But even in these chapters much matter must be skipped. But to a student of the history of prices and of commerce all the volumes should be of value. The data furnished by Moryson throw a great deal of light on the cost of living in all grades of society in most of the countries of Europe, and the relative prices of a wide range of commodities. The work, we should say, would be an important addition to any library of economics.

"Present-day Japan," (Charles Scribner's Sons), by Augusta M. Campbell Davidson, is one of the books which touch lightly the surface of Japanese life, or if seriously attempting to enter the arcana of thought and inheritance, show little acquaintance with the historic monuments or the native literature except through translations. For this very reason, it may be, the work will be attractive to those who prefer to know about the Japan of to-day and do not care to probe phenomena for reasons. The text is based on letters written at the time and on the spot, and afterwards topically arranged. The numerous illustrations, reproduced from photographs, show taste in selection. As sympathy is itself a key to interpretation, many of the popular customs, festivals, and daily acts are made more intelligible to us by this educated English woman than by the average traveller who writes; and the national faiths, Shinto and Buddhism, are treated with more intelligence and discerning penetration. The beaten tracks were followed and two or three great cities, with Nikko, seem to have furnished the geographical basis for her thoughts and observations.

The contention set forth, from arguments based chiefly on history and archæology, that the Japanese have a rich inheritance from the same ethnic stock as the Indo-German peoples, receives some support from Kinza Hirai of Tokio. He has already written a work on "The Identity of the Japanese Language with the Aryan Languages." In an appendix (pp. 42) recently issued, he shows a comparative "Vocabulary of the Japanese and Aryan Languages." He has searched the Bengali and Assami, the Persian and Nepali grammars, and since he is already familiar with the Greek and Sanskrit, most of his comparisons of Japanese vocables are with words from these tongues. For the present, and until detailed grammatical evidence shall be presented, he is "content with this statement, that supposing the identification of our words with the Indo-European a mere chimerical fancy," his work shall serve "as suggestions and help to the memory of foreign words by association." While accepting Mr. Hirai's reserve in a matter where dogmatic statement is out of the question, we may say that his comparisons might have appeared somewhat more convincing if he had not adhered to a system of transliteration fixed nearly fifty years ago. Thus, *hito* (man) does not look or seem to sound like the Greek *phos*, *photes*, *photos*, but when printed *phŭto*, as it sounds in the Tokio dialect, seems to reveal kinship. *Kokoro*, which might properly be transliterated so as to resemble the Sanskrit and cognate forms, *e. g. hridaya*, means heart or core, or essence. *Dada* is Japanese for father, and *torii* for door or gate. Hirai guards his contention from the objection that the Japanese words unmistakably allied to Sanskrit might have been introduced through Buddhism, by showing that such words (which he excludes from his lists) do not number a score, the terminology of Japanese Buddhism being wholly, except the score or so noted above, of Chinese origin.

It was Professor Jowett's belief that scholars would better serve the world by executing and diffusing good translations of the classics than by the further prosecution of minute and over-specialized research. He accordingly left the royalties on his "Plato" in trust for the publication of a translation of Aristotle. In issuing the first instalment of such a translation the editors, J. A. Smith and W. D. Ross, announce that translators have already been secured for a large number of the works, and invite correspondence with regard to the remainder. The present volume, Part I., "The Parva Naturalia" (Henry Frowde), contains versions of the "De Sensu et Sensibili," the "De Memoria et Reminiscentia," the "De Somno," the "De Somniis," and the "De Divinatione per Somnium," by Prof. J. I. Beare, author of "Greek Theories of Elementary Cognition," reviewed in these columns August 9, 1906, p. 126; and versions of the "De Longitudine et Brevitate Vitæ," the "De Juventute et Senectute," the "De Vita et Morte," and the "De Respiratione," by Dr. Ross, author of an excellent edition of the "De Sensu et Memoria." The work is well done, and may be used with entire confidence by students of philosophy and the history of science. It is far more accurate than the interesting but, philologically speaking, amateurish book of Ogle, and silently corrects some errors which reviewers have pointed out in Dr. Ross's own previous interpretation of the "De Sensu et Memoria." The brief footnotes cite pertinent parallels from Plato and Aristotle, and in doubtful passages explain and defend the reading or rendering adopted. We shall follow with interest the progress of the undertaking, and shall especially welcome the "Metaphysics," a good English version of which is greatly needed.

Much material for the college study of religion is found in Prof. Frank Sargent Hoffman's "The Sphere of Religion" (G. P. Putnam's Sons). The author describes and summarizes the sacred books of ancient Babylonia, Egypt, and India, the Chinese classics, the religious literatures of Greece and Persia, the Tripitaka of Buddha, the Scriptures of the Hebrews, of Christianity and Islam, and devotes more than proportionate space to the "Book of Mormon," "Science and Health," and Madame Blavatsky's "Isis Unveiled." The remainder of the volume consists of miscellaneous essays on such topics as "The Relation of the Fine Arts to Religion," "What Has Religion to Do with Education?", and "The Church and the Right to Property." The mixed character of the volume, as neither on the one hand a scientific treatise on the history of religion, nor on the other a consecutive discussion of pressing religious problems, is likely to militate against its usefulness. Professor Hoffman's spirit is tolerant and progressive, but he covers such a variety of topics and so broad a field that issue may frequently be taken with him, in point both of fact and of opinion.

A recent number of the useful Crown Theological Library is "What is Religion?" by Prof. Wilhelm Bousset of Göttingen (G. P. Putnam's Sons). The volume is a translation by F. B. Low of eight popular lectures delivered by Professor Bousset in Hanover in 1903 and published under the title "Das Wesen der Religion, dargestellt in ihrer Geschichte." As thus indicated, the treatment is historical, not philosophical. An introductory chapter asserts the significance of religion as "the most powerful factor that affects the mental life of mankind," and defines its nature as, on the one side, a striving after life, and, on the other, a belief in divine beings and in the possibility of communion with them, manifesting itself in fear and trust. The remainder of the volume is occupied with brief sketches of the principal characteristics of the various historical forms of religion. A chapter on "The Future of Christianity," in which radical opinions on the more important doctrines of the Christian faith are maintained in brief paragraphs, closes the volume. The aim of the author was practical and apologetic, to assert the worth of religion as a subject of serious study, and to defend the proposition that Christianity, in the form taught by its founder, is the highest type of religion. As a rapid survey of the field of comparative religion and a concise and graphic description of the chief types of religion, Professor Bousset's lectures are of merit. The reader who finds the volume obscure or uninteresting must be dull indeed. But the English translation should have warned the reader, as is made clear in the German, that the book consists merely of popular lectures, brief introductions to the topics of which they treat, on which opinions are still much divided. In its English dress the book scarcely does justice to the author of the learned and exhaustive history of the Jewish religion in the age of the New Testament. The translator would have done better to retain the word Kultus instead of rendering it "worship," to employ Islam instead of "Islamism." He has retained the error of Professor Bousset's text, that every seventh or eighth man in the Roman empire at the opening of the Christian era was a Jew, an error corrected in the appendix of the original to 7 or 8 per cent.

"Unser Gottesglaube," a brochure by Prof. W. Bousset of Göttingen (Tübingen: J. C. B. Mohr), is an attempt to popularize, especially for those just being confirmed, the positive teachings of modern theology. It is the effort to show that this theology, far from being merely or chiefly destructive, really supplies more fully than the old, the spiritual needs of the average Christian. This volume is the latest in the series Religionsgeschichtliche Volksbücher.

A keen but conservative study of the personalities in the New Testament and chiefly of Jesus himself is furnished by J. H. Albert Fricke in his work, just issued, "Biblische Personen, Lebens- und Charakterbilder aus den vier Evangelien, insbesondere das Leben Jesu" (Halle: Buchhandlung des Waisenhauses).

Prof. C. F. Georg Heinrici, of the University of Leipzig, in his "Der literarische Charakter der neutestamentlichen Schriften" (Leipzig: Verlag der Dürrschen Buchhandlung) furnishes an analysis of the literary character of the New Testament books, and also searches out historically the factors that have made them what they are in form and content. He surveys the Jewish and Hellenistic worlds of thought, which are both reflected in the New Testament writings.

"Zwölf Festreden" is a collection of a dozen sermons preached on such festival occasions as Christmas, Easter, Ascension Day, and Pentecost, by Prof. J. Smend, of the University of Strassburg (Göttingen: Vandenhoeck & Ruprecht). This book belongs to the series Moderne Predigt-Bibliothek, edited by Prof. E. Rolffs. No better collection of the strictly modern type of pulpit oratory is published.

The small volume of F. von Schweinitz, entitled "Alte Wahrheit in neuer Beleuchtung" (Breslau: Gerhard Kaufmann), is a typical expression of the current tendency to reconcile modern thought with the fundamental teachings of Christianity. Its four parts discuss the questions: "Who Was Jesus?" "Is the Bible God's Word or Man's Word?" "Can Modern Thought Still Accept Baptism and the Lord's Supper?" "Can an Educated Man Still Believe in a Creator?" The position of the writer is conservative, but his work is not characterized throughout by the most accurate scholarship.

Pastor Johannes Thomae, of Querum, publishes in his recent work, "Die Absolutheit des Christentums" (Leipzig: A. Deichert), a discussion of the question as to the uniqueness of Christianity and its generic difference from other religions.

"Die religiösen Ideale der modernen Theologie" (Frankfurt: Moritz Diesterweg), a collection of four lectures, is an excellent summary of the positive teachings of advanced theological thought, and an effort to show that they meet the practical religious needs of the times. These lectures were delivered in Frankfurt-on-Main, by Oberlehrer H. Schuster, Prof. W. Bornemann, Pastor W. Veit, and Pastor E. Foerster. By an interesting coincidence, Prof. Carl Stange publishes at the same time (Leipzig: J. C. Hinrichs) a discourse originally delivered in Giessen on the same general subject. His thesis is that advanced theology cannot meet the religious needs of man. This brochure is entitled "Das Frömmigkeitsideal der modernen Theologie."

No. XXVIII. of the richly illustrated series of historical monographs published by Velhagen & Klasing, Bielefeld and Leipzig, under the title Monographien zur Weltgeschichte, and edited by Prof. E. Heyck, contains an excellent account of William of Orange and the great struggles for independence with which his name is linked. The book bears the title "Wilhelm von Oranien und die Entstehung der freien Niederlande." The editor of the series is also the author of this monograph.

The recent publication of the ninth volume of the "Weltgeschichte," edited, with the coöperation of leading specialists, by Dr. Hans F. Helmolt, completes this work. The characteristic feature is the arrangement of the material on the ethno-geographical principle. The Bibliographisches

Institut of Leipzig and Vienna is the publisher.

Ernst Seraphim, who in collaboration with A. Seraphim, wrote "Geschichte Liv-, Esth-, und Kurlands," has now published a "Baltische Geschichte im Grundris" (Reval: Franz Kluge). It covers the whole history of the German Baltic provinces, especially the struggle attending their Germanization, but only timidly touches the recent attempts at Russification.

With the publication of the second volume, Dr. Ernst Cassirer's "Das Erkenntnisproblem in der Philosophie und Wissenschaft der neueren Zeit" has reached its conclusion. The first volume appeared more than a twelvemonth ago. The entire work is characterized by a remarkable completeness, especially in the case of those philosophical writers who do not play a leading rôle. Naturally the historical side of the discussion is prominent. The arrangement of the material may be criticised as unsatisfactory (Berlin: Bruno Cassirer).

A further evidence of the revival of philosophical study in Germany is the new volume of Dr. Goswin Uphues, professor of philosophy in the University of Halle, entitled "Kant und seine Vorgänger: Was wir von ihnen lernen können" (Berlin: C. A. Schwetschke & Sohn). This is an historical study of the genesis and development of the Kantean philosophy, with a new interpretation of some points, *e. g.*, Kant's postulates of practical reason.

A new work on the early literatures of Iceland and Norway from the pen of Prof. Finnur Jónsson of the University of Copenhagen, needs no recommendation to those who know his earlier writings. But his recent book, "Den islandske Litteraturs Historie tilligemed den oldnorske" (Copenhagen: Gad, 453 pp.), is intended for a larger public than his critical history in three volumes which was published some time ago (1894-1902.) The author's aim is to provide a text-book for university students as well as a manual for the general reader; and in this double purpose he has succeeded. The volume contains a sketch of Icelandic literature from 1400 to the present time.

"Les Chouans" of Balzac is published in an attractive volume by George Bell & Sons, with illustrations by J. Blake Greene and a Preface by Gustave Lanson.

The large Patrologia Orientalis, with the Paris professors R. Graffin and F. Nau as editors, has begun the publication of the Greek portions as separate parts. The first is Prof. C. Wesseley's "Les plus anciens monuments du Christianisme écrits sur papyrus: textes grecs édités, traduits et commentés." This collection begins with five different formulas in which early Christians made a sworn denial of their faith; then come a series of letters written by Christians, most important among which is that of the Presbyter Psenosiris to the Presbyter Apollonios, in reference to the Christian woman Politike banished to an oasis on account of her faith. There are also a number of *inedita* from the Rainer collection in Vienna, fragments of gospels, canonical and non-canonical, including the finds of Grenfell and Hunt, and three photographic reproductions of specimens of these documents.

The death is announced, in his seventy-third year, of Archibald Hamilton Charteris, for thirty years professor of Biblical criticism at Edinburgh University, and since 1901 chaplain in ordinary to the King in Scotland. Dr. Charteris's best-known work is his "Life of Professor James Robertson"; he has also written "Canonicity," "The Christian Scripture," etc.

Theodor Ritter von Sickel, until 1892 professor of history at the University of Vienna and director of the Institut für österreichische Geschichte, has died at the age of eighty-one. Among his published works are "Monumenta graphica medii ævi ex archivis et bibliothecis imperii Austriaci collecta," "Beiträge zur Diplomatik," "Zur Geschichte des Konzils von Trient," "Über Kaiserurkunden in der Schweiz," and "Das Privilegium Ottos I. für die Römische Kirche."

STUDIES IN BIOGRAPHY.

The Life and Letters of George Bancroft. By M. A. DeWolfe Howe. 2 vols., pp. 294 and 364. New York: Charles Scribner's Sons. $4 net.

Mr. Bancroft died in Washington January 17, 1891, not long after he had entered upon his ninety-first year. He had been a conspicuous figure as a man of letters, as something of a politician in his early days, and later as our minister to England and to Germany. The task of writing the biography of so distinguished a personage has been committed to a competent hand. Mr. Howe has performed creditably a work of peculiar difficulty. He had to dispose of a large mass of material; but he has confined the narrative within proper limits. He evinces a fair degree of sympathy; and he has been wise enough to let Mr. Bancroft tell most of the story himself through the medium of letters. As a piece of bookmaking these volumes deserve no little commendation. They are handsomely printed and well indexed.

The work will interest numerous readers, chiefly those who are now past middle life; it is not likely to delight anybody. Many of these letters are addressed to his wife; but those written from Berlin, while he was minister, to the wife of his nephew, J. C. Bancroft Davis, then living in Washington, are by far the most interesting; for they describe his daily life and experiences at a period covering the Franco-Prussian War and the formation of the German Empire. Unless we except the correspondence of a very early date, the letters of Mr. Bancroft "smell of the lamp." No humor pervades them; there is no warmth, no sprightliness, and therefore no charm. The style is artificial. One suspects that these productions were elaborately penned in the expectation that some day they would reach the eye of the public. Of course, they reveal some things that are new and well worth knowing; but the Minister to Germany is not to be compared with Mrs. Bancroft as a letter writer.

What is disclosed in these volumes will not add greatly to Mr. Bancroft's reputation as an historian. The world knew that he was industrious, and that he took great pains to collect manuscripts, or copies from original manuscripts bearing upon the early history of the United States. Upon these treasures he drew copiously, not hesitating at times (such was the custom of the day), to make "free use of his materials." Says Mr. Howe:

> Bancroft does not appear to have invented public utterances by historic characters, but he did not scruple to compile from separate reports and offer as continuous deliverances the speeches ascribed to Pitt, Conway, Grenville, and Mansfield in the Parliament of 1766. (Vol. II., p. 323.)

We will not go so far as to charge Bancroft with misrepresenting facts, either wilfully or carelessly; but it is worthy of note that he managed to bring upon himself maledictions from the descendants of Schuyler, of Greene, and of Sullivan. Whatever may have been the truth, the more the controversy raged the less Bancroft was disposed to take back under fire anything that he had written. Yet, after all, he did a notable work in the field of history. For years it was the fashion to praise his "History of the United States." If the present writer may, however, advance an opinion it would be that "The History of the Formation of the Constitution of the United States," which was written when the author was in the neighborhood of eighty, is the best constructed and most valuable product of Mr. Bancroft's pen.

It was in society, in the company of brilliant men and women, that Mr. Bancroft achieved a marked success. To the last of his days he was extravagantly fond of the *salon*. He had buoyancy of spirit, and it is needless to say, an unlimited fund of information, so that he could both entertain, and he entertained, in a delightful manner. Mrs. Bancroft was one of the most charming of women. In the closing years of his life, the Bancroft house, at Washington, was very attractive, and people of distinction found their way there to be greeted with generous hospitality. Apparently he had early resolved to know intimately the best and foremost people in any country where he might be staying. With each leading statesman, distinguished man of letters or great scientist, Bancroft was pretty sure to become acquainted, and did time and circumstances permit, he would cultivate their friendship. Had his powers of observation been aided by a sounder judgment, his letters would have been enriched by a better estimate of the character and attainments of these distinguished men. As an illustration of what we mean, the following stricture which Bancroft passes upon his friend, Bismarck, will probably be regarded by the reader to be not at all deserved:

> He attends to great measures, neglects small things, takes no heed of them, and, by the way, for this he is not greater but less. Frederic the Great, Washington, Wellington neglected no detail; the greatest men are great in their attention to the minutest things no less than to general considerations. (Vol. II., p. 179.)

These words come from one who regarded James K. Polk as a great statesman—or, at least, publicly styled him such.

George Bancroft represented his country abroad with conspicuous credit. He was a thorough believer in democratic institutions, and he let that belief be known to all men. He laid deep and strong the foundation of our friendship with the German empire. His services to his country—such as the foundation of the Naval Academy at Annapolis, when for a brief period he was Secretary of the Navy under Polk—are worthy of remembrance. His work in the field of letters was persistent and extensive. For a period of fifty-one years he labored on the "History"; and, as a recent writer upon American literature remarks, "for all the diffuse floridity of his style, he is still a respectable authority." But Mr. Bancroft, so far as it is known, never coined a phrase or uttered an epigram, to be preserved in literature. His career has been tersely summed up by the late George S. Boutwell, who possessed an abundant stock of common sense, and could assign relative rank to his contemporaries with impartial judgment. He has said:

> Mr. Bancroft's long and successful career as a writer and diplomatist would seem to be evidence of the presence of qualities of a high order, and yet no one who was near him accepted that opinion. His conversation was not instructive, certainly not in later years; nor was he an original thinker upon any subject. ("Sixty Years in Public Affairs," Vol. II., p. 248.)

After reading Mr. Howe's book one finds little reason for disputing the justice of Gov. Boutwell's criticism. Mr. Howe does not allow himself to overpraise; he presents Bancroft much as he really was. Indeed, he writes as if devoid of affection for his subject. It is this circumstance which makes the reader finish the book with the feeling that while he has profited somewhat, he has nevertheless missed that keen enjoyment which a good biography should furnish.

Sir John A. Macdonald. By George R. Parkin. Toronto: Morang & Co.

Of the twenty-odd volumes so far issued in the Makers of Canada Series, this life of Macdonald stands easily among the best. Dr. Parkin has avoided many of the faults of earlier volumes, and has given us a thoroughly sane, reasonably impartial, and very readable biography of the Canadian statesman. One rises from his book with a clearer understanding of the personality of Macdonald, and of the dominant part he played in the creation and building up of the young Dominion. While admitting frankly Macdonald's faults as man and politician, Dr. Parkin believes that the verdict of history must be overwhelmingly in his favor. Macdonald himself acknowledged that time and again he had resorted to the questionable expedients of the practical politician; but there is no reason to believe that he did so from choice, or that he was actuated by narrow or selfish motives. He believed that a large section of the people could be won to the support of certain measures only by appeals to selfish instincts. That these measures were not merely irreproachable, but of vital importance, is proved by the fact that men of the mental and moral calibre of the late Principal Grant enthusiastically upheld his policy, though condemning his methods. What is more, Macdonald's great political opponents, George Brown and Alexander Mackenzie—to whom anything like a compromise in matters of political morality was impossible—failed in the task of leadership, while he succeeded. The success of the one and the failure of the others, we can now see, depended upon many other considerations than electioneering methods; but, be that as it may, Macdonald held to the theory that elections cannot be won by prayer.

When he entered political life, the British North American colonies were scattered, weak, filled with mutual distrust and jealousies; when he died in harness, nearly half a century later, he left a stable Dominion, stretching from ocean to ocean, rising steadily to national stature under a broad and well-balanced Constitution, and a far-sighted policy of industrial development. While, as Dr. Parkin says, "Many men and many forces contributed to that great end, it is scarcely an exaggeration to say that it was his personality which in 1867 made the confederation of British North America possible"; and to an even larger extent it was due to Macdonald's firm and unerring hand and far-seeing eye that the young confederation was piloted through the quicksands of earlier years, and placed upon the high road. No adequate estimate of Macdonald as a constructive statesman can leave out of account the peculiarly difficult and intricate circumstances under which his most effective work was carried out; and it is just here that this biography is most enlightening. Dr. Parkin brings out clearly the tangle of local, religious, and racial jealousies in the maritime colonies of Nova Scotia, New Brunswick, and Prince Edward Island, and in the two upper colonies, French-speaking Lower Canada and English-speaking Upper Canada, out of which had to be drawn a workable plan of confederation. The documentary evidence of Macdonald's share in the delicate negotiations will be found at length in Joseph Pope's Memoirs of Macdonald, and in the political history of the period; but they are nowhere more clearly or effectively summarized than in this new book.

Macdonald's extraordinary skill in the arts of a statesman and political leader was, perhaps, most strikingly shown in the final Conference at Westminster, which resulted in the British North America act—the Constitution of the Dominion. Dr. Parkin quotes Lord Blachford's tribute to the wariness and skill of this colonial statesman:

> Macdonald had to argue the question with the home government on a point on which the slightest divergence from the narrow line already agreed on in Canada was watched for—here by the French, and there by the English—as eager dogs watch a rat-hole; a snap on one side might have provoked a snap on the other, and put an end to the concord. He stated and argued the case with cool, ready fluency, while at the same time you saw that every word was measured, and that while he was making for a point ahead, he was never for a moment unconscious of the rocks among which he had to steer.

Moreover, one cannot easily forget the generous appreciation of Sir Wilfrid Laurier, when, in June, 1891, the death of his opponent was announced in the House of Commons. The substance of the speech will be found in Dr. Parkin's pages, but a few words may be quoted here as outlining the portrait, which Dr. Parkin has himself admirably drawn in detail:

> The fact that he could congregate together elements the most heterogeneous and blend them into one compact party, and to the end of his life keep them steadily under his hand, is, perhaps, altogether unprecedented. The fact that during all those years he retained unimpaired not only the confidence, but the devotion—the ardent devotion—and affection of his party, is evidence that, besides those higher qualities of statesmanship to which we were daily witnesses, he was also endowed with those inner, subtle, undefinable graces of soul which win and keep the hearts of men.

CURRENT FICTION.

Mr. Crewe's Career. By Winston Churchill. New York: The Macmillan Company.

> Democracy on the front of the stage before an applauding audience; performers absorbed in their parts, forgetting that the landlord has to be paid in money yet to be earned. Behind the stage the real play, the absorbing interest, the high stakes—occasional discreet laughter through the peep-hole when an actor makes an impassioned appeal to the gods. Democracy in front, the Feudal System, the Dukes and Earls behind—but in plain clothes; democracy in stars and spangles and trappings and insignia.

This is not the motto of Mr. Churchill's book, but a bit of fantastic description in connection with a political convention which has its incidental place in the narrative. It suggests pretty well, however, both the theme and the manner of the story as a whole. A State, unnamed, but easily identifiable, is under the political domination of a great railway. For many years this domination has been suffered by the people, partly through apathy, partly through an adroitly fostered State pride in the railway as a public institution. The Executive, the Legislature, the Railroad Commission, are all under the thumb of the president of the railroad, a citizen of New York. His representative at the front is the official counsel for the railroad, a man of blameless private reputation, who has come by degrees to look upon the service of his corporation as a kind of superior patriotism. Practically he is a corporation boss, with the vicious methods of his kind. The distribution of passes is the crude but efficient persuader by means of which the indifferent and the refractory are kept in line. In the meantime, as the years go by, though perfect understanding persists between the railway and the professional politicians, public sentiment is waking to the absurdity, at least, of the situation. The story begins at the moment when this sentiment of half-amused deprecation is turning into outraged opposition. One or two incidents chance to display in their nakedness the brutal methods of the corporation; and a leader appears in the nick of time. This leader is not really Mr. Crewe, to the spectacle of whose career we are ironically invited, but one Austen Vane, the son of the Hon. Hilary Vane, that famous generalissimo of the railway forces, in his character of chief counsel. This young man has always been regarded by his father as rather the black sheep; and the gradual reversal of positions between them, as the father comes to see the moral superiority of his son's point of view, is a study both interesting and painful.

Mr. Crewe, who becomes the open antagonist of the railway in the "gubernatorial contest," is, we say, a figure of irony. He is a millionaire, but this, we realize at once, has nothing to do with his character. Persons as busy, as knowing, as self-sufficient, are to be found on the peddler's cart, or behind the counter of the corner grocery. He is the jack-of-all-trades, raised by education and wealth to a large power; an egotist with an eye to the main chance as keen as that of any huckster on a smaller scale. His ardent, and in the end unsuccessful, pursuit of political office is an amusing and edifying spectacle; and it testifies to the good-humor of Mr. Churchill's portrayal, that one is left with rather a kindly feeling toward this undeniably blatant and offensive ass. But Mr. Crewe's career is not properly the theme of the book, as the author confesses by his prompt abandonment of him when he begins to be in the way. The character of Austen Vane is worthy of the deeper sympathy with which Mr. Churchill paints it; and his Victoria is altogether the most charming of his heroines. On the whole, it is clear that this popular novelist is growing in power. His style is still quite without distinction, and often slovenly. But his people are people (Humphrey Crewe being exaggerated as the irony of his conception demands), and the atmosphere in which they move is that of a ripened and really admirable humor.

Prisoners of Chance. By Randall Parrish. Chicago: A. C. McClurg & Co.

From the author of "Bob Hampton of Placer" it is natural to expect other thrilling Indian tales. His present hero, Geoffrey Benteen, Gentleman Adventurer, had for a father a free-trader and for mother a St. Augustine Spaniard. With the training of a borderman, a knowledge of tongues, and a frustrated love affair, he stands equipped for the utmost that may be achieved in wild adventure. Writing in 1817, he bears testimony to the clash that attended the transfer, forty-eight years before, of the Province of Louisiana from France to Spain. His first recorded effort is to help the husband of his lost love to escape from a Spanish warship; and his latest invelves him with strange tribes of sun worshippers, conjectured by his literary executor to be the last survivors of the Mound Builders.

The book, in a word, is nothing if not ample in reach and thorough-going in invention. Once within the temples of the Sun Cult, Mr. Parrish's right to imagine is as good as another's. In his exercise of that right he wanders free, but remains entertaining. He heaps up horrors, but does not wallow. And none of them that batten on the modern tale of exploit will feel otherwise than at home with the strange tongue that does duty in such cases —a kind of recognized Esperanto, used to express the semi-archaic, the chivalrous and the roystering, in several languages.

His First Leave. By L. Allen Harker. New York: Charles Scribner's Son's.

An agreeable little Anglo-Indian story beginning in good old style on the up-platform of an English railway and ending with a happy betrothal. The plot never thickens and the incidents barely link themselves into a chain; but they are made pleasant reading by the characterization, which is the strong point of the book. To our liking or otherwise are introduced half a dozen well-defined and even original characters. The heroine in particular is memorable as such a wholesome and attractive wheedler that one rather envies the old almshouse women whom she visited. "She don't never read to us," said one of these, "for which we thanks the Lard as made 'er." A good-for-naught or two cast the requisite shadows, but to portray kindness and honor seems more to this author's taste than to tarry long in the mire. The child pictures and the general attitude toward childhood are what might be expected from the creator of "Paul and Fiammetta."

The Forbidden Road. By Maria Albanesi. New York: The Cupples & Leon Co.

The discouraging thing about this kind of book is its deliberate commonplaceness. The young governess, plain, but with glorious eyes, of unknown but eminent parentage, dependent but really an heiress—what a dear old friend she is! The wicked baronet, the gay and selfish butterfly of society, the modest and deserving multi-millionaire—how could we do without them? How, at least, could we have done without them in the past? For it must be confessed they pall a little, they something smack. It is a trifle irritating that they should be trotted out periodically, as in the present instance, with that air of good-humored compliance. "This," the author seems to say, "is the kind of thing you want—and here you are." It is impossible to suppose that she takes the performance very seriously, but she is sure of respectable gate-money. If the thing were done a little worse, it might be disposed of as simply laughable, but it isn't quite that. It is rather regrettable, a bit of shoddy sufficiently smooth of surface to engage the eye, but with no real substance. The governess, the baronet, the millionaire, all have human attributes, and even an air of individuality; but they really are, and are meant to be, nothing more than wax figures designed with sufficient cunning to deceive the ignorant or indolent patron of the show. It is this kind of plausible sham which chiefly disheartens the well-disposed observer of our current fiction.

The Measure of the Rule. By Robert Barr. New York: D. Appleton & Co.

Mr. Barr's scheme seems to have been to take a school-boy's experiences and put them under a magnifying glass. His hero and sub-heroes are school adults and the arena where they study and struggle is a normal school for both sexes in a Western city on the shore of a great lake. The model schools attached to the normal system supply a small contingent of actual youth on whom the normal students practise their arts in equal terror of their pupils and their masters. These hours afford the sharpest thorns in the flesh of the "normalites," and are the occasion of their most virulent triumphs. The pranks and cabals of the ordinary school-boy are to those of Tom Prentiss, Sam McKurdy, and their mates, as moonlight unto sunlight. The most troublesome of all the many restrictions was that which forbade so much as a bow between the male and female contingents of the school. Hence the love-story which at last crowds out the school and takes itself quite seriously. The opening note of the book being frankly comic, the change of tone steals on one rather bewilderingly as aged school-boys, mature school-girls, eccentric professors, Mephistophelean principals, militant theologians come upon the stage to be gravely analyzed and to act like harlequins. One hardly knows whether to laugh or smile. Happily there is no occasion for weeping, unless over certain magnified non-natural horse-play. Though Tom's adventures lead him into odd places, they avoid the mire. The reader who does not find it rather solemn reading will probably call it exceedingly humorous.

Ancient Chronology. By Olaf A. Toffteen, Vol. I. Pp. xix. 302. University of Chicago Press. $2.50 net.

This, the first volume in a series entitled Researches in Biblical Archæology, issued under the auspices of the Oriental Society of the Western Theological Seminary, and edited by Dr. Toffteen, the professor of Semitic languages and Old Testament literature, deals with the chronology of Palestine, Assyria, Babylonia, and Egypt, down to 1050 B. C. Recent discoveries have led the author to attempt a reconstruction of the chronology, in which he differs in certain particulars from other scholars. The old Hebrew chronology he treats solely on the basis of the dates furnished by the Bible, without inquiring into their historical value; these questions he promises to take up in a succeeding volume, but in the present volume he appears to look upon the Biblical statements as trustworthy. The names of the patriarchs from Abraham down he regards as representing historical individuals, and he fixes the date of Abraham by summing up the figures in Genesis. The earlier list of Shem's descendants in Genesis xi. he takes to represent old Semitic dynasties. In the later Biblical accounts he recognizes the discrepancy in the two statements of the time from the Exodus to the building of Solomon's temple, a period given in I. Kings vi. 1 as 480 years, but according to the figures in Judges and Samuel, about 600 years. As explanation of this discrepancy he suggests that the narratives in Judges represent in part events that occurred before the conquest of Canaan by the Israelites; some of the judges, as Barak and Gideon, he thinks, have been placed erroneously after Joshua instead of before him. This explanation is hardly probable. There may have been Hebrew clans in Canaan before the time of Moses, but their history cannot be contained in our book of Judges; literary criticism requires us to regard this book as containing a history of affairs in Canaan after the time of Moses; and there is no difficulty in seeing that the editor of Kings has summed up the history in a round number of forties, while in Judges and Samuel a similar reckoning by forties is adopted, but in a looser way.

In Babylonian history Professor Toffteen's main divergence from the views of other scholars is in the dates of Sargon of Agade and Hammurabi. The date formerly assigned to Sargon, 3800 B. C., has been called in question by a number of Assyriologists, but no one except Dr. Toffteen has put him so late as 2550. This view the author bases partly on the form of cuneiform signs used in the inscriptions of Sargon, and partly on the fact that on the temple platform at Nippur bricks stamped with the name of Dungi of Ur (B. C. 2459-2401) appear immediately above those stamped with the names of Sargon and Naram-Sin. Obviously these are uncertain data on which to base a positive hypothesis. A similar remark applies to Dr. Toffteen's treatment of Hammurabi, whose reign he fixes at 2121-2066 B. C. Hammurabi is variously placed by recent scholars, and Professor Toffteen's date does not differ greatly from certain others, but his grounds are precarious. He relies mainly on Simplicius and Berossos. According to Simplicius, who for this relies on Porphyry, certain astronomical records in Babylonia were brought to Aristotle by an officer in Alexander's army—surely a source from which it is difficult to extract a minute chronology; and the figures of Berossos must be handled very carefully.

The connection between the civilizations of Babylonia and Egypt has lately occupied a number of scholars who are at variance among themselves. Professor Toffteen is convinced that he is able to give a simple and satisfactory statement of the early history. He adopts the view of Eduard Meyer that two distinct races, Semitic and Sumerian, existed in Babylonia as far back as the monuments go, and that a fusion took place between the two. The Sumerians, he says, came from the East about 3000 B. C. and constructed the cuneiform script from a preceding picture writing; this, in turn, had been invented or adopted by a people in Babylonia who were the ancestors of the Egyptians. Many facts, he holds, go to show that the cradle of Egyptian civilization was in the Euphrates valley, whence this people migrated to Egypt about 3350 B. C. The argument for the Babylonian origin of Egyptian civilization has been elaborated by Hommel and others, who rely chiefly on similarity in the divine names and in the methods of building, especially in the use of brick in the early monuments of Egypt. Whatever may be the explanation of this custom, the linguistic relations decidedly oppose the chronology given by Dr. Toffteen. The points of agreement between Egyptian and Semitic are now generally recognized, and it is held that the two linguistic families go back to a common ancestor; but the vast differences between the two show that their union, if they once formed a single group, must be referred to a very remote antiquity. In the present state of our knowledge it seems wise to avoid large generalizations in this field; the contentions for the priority of Egyptian or of Babylonian rest on evidence that cannot be regarded as conclusive. Nor has the time come to pronounce definitely on the original home of the Babylonians. Toffteen adopts the view of Ranke that the new Semitic settlers in Babylonia were nomads from the Arabian and Syrian plateaus, but he takes this settlement to be not, as Ranke holds, a gradual one, but the result of a well-organized migration. That Arabia was the cradle of the Semitic race is the view now regarded as probable by the majority of scholars, but it is impossible to give the chronological and other details of the various migrations. To elaborate a well-compacted theory out of the masses of facts that are coming to light every year is an alluring task, but this wealth of discoveries should rather teach caution. Toffteen goes over the Egyptian material as he has gone over the Babylonian, citing inscriptions and other authorities and constructing his chronology with the same definiteness. He regards the date of the accession of Menes, about 3285 B. C., as well assured, but he properly adds that new discoveries increase our knowledge of the early period almost daily.

In short, Dr. Toffteen's collection of material is useful, and the discussions are serious and vigorous, but it is constantly necessary to distinguish between the facts derived from good authorities and the author's reconstructions, which are often ingenious, but not always convincing.

Science.

THE MATHEMATICAL CONGRESS.

ROME, April 23.

The fourth International Congress of Mathematicians opened April 6 in the hall of the Horatii and the Curiatii at the Capitol in the presence of King Victor Emmanuele. Senator P. Blaserna, professor of mathematics and physics in the University of Rome, as president of the Accademia dei Lincei (the scientific society at whose invitation this congress met at Rome), presided. After the opening exercises, the congress met at the headquarters of the Accademia dei Lincei in the Corsini Palace and chose Senator Blaserna president; G. Castelnuovo, secretary; and V. Reina, treasurer, all professors in the University of Rome. Among the eleven vice-presidents was Prof. Simon Newcomb of Washington, the representative of the Smithsonian Institution and of the American Philosophical Society of Philadelphia.

At the general sessions papers were presented by Senator Vico Volterra, professor of mathematics and physics in the University of Rome, on "Mathematics in Italy in the Second Half of the Nineteenth Century"; by Professor Newcomb, "The History and Present Condition of the Theory of the Moon's Motion"; Prof. G. Mittag-Leffler of the University of Stockholm; A. R. Forsyth, Cambridge University; W. von Dyck, Munich; H. A. Lorentz, Leyden; G. Darboux, J. H. Poincaré, and E. Picard, of the Sorbonne; C. Stormer, Christiania; and G. Veronese, Padua. Professor Poincaré's address on the "Future of Mathematics" presented the underlying historical and philosophical laws essential to the advancement of science. It ought to be read by every student entering upon a scientific career, since, broadly interpreted, its general conclusions are equally applicable to all sciences.

The programme was divided into four sections: 1. Arithmetic, Algebra, and Analysis; 2. Geometry; 3. Mechanics, Physical Mathematics, and Geodesy, with a subsection of applied mathematics; 4. Philosophical, historical, and didactic subjects. Five of the papers given before these sections were by Americans, representatives of Harvard, the University of Chicago, and Teachers College of Columbia University, and one was by a professional actuary of New York. Prof. E. H. Moore of Chicago presided over the final meeting of the first section. Among the other Americans in attendance were professors of Amherst, Columbia, the Massachusetts Institute of Technology, Missouri, Nebraska, Northwestern, Wesleyan, and Williams, and representatives of the Coast and Geodetic Survey and of Princeton, Radcliffe, Vassar, and Yale. In planning the work of the fourth section, Professor Castelnuovo had given prominence to the programmes and methods of teaching mathematics in the secondary schools of the leading countries of Europe and in the United States. Nine papers on this subject reflected the increasing tendency to introduce into elementary courses conceptions of derivatives, ideas of motion and of functions, that is, the fundamental ideas of infinitesimal calculus, to emphasize the community of ideas in arithmetic, algebra, and geometry, and to develop a facility in making use of algebra and geometry later when solving the problems of mechanics and physics. The animated discussions which followed these papers led the congress, on motion of Professor Castelnuovo, to request Prof. Felix Klein of Göttingen, Prof. A. G. Greenhill of the Naval College at Woolwich, England, and Prof. H. Fehr of Geneva, the editor of *L'Enseignement Mathématique*, to appoint an international committee to study this subject and to report at the next congress. The foundation of such a committee, it should be added, was urged in a paper by Prof. D. E. Smith of Teachers College. The committee can hardly fail to pay attention also to the preparation of elementary teachers, a subject ably presented by Prof. Alberto Conti of Bologna, the editor of the *Bolletino di Matematica*.

A committee made up of Prof. M. Noether of Erlangen, Professor Poincaré, and Prof. C. Segre of Turin, appointed to award a prize consisting of a medal and a premium of 6,000 lire, offered by the Marchese G. B. Guccia of the University of Palermo, reported that none of the papers submitted met the requirement of essentially advancing present knowledge of algebraic curves or surfaces. As the conditions under which the prize was offered permitted award, in such a case, to the author of any works on this subject, published within the time set for the competition, this committee decided that eight monographs written by Francesco Severi of the University of Padua, a man still under thirty, were entitled to the prize.

The congress took action in favor of forming a new section devoted to engineering; of making the next congress (to be held in 1912 at Cambridge, England) a joint congress of mathematics and physics, and of supporting the Swiss Society of Naturalists in its effort to publish a complete edition of the works of Euler.

ALICE HAYES.

The Macmillan Company announces a new (fifth) edition of "Tolhausen's Technological Dictionary," in English, German, and French, revised and brought down to date by Louis Tolhausen.

"Wild Bees, Wasps, and Ants" (E. P. Dutton & Co.) is a popular study of the wild bees of England by Edward Saunders, an editor of the *Entomologists' Monthly Magazine* of London. The title covers wasps and ants, but they are here substantially negligible quantities. One with a taste for entomology, in search of a specialty well worth pursuing, could hardly do better than take up wild bees; and for that Mr. Saunders's little book would be a valuable help. Indeed, experienced entomologists in other orders or groups than bees, who care to know something of what their fellow-workers are doing, will find his book worth a place in the library. Mr. Saunders's facts are almost invariably trustworthy; but when he gives the age of Lord Avebury's famous old ant queen as seven years, he errs by nearly one half. These studies are printed in large, clear type and are illustrated with four good colored plates and a few cuts.

It would be hard to put together on one page notices of two nature-books so widely differing in tone and quality as Mr. Saunders's "Wild Bees" and John Burroughs's "Leaf and Tendril" (Houghton, Mifflin & Co.). Both are excellent books, written by men of high standing and ability; both treat the life of the fields around us, but they move in wholly different atmospheres. The one gives the impression of a walk through a well ordered museum; the other of a jaunt through the woods and meadows. One author knows minutely and specially; the other broadly and generally. Saunders is a systematic entomologist trained in structure and classification, but dealing largely and in a popular way with habits; Burroughs is a naturalist, more particularly a philosophic naturalist, perhaps a modern development of what a century ago was known as a natural philosopher. The title, "Leaf and Tendrils," is chosen, apparently, to disguise rather than indicate, the contents. It is simply the title of the first, and by no means most characteristic, chapter. But under whatever title, a book by Burroughs is sure of a warm welcome from many readers. As a country summer companion, it will set one to study nature with sharper and kindlier eyes; for Burroughs is not only a sympathetic but a close and accurate observer of nature. He thinks as well as sees, and has the rare faculty of setting others to thinking. Such writers as Thoreau and White of Selborne have no doubt largely moulded his mind and style. He shows great reverence for the Darwinian group of scientific men, Huxley, Wallace, Tyndal, Lubbock *et id genus omne*. But he also has a refreshing independence of great names, and does not hesitate to assert vigorously his own views, as for example on the orthodox scientific opinions about "protective colorings" (p. 54). This coloration he thinks "nature does not have much at heart" (p. 61), but "plays fast and loose with it" and everywhere "gives herself a free hand." He supports his opinions (which are by no means peculiar among younger naturalists) with a breadth of knowledge and accuracy of reasoning that make his chapter on "Gay Plumes and Dull" one of the best in the book. We may add that Mr. Burroughs's observations on natural history are of distinctly more value than his utterances on philosophy and religion.

The last volume of the Alembic Club Reprints, No. XVII., bears the imprint of the Alembic Club of Edinburgh, and also of the University of Chicago Press. It is larger than most of its predecessors, and contains the "Medico-physical Works" of John Mayow, who as early as 1668 in chemical matters relating to combustion, respiration, and other vital activities, anticipated opinions which were not established for another hundred years. The text is a translation of the five essays of the Oxford edition of 1674. The editors have noted the main facts of Mayow's life and a few explanations in a rather brief preface. The phraseology of this so closely resembles the Harveian oration of 1899 that the reader may safely infer that the editorial initials (A. C. B. and L. D.) belong in part to Prof. A. Crum Brown of Edinburgh. Judged by a few random comparisons with the original text, the translation is exact and good. but we are not quite in accord with the limitations as to explanations which the translators have set themselves. Most readers to whom chemistry before oxygen is an unfamiliar territory will need decidedly more help in finding their way. Nor is the comment as to the neglect of Mayow altogether just. Whatever the sins of the chemists may be, medical men, and particularly physiologists, may fairly claim that Mayow's merits have been freely and frequently—albeit inadequately—recognized by them. Haller notes his opinions not less than fourteen times in the third volume of the "Elementa" (1761), and various other writers (for example: Tiedemann, Bostock, Heidenhain, Zuntz in 1882, and Pembrey as recently as 1898) have shown themselves not altogether ignorant of Mayow's deserts. It may be added that B. W. Richardson in his "Asclepiad" (1887) recalled Mayow's services in an article which reappears in the collection published by his daughter in 1900 under the title "Disciples of Æsculapius."

Miss Agnes M. Clerke's "Popular History of Astronomy during the Nineteenth Century" (New York: The Macmillan Co.) is just from the press in a reissue of the fourth edition. No recent writer has covered the ground of the astronomy of the last century so well as the late Miss Clerke. Her acquaintance with the living, working investigators of the day and her study of the past of the science enabled her to catch a just perspective of astronomers and astronomical events. The "Popular History," first published in 1885, was revised from time to time by the author and brought forward in its story; the present issue notes events up to 1902.

Walter Gilman Berg, chief engineer of the Lehigh Valley Railroad, died in this city May 12. Born here in 1858, he studied engineering in Germany, and held important positions with several different railways. He was a member of various engineering societies, and a frequent contributor to the technical press. Among his books are: "Buildings and Structures of American Railroads" (1892), "American Railway Bridges and Buildings" (1898), "Strength of Timber" (1899), and "American Railway Shop Systems."

Dr. Franz von Leydig, professor at Tübingen in 1857 and from 1875 at Bonn, has died in his eighty-seventh year. He was the author of several works on the structure and development of the lower animals.

Drama.

The death of Ludovic Halévy, the dramatist and novelist, was announced in a dispatch from Paris, May 8. He was the son of Léon Halévy, who was himself a man of letters, and the nephew of the composer, Fromental Halévy. His grandfather was Hippolyte Le Bas, the architect. Born in 1834, he was educated in the College of Louis le Grand. For some years he held a position in the Colonial ministry, but the success of some of his earliest literary attempts, disinclined him for an administrative career; and he decided to devote himself entirely to the theatre. His first efforts were produced at the Bouffes-Parisiens, for which he wrote under the name of Jules Servières, but as soon as he was free from the duties of office, he wrote under his own name, soon forming a literary alliance with Henri Meilhac, whose name for many years was practically inseparable from his own. Their joint work was inspired by a delightful spirit of burlesque humor, which showed but small respect for the most dignified subjects or the most eminent persons. It made fun of both the military and civil administrations with an audacity and vivacity that won the hearts of Parisians, and later of the whole civilized world. Among their most memorable achievements were the librettos of Offenbach's "La Belle Hélène," "Orphée aux Enfers," "Barbe-Bleue," "La Grande Duchesse de Gerolstein," "La Vie parisienne," "La Périchole," and "Les Brigands," and many of the most successful comic operas of Le Coq and the "Carmen" of Bizet. Earlier in his career, M. Halévy, working with other collaborators, had contributed to the librettos of Bizet's "Le Docteur Miracle," the "Bataclan" of Offenbach, and other works long since forgotten. Of a widely different character was the exclusively dramatic work of Messrs. Halévy and Meilhac. This included almost every variety of stage production, from the lightest of vaudeville sketches to the brilliant comedy of intrigue or the serious five-act drama. Some were in rhymed couplets, others in blank verse, others in plain prose. Many of them have passed into oblivion, but nearly all enjoyed a considerable measure of temporary success. Among the more famous of these works may be mentioned "Froufrou," long associated with the names of Desclée and Sarah Bernhardt; "Le Réveillon," "La Petite marquise," "La Boule," "La Cigale," "Le Mari de la débutante," and "Le Roi Candaule." While thus occupied with the theatre Halévy gave further evidence of his fecundity by producing a long series of romances, novels, and historical studies, many of which are notable for their wit, their power of analysis, their keenness of observation, and delicacy of execution. Among them were "L'Invasion," "Mme. Cardinal," "Les Petites Cardinal," "Mariage d'amour," "L'Abbé Constantin"—of which charming tale there were numberless editions long before it was finally dramatized for the theatre to afford triumphs for Coquelin and others—"Deux mariages," "Les Trois coups de foudre," "Mon Camarade," and "Criquette." Of his later works the best known, perhaps, are "Princess" and "Karikari."

Emil Gött, the dramatist, is reported to have died at Freihurg im Breisgau. His best-known play is the "Verhotene Früchte," based on Cervantes. He has left a new completed play called "Mauserung."

Music.

Mozart. By Victor Wilder; translated by Louise Liehig. 2 vols. New York: Charles Scrihner's Sons. $3.50.

The most important life of Mozart is still that of Otto Jahn, who devoted twenty years of the most painstaking research to his task. His monumental work, in four volumes, appeared first in 1856-59, and has been translated into English. Invaluable for reference, it does not tempt one to continuous perusal. For that purpose it would be difficult to find among the many books on Mozart one more enticing than the "Mozart, l'homme et l'artiste," of Victor Wilder, published in Paris in 1880. It has certainly deserved the honor of a translation, even after this long interval, because of its lucid style and charm of narrative. There are reasons to think that the author of this book had not read Jahn; he was, however, familiar with the best of the sources on which Jahn himself built. A few ludicrous blunders appear, as when the writer accuses Daines Barrington of having stated gravely that Mozart was "a boy who measured seven feet in height," when as a matter of fact that lawyer had simply called the attention of the Royal Society to the fact that this eight-year-old boy's extraordinary musical talent surely made him as much worthy of that society's notice as if he were seven feet in height. Wilder also states that Mozart was "not impressed by Handel," because he re-arranged some of Handel's works, when as a matter of fact this very procedure attests his admiration.

The composers of our day who think themselves ill-used in the matter of copyright profits may derive some slight consolation from reading (pp. 190-192) how much worse off were their predecessors in Mozart's day. Attention may also be called to a paragraph which proves that Mozart was by no means as careless in the choice of librettos as he is supposed to have been. Once he wrote to his father: "I have just looked through more than a hundred, and I cannot find one to my satisfaction. Even the best would need endless remodelling."

The translator, who has done her work well, has appended a good index, and a bibliography of twenty-three pages, which is quite up-to-date, including, in fact, some things hardly worth mentioning.

European teachers of music agree with those of this country that while Americans are preëminent for beautiful singing voices, few students reach the high goal aimed at simply because of their great hurry. Anything that checks this fatal tendency and enforces the lesson of thoroughness must be welcomed. The systematic course, "The Art of Vocalization" (Oliver Ditson Co.), compiled and edited by Eduardo Marzo, belongs in this category. The exercises are selected from the works of Lahlache, Panofka, Randegger, Marchesi, and others, and are among the best of their kind. The style of singing taught is not that of modern dramatic opera—not the style of Wagner's "Tristan" or Verdi's "Otello"; yet these masters lost no opportunity to point out that before singers attempt their works they should have learned the breath control, the facility of execution, and the true legato which are taught by the art of vocalization.

The Bach Festival Choir of Montclair, N. J., will give its fourth annual festival May 22, 23, and 24. The principal work to be heard will be the great Mass in B minor. As this is too long for one performance, it will be divided, the Kyrie and the Gloria, comprising eleven numbers, being sung on Friday evening, while the thirteen numbers of the Credo, the Sanctus, Osanna, Benedictus, Agnus Dei, and Dona Nobis will be heard on Saturday evening. The soloists in the Mass will be Marie Kankil Zimmermann, Gertrude Stein Bailey, Nicholas Douty, and Carl E. Dufft. The final service on Sunday afternoon will include two of those magnificent motets of which Wagner said that they are incontestably the finest thing the world possesses in the way of unaccompanied vocal music. The conductor is Frank Taft.

Art.

THE ROYAL ACADEMY.

LONDON, May 2.

There is a familiar remark of the older Crome to his son: "My son, whatever you may paint, even if it is a pigsty, dignify it!" But it is worth quoting again at the Royal Academy, for it seems to give the reason for the failure of that exhibition year after year. It is because the exhibitors there do not "dignify" their work, do not give it distinction. In some ways, the standard is higher than it was. Many of the younger generation have been to Paris and have learned their trade in a good school; the influence of societies like the International, and the New English Art Club, in its most youthful days, is beginning to make itself felt. But no school, no influence, will give the artist the "little more" that is so much; and the commonness of outlook, the vulgarity of conception and selection are appalling. Perhaps one is more conscious of all this in the exhibition just opened, because there are so few things that rise above the general level of mediocrity.

The one huge pretentious painting is typical. It is a portrait group of The Council of the Royal Academy. 1907, by Sir Hubert von Herkomer. It contains portraits of many of the best known Academicians—Sargent, Poynter, Swan, David Murray, Seymour Lucas, Herkomer himself. But there could not be a better example of the commonplaceness of the Academic vision. The figures, all seated save two, straggle across the canvas anyhow, against a dull, ugly, empty red background; their attitudes exhibit the free-and-easiness of the smoking-room rather than the dignity of distinguished Academicians. One cannot help thinking of the groups Rembrandt and Hals, or even the lesser Dutchmen, painted, of the dignity they knew how to give to every figure, of the fine design they could get out of any such assemblage, and the splendid color. In Herkomer's canvas there is cleverness—the cleverness of the scene painter. With the first glimpse, you might easily mistake the figures in the pictures for the Academicians themselves in the flesh. There is realism if you will, but it is the realism that belongs to the stage.

Among the portrait painters even Mr. Sargent fails us. To be sure, his Duke and Duchess of Connaught are not mere puppets; they live on the canvas; but they have not the character, the vitality, of, for instance, so many Jews that Mr. Sargent has evidently had pleasure and amusement in painting. Nothing could be more masterly than the way the gold braid and red sash of the duke's uniform are put in, and the whole dress has a wonderfully harmonious richness of color. It is the head that is weak. Perhaps the fault is not Mr. Sargent's. It is his fault, however, that the head does not keep its place in the harmony; like the figures in Herkomer's group, it seems to come out of the canvas. There is more character in the portrait of the duchess, and, it may be, more truth than Sargent meant to express in the suggestion of weariness and boredom in her face. But here, too, his interest has been apparently greater in the dress, the gorgeous black satin gown and jewels, and in the accessories. Mr. Balfour, of whom Sargent shows a large full-length, has been scarcely more of an inspiration. There is surprisingly little individuality. Of course there is the skilful handling that no other Academician can rival; there is the knowledge, the vigor that makes it restful always to turn to Mr. Sargent after the ineptitude and feebleness of too many of the exhibitors; but more than one painter who paints less well, could have given a more sympathetic and subtle rendering of the man himself. The one successful, the one beautiful thing in the picture is the strip of carpet across the foreground. The way the pattern is suggested, and a fine austerity found in the rich color, is alone a delight. There is nothing better than this in the whole exhibition. J. J. Shannon too has been painting royalty. He contributes a portrait of Princess Patricia of Connaught, and he has also a large arrangement of the Marchioness of Salisbury and Lord David Cecil, and a group of Lady Tennant and her children, the three very gorgeous and regal in detail and accessories. Yet the nudes, in the two women grouped with a gay plump little boy of a Bacchus, in Infant Bacchus, show more color, a more sumptuous harmony, than the royal and fashionable portraits he has been recently exhibiting.

The subject pictures are few and far between. A large design by F. Brangwyn may have been painted to fill some definite wall space, though there is nothing in the catalogue to say so. Its object, anyway, as in all his paintings, is frankly decorative. The effect of color is charming. He knows how to get richness and quality out of his pigments. But it is all color and little else. He calls the picture The Return. After you have looked at it a little while vague shapes emerge and you discover there is something more in the design than the chance, kaleidoscopic mosaic or paint it at first seems. You see clouds in

BURLINGAME
PUBLIC
LIB.

the sky, you see a great cluster of grapes and fruit, you see a great brass bowl, and then arms and legs and heads, out of which, with the help of your imagination, you construct a number of figures and a procession, perhaps, returning from the vintage. Though color is a very important part of decoration, there must be line and form as well, and these essentials Mr. Brangwyn ignores more and more as time goes on. J. W. Waterhouse goes to the opposite extreme; one would thankfully have him borrow a touch of Mr. Brangwyn's vagueness. His nymphs and gods, or whatever they may be, are growing wearisome. Charles Sims, one of the new associates, is surprisingly fresh and fantastic in The Little Faun, who has strayed out of the same classic world where Mr. Waterhouse likes to wander, but to very different purpose; for he has leaped into the midst of an entirely modern luncheon party, whose cover is laid under the trees in springtime. I confess I do not quite know what it is all about, but the feeling of spring is in the gayety with which it is rendered, and, better still, there is good, sound work in the painting. The gayety and good work reappear in a fantastic little Fountain by the same artist. Another interesting picture is Campbell Taylor's Practice for the Ballet in 1830. Mr. Taylor's big canvas last year, bought for the Chantrey collection, appealed to me far less; it seemed in every way forced, affected, a reëcho. But the new canvas marks a decided advance. When you look at the low-toned interior with its quiet gray walls and serene, even light, and the little figures almost all so well enveloped in the atmosphere, you feel that the picture is one of the few in which there has been an effort to "dignify" the subject; the work is serious and refined.

The average of the landscapes is, on the whole, higher, but there are not many that call for special mention or description. George Clausen's work strikes me more than ever as having got scarcely beyond the experimental stage. In one sense an artist never should cease to experiment, for experiment means new themes and new solutions. But Mr. Clausen has never really mastered his first theme, has never got beyond his first experiment. In The Boy and the Man he gives chief importance to the figures though, again and again, he has proved that it is only when he subordinates his figures to the landscapes that he comes nearest success. Indeed, the figures seem quite apart from the rest of the picture. If Mr. Clausen lingers in experiment, Edward Stott threatens to lose himself in mannerism. In two of his small pictures I see little but the manner of expressing evening that has been growing upon him; in the third, The Flamingoes, there is such a delightful effect of color obtained from the grouping of the birds by the shores of a quiet pool that, after all, he may be already seeking new problems and new experiments, thus to save himself from falling into the pitfall of his own first successes. Alfred East has the great virtue of seeing, or wanting to see, things decoratively. He does all he can to arrange, to "dignify," to give distinction to the landscape before him. The drawback is that his pictures are often lacking in observation, while in his pre-occupation with form and arrangement he forgets light and atmosphere. His best picture this year is Outside the Bull-Ring, Algeciras, in which he suggests, though he does not realize, the play of Southern sunlight on the whitewashed wall of the ring, and fills the road leading to it with the color and movement of many figures. James Henry, Arthur Lemon, Bertram Priestman, Hughes Stanton, are others whose landscapes stand out from the mass of commonplace.

In the water-color room and the black-and-white room, there is little to detain one. The collection of sculpture has often been more distinguished in the past. Alfred Gilbert does not exhibit at all, and his absence is a serious loss. The small bronze groups by Frémiet, who has been made an honorary member of the Academy, bring a new note with them. George G. Frampton's recumbent figure for the tomb of the late Duke of Argyle has a certain solemnity and austerity, as well as a unity, that is the more striking when contrasted with the tomb of the late Marquis of Salisbury, by Goscombe John, where the head of the figure stretched out upon the tomb is so large in proportion that one seems to see nothing else. In Havard Thomas's marble bust, Portrait of a Lady, the modelling of the head is excellent, very delicately observed and felt, but the treatment of the drapery about the neck and bust is strangely awkward. Alfred Dunny's relief of Mrs. Craigie, for the memorial to be erected at University College here and also in America, is singularly characterless and ineffective. John M. Swan's bronze of Bacchus has the charm of all his smaller work. Here and there, the exhibits of a younger man—I might mention more especially the busts by Henry Poole—attract attention. But the sculpture, once the Academy's redeeming feature, is weaker than it has been for many years.

N. N.

John La Farge has been showing at his studio in this city two of his recent windows. One, based upon a Japanese motive and called The Peony in the Wind, has already been exhibited at Paris. It is one of the most characteristic and beautiful examples of the American method of leaded glass which Mr. La Farge originated. The other example is unique, partly because of the long time required for finishing it, and partly because of its extreme costliness. Although begun twenty years ago on the return of Mr. La Farge from the Far East, it has only lately been completed. Originally intended for the house of the late Secretary Hay, the panel was retained in the studio (another window being substituted), in order to work out the idea more thoroughly. The result is a masterpiece. The design of this Peacock and Peony window was suggested by a Chinese ivory of the Ming era, copied in its turn from a much earlier work. In the background, large color masses, dark purples and blues above, with a wonderful central passage of gray blue and lighter tones of broken green and lilac beneath, are relieved by the rich mellow and mysterious glow of flowers. The central motive, the bird, is built up within a leaded contour with the details fused in what seems a *cloisonné* technique; but the work is in reality infinitely more complicated, since not only thin copper wire fuses glass to glass, but platings of glass are fused to glass and other difficult processes are resorted to. Wedges of high illumination in amber and topaz shaded with purple define the wings; the plumage of the tail, superb in its mass and texture, has the sweep of a jewelled waterfall. Except for a ruby blaze and a spark or two of cardinal, there are no reds; and one may feel, as one experiences in seeing restorations of mediæval glass, how the slightest dissociation of hues in this magical work would break the spell. In the background, a large space of equable blue is the blue of night skies, or the suggested depth of the sea in a drawing by William Blake. The gold-greens of the leaves and buds have an elemental reality. Mr. La Farge is recording truth, and he reveals here his personal vision quite as completely as does his painting. In this respect the window is more than a marvel of original technique—and Mr. La Farge is the acknowledged master of glass in our epoch—and more than a document of research into color harmony. Yet on these grounds alone it is to be hoped that this unique and triumphant masterpiece, which sums up the artist's achievements in the medium, may find its permanent place in one of our public museums.

That very clever painter who needed so little to be a great one, yet so fatally lacked that little, Sir Thomas Lawrence, is the hero of the latest issue of the Newnes Art Library (New York: Frederick Warne & Co.). The text is of little importance, and it has been pointed out that two of the pictures reproduced are of doubtful, or more than doubtful, authenticity. The others give a fair idea of the ability and the weakness of their author.

"English Church Furniture," by J. C. Cox and Alfred Harvey (E. P. Dutton & Co.), the latest volume in the series, The Antiquary's Books, is completely English, and even Anglican, in character. It is a work of no great size or pretension, a simple octavo of 350 pages, in addition to an elaborate index, illustrated by small, rather old-fashioned wood-cuts, and thirty plates with half-tone pictures of fonts, stalls, misericords, dug-out chests, and carved pew-ends. The arrangement of the text and illustrations is strictly systematic. Chapter i. deals with the altar, and the accompanying rails and screens; chapter ii., with church plate, chalice and paten, cruets and flagons, and even the leather cases in which such plate is kept; chapter iii., with the piscina and the sedilia; and chapter iv., with choir-screens and rood-lofts. Thus the whole book, divided into thirteen chapters, offers a useful account of what one needs to know when visiting ancient churches, or when preparing to build and adorn a church. There is a pleasant mixture of archæology with modern criticism. The majority of readers will be attracted by the long chapter on fonts, which is adorned by photographs of admirable ancient examples. The chapter on church chests, based upon exhaustive studies, is also an excellent treatise. The first-named author, the Rev. Dr. Cox, is known as a writer on ecclesiastical archæology, but the book exhibits much feeling for antiquity other than that of the church traditions. The criticisms are unprejudiced, without bias of sect or theological faction. The pieces of the Jacobean period, for example, are treated with as fair a description and in as cool and critical a tone as are those of the earlier "ages of faith." Indeed, it might puzzle the reader to find out the exact position in ecclesiastical matters of the writers. They have been helped by a large number of able men, notably by Francis Bond, author of an important book on English Gothic architecture, and now engaged upon "a larger work that covers much the same ground" as the volume before us. The result is an intelligent guide-book valuable for any student of the subject.

Ars Sacra, a collection of twenty sheets to begin a new series issued by the Catholic house of Joseph Kösel, Munich, is confined to reproduction pictures of Christ. The explanatory letterpress, by Joseph Bernhart, is devoted chiefly to the interpretation of the portrait itself, and not to its painter or history. The bulk of the pictures are from older masters, the nineteenth century being represented only by two names. Another collection of nineteen portraits of Christ, called "Vom Heiland," constitutes a number in the series known as Kunst-Gaben in Heft-Form, issued by the Freie Lehrervereinigung für Kunstpflege. The editor is Wilhelm Steinhausen, the publisher Josef Scholz of Mainz. In this collection all the pictures but four are products of the nineteenth century.

The British Archæological School of Rome has been engaged for some time in preparing an elaborate catalogue of the Capitoline Museum, Rome, under the general editorship of H. Stuart Jones, the former director, with the coöperation of several English archæologists. The work, the publication of which will probably take place early next year, has involved the investigation of numerous archives; and as a result the ulterior provenances of many statues have been ascertained.

An exhibition of the art work of the schools in the United States will be held at the Museum of Natural History in this city, May 14 to 18. This exhibition will be forwarded to London for the Third International Congress on Art Education, August 3 to 8.

At the Catholic Club, No. 120 Central Park South, an exhibition of ecclesiastical art is open till May 16. Among the exhibitions at the dealers' galleries are etchings in color at Edward Brandus's till June 1, and old sporting prints at Knoedler's.

C. H. Read, keeper of British and mediæval antiquities at the British Museum, has been elected president of the Society of Antiquaries.

The popular artist, Fritz Werner, pupil of Meissonier, has died in Berlin, at the age of eighty-one.

RAISING PRICES ON REDUCED DEMAND

A conference of railway presidents to decide whether railway freight rates ought not to be increased, because business is bad and demand for transportation reduced by 25 per cent., is something which one might expect to find in a Gilbert and Sullivan opera; but such a meeting has actually been held in New York. The trunk line officials who discussed this extraordinary proposal last week, are said "not to have been entirely unanimous" and to have put off action "until after the Presidential election." This is more easily understood than the fact that such a proposition should have been discussed at all. One report was that the practical railway men objected vigorously, but that E. H. Harriman, who represented the Wall Street interest, applied all the pressure in his power. Other explanations have been circulated. The railways are under heavy running expenses; they have incurred large debts, and yet need more money for improvements and extensions; and the trade depression has cut down net earnings to less than three-fourths of what they were a year ago. If they can force the shipper to make good this difference by a 10 to 15 per cent. increase in freight rates, and if the shipper can then recoup himself by raising the price of his goods, the problem will be solved.

But this reasoning undertakes to establish too much. Probably there never was a merchant or manufacturer or transportation agent, confronted by a heavy shrinkage in demand for his goods or services, who would not have been glad to "average matters up" by raising prices against customers who still remained. He would, however, have laughed in the face of any one who suggested such an idea. That this plan, from a simple business point of view, is utterly unsound, no intelligent man will deny. If a railway can recoup its losses from trade depression by advancing prices, then so can any other industry in which fair play and honest competition prevail. On this supposition, the cotton mills, which lately met a 30 per cent. reduction in consumers' purchases by a 25 to 50 per cent. cut in prices, were victims of a delusion. What they should have done, in line with this new political economy and commercial practice, was to have marked up their prices a quarter or a half. Fall River and Providence will answer that such an experiment would have paralyzed the business. True, the steel manufacturers have thus far adopted a "stand-pat policy" and refused concessions; but the steel trade is not likely to continue this policy. Already the steel manufacturers have suffered; at the moment when the cotton trade is reporting improved demand and better business, the monthly production and consumption figures for iron and steel show a steady decline.

What, then, are we to say of the fact that, at least in a tentative way, last week's conference endorsed the plan of trying higher rates in the autumn? The railway men in private argue that they fear to make any cut in wages of employees—not alone because of the threats of labor unions, which they have defied before, and which, in the present slack traffic, they could defy again, but because of the attitude of the government, as indicated in an exceedingly ill-judged letter of President Roosevelt to the Interstate Commerce Commission, last February. In it he said of possible wage reductions by the railways:

> If the reduction in wages is due to natural causes, the loss of business being such that the burden should be, and is, equitably distributed between the capitalist and wage-worker, the public should know it. If it is caused by legislation, the public and Congress should know it, and if it is caused by misconduct in the financial and other operation of any railroad, then everybody should know it.

This manifesto created some embarrassment for the railroads, and in a double way. The first sentence hinted pretty definitely that dividends ought to be cut along with wages. In this suggestion—however unpleasant the process might be to the railways—a good part of the public would agree. But the closing sentence plainly held over the head of any wage-reducing railway the threat of an "investigation for misconduct."

This attitude of the President was unwarranted; because past misconduct cannot be alleged as a reason for not reducing wages in a time of depression and of greatly diminished earnings, any more than it could be urged as a reason for not reducing dividends. The question at issue is, whether a company's present earnings will or will not enable it to continue paying former dividends and former wages. If not, the fact that somebody mismanaged it in 1906 or 1901 or 1897 or 1873 has no relevance whatever.

It was reported in Wall Street, at the time of the above letter, that the President had expressed his willingness to see rates advanced. If this was true, his attitude is indefensible. Whatever may be said as to motives and inducements, plain common sense will show that the raising of rates under present conditions would be possible only through either monopoly or a combination as clearly in restraint of trade as were the railway undertakings which the Administration has brought into court. There is no intelligent railway official who would not admit that so violent an expedient as arbitrarily raising prices in the face of reduced demand would be surely disastrous to the company undertaking it, unless all competitors were bound by agreement to do the same. But if this were to be the case, what is the limit of the policy? Why stop with a 10 or 15 per cent. advance? Why not 50 per cent.? No wonder the mercantile organizations of the West have met the first rumors of this rate experiment with vigorous remonstrance. They ought to continue their protest until so inexcusable a manœuvre is finally blocked.

Just Ready. IN THE AMERICAN NATURE SERIES

N. L. Britton's North American Trees

By the Director-in-Chief of the N. Y. Botanical Garden. With the assistance of John A. Shafer, Custodian of the Museums of the N. Y. Botanical Garden. 775 illustrations. 8vo. $7.00 net; carriage extra.

Describes all kinds of trees known to grow independently of cultivation in North America north of the West Indies and Mexico, illustrating the characters of foliage, flowers, and fruit by drawings, with photographs of most species showing their general aspect and environment. Technical terms have been reduced to the minimum. The relationship of native and naturalized species to those of foreign parts, the useful products of trees, and their horticultural features are discussed. With keys for identification, glossary of botanical terms used, and a 29-page index.

V. L. Kellogg's American Insects

New revised edition, with a chapter on "Instincts, Reflexes, and Intelligence."

Covers the entire American insect world, including moths, butterflies, and beetles, to which separate volumes are often devoted. Probably the most valuable handbook of the subject. 812 figures, 11 colored plates. $5.00 net; carriage extra.

ALREADY ISSUED IN THE AMERICAN NATURE SERIES

C. W. Beebe's The Bird ITS FORM AND FUNCTION. $3.50 net.
D. S. Jordan's Fishes $6.00 net.
C. E. Waters's Ferns $3.00 net.
Dr. Curtis's Nature and Health $1.25 net.

Four Victorian Poets

A Study of

Clough—Arnold—Rossetti—Morris

With an Introduction on the Course of Poetry from 1822 to 1852

By STOPFORD A. BROOKE

Author of "Tennyson: His Art and Relation to Modern Life," "Studies in Poetry," etc.

8vo, $1.75 net.

"Mr. Stopford Brooke has the invaluable gift of seeing as a whole the poetry of an age and a succession of ages. Mr. Brooke realizes that personality and environment must be considered together and that the man must be in some direct or indirect way the product of his age, and that he in turn helps to mould it into its new form. . . . The work shows a broad and tolerant mind. . . . It is a book which it is a pleasure to read."—*London Daily News.*

The Nation.

NEW YORK, THURSDAY, MAY 21, 1908.

The Week.

Another move in the time-honored game of hoodwinking the country on the tariff. On Saturday both Houses took what is heralded as a "long step" toward revision by appointing the Finance Committee of the Senate and the Ways and Means Committee of the House to sit during the recess, and "employ the expert assistants necessary to provide for an intelligent revision of the tariff, and to report what further legislation is needed to obtain equitable treatment for agricultural and other products of the United States." In the first place, there could be no less effective way of getting at the root of the matter than having these two committees sit during a Presidential campaign, when their members want to be busy electioneering. These committees, moreover, know that all the wisdom they may accumulate will be disregarded if Congress itself takes a hand and the protected interests use their influence.

Secretary Taft has put an end to the hopes of those who have believed with Col. Goethals that the Panama Canal would be finished in seven years. The work of excavation will, he reports, be completed within three or four years, and there is no reason to doubt the correctness of this estimate. In the Culebra Cut, for instance, it is only a question of how many men and steam shovels can be put to work; after that it is easy enough to estimate the time required. But as to the rest of the work, the locks and the Gatun dam, the Secretary said: "I can't make a very good guess. We have no means of measuring the time required to construct them." So that the final question is not one of making the dirt fly, but of piling up the masonry and the concrete, and building the huge Gatun dam, often described as an "artificial mountain." Still another important masonry work, the control of the Chagres River at a point fully twenty-five miles from the line of the canal, Mr. Taft did not refer to in his interview. Yet work on it has just begun.

In these days of battleship worship it is refreshing to find hard-headed business men like the Committee on Interstate Commerce of the Manufacturers' Association protesting against the squandering of the national funds "in so lavish measure upon battleships and militarism." Naturally, says the committee, the country cannot hope for the improvement of its waterways and the preservation of its great natural resources if the Treasury is to devote its means chiefly to building non-productive engines of war. Moreover, one of our largest assets is the labor of our workingmen; and therefore the waste in maintaining 150,000 soldiers and sailors who do not produce a dollar that in turn creates other wealth, is a serious drain upon the country's strength. It would be an excellent thing if over the door of every school there could be displayed these words of the Manufacturers' Committee:

> It pays so much better to sell the foreigner our industrial product than to wage war with him that our investments ought to take the former rather than the latter direction. In the long run, commerce is a better naitonal defence than armaments, giving the country immeasurably more strength.

It was the omnibus public building bill, carrying $23,000,000, which President Roosevelt threatened to veto in case Congress refused him four battleships. His theory was that he could not countenance that extravagance, unless accompanied by another. But it was explained at the time by a Representative that he made the threat "under great provocation," and it can scarcely be expected to hold good in this era of grace, mercy, and peace, and let us all get together so as to elect Taft. If the President had ever been severely economical, he might well oppose such large appropriations—which are, of course, largely dictated by political considerations—at a time when heavy deficits are piling up. But, with all his versatility, he does not make a stand for public retrenchment.

Once more an effort is to be made to replace the desks of Representatives in the House with benches, cut down the space in the chamber by one-half, and see if debating will not be improved and the public business transacted with less confusion. A committee has made a report urging the change, and it is possible that the plan will at least be tried at the next session. There is less reason for giving each member a desk in the hall itself, now that the office-building is occupied, and each Representative has a room. And Chairman McCall certainly makes a powerful argument, in his report, for going over to something like the arrangement of the House of Commons. He shows how the vast size of the chamber, with the attendant noise and disorder, tends to develop the worst type of oratory, in which shouting takes the place of reason:

> The House of Representatives occupies the largest legislative hall in the world, and it is chiefly due to that fact that it is not the greatest legislative body in the world.

Minnesota Democrats have put forward Gov. Johnson on a platform which is slightly tinged with demagogy, and of which the chief plank is a vigorous attack upon tariff iniquities. With kind words for Mr. Bryan, the resolutions of the convention plainly implied that he could not be elected, while Gov. Johnson might be. This is a common opinion in the party. Nor can one fail to notice the difference in spirit between the advocates of Mr. Bryan and the champions of Gov. Johnson. The latter have the generous air of going into a fair and free contest, in which they express the hope that the best man may win. If Bryan is nominated, they say they will support him; but no one has been able to get Bryan to say that he would support Johnson. The idea which Mr. Bryan and his lieutenants seek to spread is that he has a great personal following which can be got to vote for no other candidate. Their question is: "How can any man win who is nominated over Bryan's dead body?" He might dissipate this malign impression by a single direct word, but apparently he has no intention of uttering it.

"Hughes is destroying the Republican organization in this State," said a Senator at Albany. This, however, was before the result in the Niagara Senatorial district was known. It could only have been in the confident expectation that the Governor would be defeated there, that the Senator added: "It is a question of self-preservation, and my idea is that we ought to destroy Hughes." For a destroyed Governor, Mr. Hughes looks uncommonly alive and triumphant. It was only a special election to fill a vacancy in the Senate, yet it was a most momentous and impressive event. The reason is that the Governor had ignored the professional politicians, openly defied the party bosses, told them to their face that they misrepresented popular sentiment and did not know their own business, and then flung himself boldly upon the people who unexpectedly sustained him by their votes. This result is a terrible facer to the machine politicians. They never dreamed of such a thing. The Governor's enemies were chuckling over the disaster which was about to befall him. "He thinks he can get on without us, does he? He calls us children, and says that we don't even understand how to get the people's votes, does he? Well, we'll show him." There was, in fact, every sign of a determination to make the special election the end of the Governor's campaign. The Republican organization in the district made no real exertion. The Democratic machine was active and well supplied with race-track money and exceedin hopeful. The betting in the Albany poolrooms was two to one against the Governor. Yet that perverse and misguided man came off victorious. Th machine vote and influence of both parties were against him, but the church people, the educated people, the decent people were with him and brought the machinations of the politicians to naught.

Yet the instinct of the petty bosses was right. Hughes is destroying many things that are necessary to their success or even existence. He is destroying their reputation for power. They have alleged that they are indispensable; the Governor has shown that an honest and courageous man can get on withc them. He is destroying their claim that they hold the voters in the hollow of their hand. He is destroying all their pretences of superior astuteness and ability to read aright the political signs of the times. At his first flaming appeal to the people direct, he has shown how hollow are their boasts and how easily brought to the ground are all their schemes. No wonder the litt! captains of fifty and captains of hundreds hate him. Like the Ephesian silversmiths, they cry out in affright when they see the Governor winning victories on the issue of bossism: "Sirs, ye know that by this craft we have our wealth!" But it is one thing to defy and destroy a selfish and wicked party machine, quite another to destroy a party which must live on ideas and inspirations. In this aspect, Gov. Hughes is the great invigorator of his party. H has displayed extraordinary capacity for quickening moral enthusiasm. He may know little about the politician's art but the gift of leadership is his. H knows how to mark out compelling issues, and then how to go to the people and win both acclaim and votes. And it is still true that Americans admire and will support a public servant of clear bravery fighting the battle of obedience to the law and public decency. Gov. Hughes has displayed that courage which the Prime Minister of England said the other day that the British people could not fail to recognize and uphold—"not the vainglorious courage which exhibits itself as a mere matter of histrionic display, but the courage which can face at all costs a great social problem, determined rather to sink the attempt to solve it than not attempt to solve it at all."

The Harvard authorities have just announced the appointment of several "Andover professors," as they are officially termed. These professors are primarily members of the faculty of Andover Theological Seminary; but now that the seminary moves to Cambridge and settles under the wing of Harvard, the professors thus designated receive appointments under the Harvard governing boards and are allowed, under certain restrictions, to offer courses which count toward the Harvard degree of bachelor of divinity. The arrangement is virtually an attempt to resuscitate the dying Andover Seminary. The plan was accepted with some misgiving on both sides; and predictions as to the outcome of the experiment would, course, be rash. Andover, at least, has little to lose, for the attendance had so dwindled that the institution was literally on the verge of dissolution. And, what is more serious, the decay of Andover is merely typical of the decline of theological seminaries throughout the country. In the May issue of the *American Journal of Psychology and Education*, David Spence Hill, a fellow in Clark University, has an article on "The Education and Problems of the Protestant Ministry." He gives some striking figures compiled from the United States Education Reports. From his several tables we cite the following figures which bear on our point:

	Students. 1893-1894.	1898-1899.	1903-1904.	Value of buildings and endowments.
Law	7,311	11,874	14,306	$3,911,800
Medicine	21,802	23,778	26,949	15,654,679
Theology	7,658	8,261	7,392	35,726,736

In short, the endowments for theological education are nearly twice as great as for legal and medical combined. While the number of students of law and medicine is growing steadily, even rapidly, the number of students of theology is falling. Into the much discussed causes of this decline we need not enter. The facts themselves, without further emphasis, are sufficiently eloquent.

Prof. Walter Augustus Wyckoff, who died at Princeton last Friday, was one of the first to give himself up to a first-hand investigation of our lower social strata, which many others have dug into since his time—few indeed with equal success. Ill health induced Mr. Wyckoff to undertake in 1891 a pedestrian trip across the continent, which from the beginning he determined to pay for by earning his way as a day laborer. In eighteen months he had reached San Francisco, though it was not until 1897-98 that he gave his experiences to the world in the two volumes of "The Workers." His books are marked by a depth of sincerity and breadth of understanding which are rare in the later writing on the subject.

The oppression of the Poles in East Prussia would appeal more effectively to the sympathies of the world if the Ruthenians of Galicia had not even a stronger complaint against the dominant Polish autocracy there. The recent assassination of the Polish Governor of Galicia, Count Alfred Potocki, by a young Ruthenian student is symptomatic of a state of unrest among the agricultural population to which several causes have contributed. There is, in the first place, the old hatred against the Polish ruling class, which, since the year 1867, when the Viennese government practically turned over Galicia to the Poles, has steadily pursued a process of reducing the Ruthenian masses to what is at present a state of practical helplessness. In 1867 the Ruthenians had 46 members in the Galician Diet; they now have only 21. In the Austrian Reichsrath they had 16 members in 1873; they have only 10 now. The Polish ascendency party has, of course, gone ahead with the traditional policy of making its language paramount in the courts and schools. Of fifty gymnasia, or secondary schools, in Galicia, forty-five are Polish and five Ruthenian. Added to the old Ruthene discontent, the last year has brought a period of economic distress. The prosperity of the country depends in considerable degree on remittances from the numerous Ruthene immigrants in the United States and Canada. The crisis which began last October put an end to this source of income, while Ruthenians by the tens of thousands have come back from America to compete in a restricted labor market.

Dr. Theodor Barth's withdrawal from the alliance of German Radicals—and he is joined by other prominent men who are bitterly opposed to the present "block policy" of their party—has brought forth many articles on the "tragedy of the Liberal situation," as Prof. Walther M. A. Schücking of Marburg has described it in a recent essay. For more than a decade past the Liberal forces have been breaking up into smaller and smaller groups. If Von Bülow had deliberately intended to split them still finer and weaken their influence, he could have laid no better trap than the one into which they walked to join Conservatives and Agrarians in giving him the majority he needs. The result has been furious dissension within the Radical camp. Devotees of principle have naturally assailed the unholy alliance which has even led to such a stultification of Liberal policy as voting for the discreditable anti-Polish measures. In return, the Liberals have not even received a decent mess of pottage; and as the Clerical Centre is as ready as ever to return to its old position of controlling the government, the Liberals may any day find themselves out in the cold with practically nothing to show for their abandonment of their time-honored position. It is certain that the reactionary Chancellor will snap his fingers at them the instant he can get the necessary votes elsewhere.

French and Spanish, united in a cordial *entente* for the pacific penetration of Morocco, came to blows last week at Casablanca. The official report describes the affair as a mere drunken brawl between a handful of soldiers on either side, which cannot possibly lead to complications between the two mandatory Powers; and this view, as far as it goes, is probably correct. At the same time, the encounter at Casablanca is symptomatic of a state of mutual discontent that has existed since the first occupation of that port. No Spanish troops have taken part in the campaign against the hinterland tribesmen, and even at Casablanca they were accused by their allies, unofficially of course, of failing to maintain adequate guard over the section of the town entrusted to them. At Madrid there has been continuous criticism of the conduct of the French government. At this moment, probably, Spain regrets her lukewarmness in the entire Moroccan enterprise. What seemed a formidable task at the beginning has turned out, on the whole, to be beset with less difficulty than was expected. The energetic campaign carried on by Gen. D'Amade has practically reduced the tribesmen in the west to submission. He has also inflicted several defeats on Mulai Hafid, whose cause is rapidly declining. The Sultan, Abdel-Aziz, is marching on Fez, which he will probably reoccupy without trouble. Once installed there, he will not be in a position to deny that it was the French who saved him. In that credit Spain cannot share.

France offers her annual contribution to the budget of vital statistics by another story of a steadily falling birthrate. The significant feature of the figures for 1907 is that, for the first time, the deaths exceed the births, the figures being 793,000 to 774,000. France's chronic problem has therefore become one not of a merely stationary population, but of one actually declining, and the old crumb of comfort that it was not France that was going back, but the other nations that are pressing unduly forward, will no longer suffice. In a way, good may come from the final swing of the pendulum to this side. The favorable margin between births and deaths has never been a broad one of recent years, but at least there was a margin, and the mind is willing to cling to little things, just as Mr. Churchill's election at Manchester by 8 votes instead of his defeat by 8 votes would have made little difference in essence, but a great difference in moral effect. Frenchmen may now be stimulated to greater efforts against depopulation. Whether prizes for large families and taxation of bachelors will do much good is doubtful; but the growing fight against alcoholism, with which depopulation is connected, should help, in common with other ameliorative social legislation.

Isolated events of seemingly minor importance, reported from Russia in the course of the last few weeks, may turn out to be the premonitory stirring of a renewed revolutionary activity. Of revolution, in the sense that Russia experienced it from 1905 to the summer of last year, there can be, of course, no question. By their own confession, the revolutionary elements are too greatly exhausted to attempt anything but a reorganization of their demoralized forces and to work out new theories of tactics and campaign. The recent attempt on the lives of government officials may be in the nature of an aftermath to the struggle a year ago, or the irresponsible acts of individuals who in this manner punctuate the more deliberate plans of the responsible leaders. It is in the prisons, however, that the results of the unsuccessful revolution are still working themselves out. In Kief, typhoid fever is killing the political prisoners by the hundreds. In other places strikes and mutinies among prisoners are answered with gun-fire. Twenty-nine were shot down last week in an attempt at escape at Ekaterinoslav, and as many were wounded. In the course of the Russian Easter festivities, one brief dispatch had it that 20,000 political prisoners had been liberated. Having seen no confirmation of the statement elsewhere, we doubt its authenticity. But whether 20,000 prisoners were released or remained in confinement, the report shows what tribute the revolution has exacted from its followers.

That the new Japan is still the old Japan is shown by the outcome of last Friday's Parliamentary elections. Complete returns are wanting, but there seems to be no doubt of a substantial victory for the Cabinet, which will face the new Parliament with an increased majority. And yet the conditions under which the Saionji Ministry went to the country were such as would have resulted in a political overturn anywhere in the West where the Parliamentary system is permitted to work without interference from the Executive. The financial policy of the Saionji Ministry, involving as it did a steadily rising scale of military and naval expenditure, took on additional unpopularity in a period of business depression. On this point the Cabinet had to meet the criticism not only of the regular Opposition under so stout a fighter as Count Okuma, but of certain of the Elder Statesmen. Nor was the Premier's foreign policy felt to have been extraordinarily successful. However pacific may be our relations with Japan, Count Okuma was in a position to argue that the government's policy with regard to events in San Francisco and the entire question of Japanese emigration had served to bring on something like a crisis, only to be followed by a decided backdown on the part of Japan. The Saionji Ministry has not been strongly entrenched. At one time, some weeks ago, it was on the point of resigning. Yet when the elections came, undoubtedly the Imperial influence made itself felt. The country understood that whatever errors the Cabinet might make, there was a guiding power behind it that could be trusted, and that on the whole it was best to avoid experiments with a new set of ministers.

The libel suit of John Murray, the publisher, against the London *Times* brought out testimony which shows one reason why the *Times* has been losing prestige. The *Times's* review criticised Mr. Murray for charging three guineas for a work which could be produced for ten shillings. A little later the *Times* published a letter, signed "Artifex," containing the following passage, on which the complaint for libel was based:

> Mr. Murray . . . has exploited the great personality of Queen Victoria for his own ends, and coined the national interest in her doings, for his own enrichment, into thirty-two pieces of silver, to be precise.

Mr. Murray proved that, for various causes which need not here be detailed, the book had been an extremely expensive one to produce, and that his profit on each set of three volumes had been only 2s. 3d. He also proved that in the *Times's* review the comment on the price was not written by the reviewer, but was inserted by the business manager of the *Times*, Moberly Bell. The letter signed "Artifex" was written in the *Times* office by H. E. Hooper, organizer of the London *Times* Book Club. It appeared, furthermore, that just before the book came out, Mr. Bell vainly tried to secure from Mr. Murray a large number of sets at a low price for the Book Club. There was a fair presumption, then, that Mr. Bell was trying to punish Mr. Murray for not forwarding the plans of the Book Club. This is the kind of transaction which has shaken confidence in the *Times*. It has been going into large ventures outside of its legitimate field as a newspaper; and it has used its editorial and news columns for the promotion of these enterprises. Its opinions have manifestly been shaped to the exigencies of the counting-room. In this case, the comment on a book was not a statement of unbiassed opinion, but was a libellous retort for Mr. Murray's refusal to accede to Mr. Bell's terms. It is not surprising that the verdict against the *Times* was $37,500.

BRYAN'S STRENGTH.

Efforts to prevent another nomination of Mr. Bryan by the Democratic Convention have been a series of "might have beens" and "too lates." The result of the Alabama primary of Monday is but one more illustration of this fact. Had the anti-Bryan fight in that State been begun three months ago, and pressed with vigor, the returns would have had a different color; and a genuine rallying of the South to the candidacy of Gov. Johnson might easily have followed. As it is, Bryan has received three-quarters of all the votes cast in Alabama, will undoubtedly get an instructed delegation from that State, and will continue his triumphant march throughout the entire South.

Looked at in any way, this is an extraordinary political phenomenon. For there is no mistaking the fact that the leading Southern Senators and Representatives are either lukewarm or hostile towards Bryan. So are the most influential Southern newspapers. Expressions of dislike for him personally, distrust of his policies, and despair of success under his leadership, could be quoted by the column from these [illegible] supposed to mould public opinion in the South. Yet Mr. Bryan has gone behind the official leaders and guides of his party, and shown that he commands a majority of the Democratic voters. And he has done this in other States, North and West, as well as in Alabama and the South. It is a remarkable demonstration of political strength. Whether we like it or not, we are bound to recognize it. Even if we distrust the man, we must admit that he has a wonderful hold upon the mass of his party. As it was said of the popularity of Dickens that it was a part of the total fact which critics had to explain, so the most convinced opponent of Bryan cannot deny his political strength, or escape the necessity of studying the secret of it.

Ordinary explanations go a certain way. Mr. Bryan has a political machine. He has devoted friends working for him, not without hope of reward; his campaign is well financed; he is a tireless and ready campaigner and adroit manager. But those things do not strike deep enough to account for all the facts before us. Above and beyond all these usual methods of winning political support, Mr. Bryan possesses certain qualities, and practises certain arts, which give him singular power with large bodies of our citizens. He is a tremendous advertiser, with a conspicuous moral attachment. We may think that this is cheap and vulgar, but there [illegible] We see it impressing and captivating thousands, and making Bryan stronger than Senators in their own States. We cannot shut our eyes to it or get away from it.

No man who tries to put away his prepossessions and dispassionately study Mr. Bryan as a political fact, can deny that he has won an access of power, of a certain sort, since 1896. This has been chiefly in evidence since his return from his foreign travels, two years ago. Since then he has been a frequent and admired speaker at religious gatherings. Before clerical associations and missionary boards, in churches and Young Men's Christian Associations, in schools and colleges, and on the lecture-platform, he has spoken on moral and religious themes with the greatest volubility and unction. He has stood up for all the virtues with fervor, and has been pitiless in exposing and denouncing all the vices. We have not had the pleasure of listening to his lecture, or sermon, on "The Prince of Peace," but those who have tell us that it is a perfect masterpiece of emotional goodness. It steals away the hearts of women and children, and leads the average father of a family to say, "Well, Bryan's a good man, after all. I guess I'll vote for him next time." Mr. Bryan himself has complacently remarked upon the difference between his standing with the clergy, now and twelve years ago. Then he was looked upon as a kind of bogey-man. The agitator, the innovator, the stirrer-up of class hatred inspired good people with fear. But to-day Bryan has changed all that. He is the friend of missionaries, the sympathetic reporter of the "forward movement" in China, the favorite orator at church gatherings. Moreover, he is a man of clean private life; does not drink or smoke—is, in a word, almost a Puritan. This counts enormously in the South, which is justly said to be the last refuge of Puritanism in this country. Against eloquence such as his, correct views of religion such as his, and a severe morality such as his, Southern enemies of Bryan will labor in vain to make a stand. The combination of qualities is overpowering.

We have said nothing of Mr. Bryan's policies, because they scarcely count in the present demonstration of his prestige. It is the man behind the policies who is sweeping everything before him in his party. Much has been said about President Roosevelt having drawn the fangs of Bryan's policies, by adopting most of them. People really can't work themselves up into a fright at them any more. But, putting that aside, it is a question whether Roosevelt has not also paved the way for Bryan as a moral exhorter. The time has been—or at least we fondly hope it has—when floods of talk by a Presidential candidate, combined with the itch for publicity, and a mania for saying the undisputed thing emphatically on all occasions, would have wearied the American people. But they have now had seven years of this *in excelsis*. They have seen one of the keenest advertisers, the most copious talkers, the most preachy of public men ever known, rise to unexampled power. How, then, can they be expected to despise in Bryan what they have applauded in Roosevelt? All the evidence goes to show that they do not, and that their appetite for harangues and "moral earnestness" has grown by what it has been feeding upon.

THE HEROIC UNEMPLOYED.

It has been said that the "man out of work" is a test of civilization. By this is meant that the ability to find employment for the margin of workers easily thrown out of their jobs by shifting industries or financial depression, is a proof of wise government. On those terms, we know of no government which can make large pretences to wisdom. But, however that may be, the man out of work is, in a very obvious way, a test of his country. He shows how well its citizens have been trained to meet temporary adversity with an equal mind. He may display, for himself and his class, high qualities which are an ornament and a safeguard for any nation. And we are free to say that, in our opinion, the bearing and conduct of our unemployed, during the past six months, have been such as to make Americans justly proud.

Estimates vary, but we suppose it is safe to say that at least 250,000 men have been out of work. Many more have been employed on part time. Yet the hardships and even suffering which this has entailed upon so many people in so many parts of the country have been met with a quiet determination and a patience which are worthy of all admiration. If any other country in the world could have equalled this display of endurance and hopefulness under great difficulties, we do not know where it is. There have been, it is true, certain demonstrations of the unemployed in Philadelphia and Chicago and other cities. The Socialists were plainly seeking to make of these a tail for their kite. But there was nowhere anything like the bitterness of feeling or danger of upheaval which would have marked such gatherings in Paris or Berlin or even in London. Only a few of the really unemployed—as distinct from the "work-shy"—took part in these parades and appeals to Mayors, and so on. The great majority were calmly facing their hard situation as best they could, and doing it with a lack of complaint or outcry which deserves the highest praise.

Of course, many of those out of work have had resources to draw upon to tide them over a temporary idleness. We understand that the records of savings banks show steady withdrawals of small sums by depositors who plainly need the money to live upon. One savings bank in Toledo actually went out of business because of the almost complete withdrawal of its funds by working-class depositors. It is clear that the workers did not use up all their wages in the prosperous years, but put something aside for sickness or bad times. But for such prudence, their plight to-day would be worse than it is; yet even so, no man likes to use up his reserve funds, and the uncomplaining way in which thousands of workingmen have been doing it, under compulsion, is one tribute more to the good stuff of citizenship in them.

The "mobility of labor" is an old abstraction of the economists, which is held in less respect to-day than formerly. Under modern conditions, it is not helpful to think of labor as so much water ready to flow instantly to the place where it is in demand. Laborers get fixed in one place, and at one kind of work, and many of them cannot move elsewhere and seek new jobs even if there were an opportunity. Yet there has been undoubtedly a good deal of transferring of labor from one point to another, and from one occupation to another. In this way, the pinch has been lessened or got over by some. In New England, for example, a great many mills are shut down or are running with a reduced force or on half-time. But we are informed that many of the idle operatives have sought work temporarily on farms. The New England farmer is finding it easier than ever before to get help. This is, of course, only a makeshift. The mill-hands are not, as a rule, fitted for farm labor, and they do not like it. When business revives, they will go back to their looms or their lathes; but meanwhile they have shown that they know how to turn their hands to other work and win a livelihood for the time being. A letter from an English carpenter in this country was recently printed in the *Manchester Guardian*, which illustrates the indomitable spirit and the adroitness with which workingmen are often able to shift for themselves in a period when employment is hard to find. He wrote:

> Myself and partner have left California—our trade in that State being practically at a standstill—and are tramping (hoboing, they call it here) east for Pittsburgh, a little pedestrian tour of some 3,000 miles. Of course, we shan't "ped." it all the way; we shall buy, beg, or steal rides on freight trains. We have little more cash at present than Johnson and Garrick had when they arrived in London, but we hope to pick up odd jobs on the way. I am writing this from Rawhide, Nev., where we have just concluded a two days' job.

There has been a wholesome tendency of late to magnify our "heroes of peace." In the really heroic fronting of misfortune by the thousands of the unemployed in the United States, an orator, wondering what he can talk about next Fourth of July, might find an inspiring theme. There has been in it all an amount of firm resolution, without complaint or clamor; an illustration of the endless charity of the poor for each other; a readiness of resource in trouble, and an unwavering confidence that things will come right in the end—all of which at once quicken faith in human nature and cause a patriotic thrill.

THE CASE OF COL. STEWART.

Not even the Brownsville affair brought out so clearly as has the case of Col. Stewart the President's conception of his relation to the law. In his letter to Senator Taliaferro, read in the Senate last week, he said that the appointment of a court of inquiry "is a matter purely within my discretion and judgment as commander-in-chief. I neither could nor would surrender the right to exercise such judgment." In other words, he has notified Congress that if it instructed him to give Col. Stewart the benefit of the court of inquiry to which that officer believes himself entitled, he, the President, would decline to obey. In the Brownsville matter, a similar intention to disregard any bill reinstating the soldiers of the Twenty-fifth Infantry, even if passed over his veto, was conveyed to Congress, but not so bluntly or openly. Obviously, were Congress disposed to take up the challenge, there might soon be a battle royal between Congress and the Executive, with the best precedent—that of Gen. Fitz-John Porter—on the side of the contention of Congress. A definite break or contest is not, however, likely. Senator Rayner consented to allow his resolution on Col. Stewart to go to the Military Affairs Committee, where, if Senator Warren, the Chairman, has his way, it is certain to rest. True, Senators Bacon and Foraker are quoted as saying that an opportunity will be made for Congress to express itself on this issue before March 4 next; but the tendency will be to have done with the business as quickly and quietly as possible. Nevertheless, it is worth while to consider the facts in detail, for the disposition of this extraordinary case, quite aside from its bearing on the relations of the President and Congress, is of great importance to the army.

Granting everything that may be alleged against the fitness of Col. Stewart to command men, the action taken by Mr. Roosevelt is properly described by Senator Rayner as that of a military despot; it establishes a precedent by means of which unscrupulous superior officers could hound a subordinate out of the army. The President wishes Col. Stewart to retire; the colonel declines to, and as the law does not permit of his enforced retirement until he reaches the age of sixty-two, the President has adopted the policy of driving him into exile at Fort Grant—in quarters without sanitary arrangements and in such ill-repair as not even to keep out wind and rain—thus to compel him to apply for retirement. An effort to change Col. Stewart's station to Florida was successful, until the Florida Congressmen protested that the building he was to occupy was needed by the Florida militia. Col. Stewart was again ordered to Fort Grant, and, as when he was first exiled, the orders were not given to the newspapers, as is usually done except in cases where military policy requires silence, but were carefully suppressed.

To say that this action has the approval of three general officers who served in the artillery is no defence. No person is more likely to become arrogant in high office than your military man, educated to believe that his word is law, at times even in a question of life and death. Had these officers been wise counsellors, they would have simply suggested that Col. Stewart be put on recruiting duty, or detailed to stay at home to await retirement, or to write a history of the Coast Artillery. When Lieut.-Gen. Arthur MacArthur a year ago expressed dislike for further active service, he was ordered to his home in Milwaukee to prepare his opinions on the Japanese army in Manchuria; and on this congenial duty he will continue until his retirement for age in 1909. A shrewd President would have taken a similar method in disposing of Col. Stewart. But no; the edict went forth that Col. Stewart was to be punished. In his letter to Senator Rayner, the President repeatedly uses the word "punishment" in speaking of the exile to Fort Grant.

The President also assails Col. Stewart in the following terms: "Grossly unfit," a "nuisance in the service," "incompetent and temperamentally unfit to exercise command," "impossible," "tyrannical," and "unjust"; a "scourge to those who are so unfortunate as to be under his control." Now, from time immemorial, when an officer is accused or reflected upon in either the English or American army, his right and privilege have been to demand a court of inquiry. This Col. Stewart has repeatedly asked for, under the 115th Article of War, which reads as follows:

> A court of inquiry, to examine into the nature of any transaction of, or accusation or imputation against, any officer or soldier, may be ordered by the President or by any commanding officer; but as courts of inquiry may be perverted to dishonorable purposes, and may be employed, in the hands of weak and envious commandants, as engines for the destruction of military merit, they shall never be ordered by any commanding officer, except upon a demand by the officer or soldier whose conduct is to be inquired of.

It is rare, indeed, that a gravely accused officer is denied this safeguard; it is unheard-of that, on top of this denial, he should be so severely denounced by one who is both his commander-in-chief and his judge.

Again, were the President to order Col. Stewart before a retiring board, under Section 1245 of the Revised Statutes, he could "wholly retire" him from the service; that is, discharge him without pension or extra pay, if the board found that he was "incapable of performing the duties of his office." Some persons think that this provision relates solely to physical incapacity; but that opinion is hardly tenable. Certainly, an officer who is denounced as "grossly unfit," "incompetent, and temperamentally unfit" could be wholly retired under this law, just as readily as the man rendered incapable by drink or drugs.

The worst side of the incident is, after all, the position in which it leaves the Chief Executive, who should display cool judgment, moderation of language, and inexorable devotion to justice.

THE GOVERNORS AT WASHINGTON.

From the three days' meeting of the Governors of the States with the President of the United States at Washington, both too much and too little was expected. It was to revolutionize the relations of the Federal and the State governments; and it was to be merely a dress parade. Out of it we were to get a permanent "House of Governors"; and out of it we were to get nothing but one laurel more for the Presidential brow. It was to be a powerful weapon against centralization; and it was also to be a club in the hand of the chief of centralizers. The reader paid his money and took his theory.

Now that the results are actually before us, however, the assembling of the Governors appears to be neither the ominous nor the insignificant thing that men said. Definite and immediate purposes led to their summoning; those purposes animated their debates and conclusions; and the affair passes into the records not as an epoch-making innovation, not as something that will change our form of government, or even lead to sweeping legislation, but merely as one of those devices to collect and express public opinion and to forward good causes, in which American political genius has always been fruitful. No one who has closely studied President Roosevelt can think of him as a profoundly constructive statesman. He does not brood long upon principles; he flings himself upon details. A political generalization means nothing to him; an individual political achievement, everything. So we may be very sure that Mr. Roosevelt had no notion of erecting a new political organism. Certain large plans that he has at heart could be, he felt, furthered by a conference with the executives of the States affected, and they were accordingly invited to be his guests. They came, they saw, they were conquered; and now they have gone their way. No permanent organization was effected; the resolutions simply reciting, on this point, that the President might ask them again, with "members of Congress and others," to a conference, "to *this end*"—namely, coöperation regarding "the conservation of our natural resources."

Here, then, is no Novum Organon of government to remove all our political ills. That is not the American way of going to work. We experiment, we tinker, we put on patches; but we do not make all new. The man with a panacea, we smile at; we have taken too many infallible remedies which have left us as ill as before. If a politician comes along with a skeleton-key to fit every lock, we distrust him. But when any one is able to provide a novel way of attacking old problems, can bring fresh forces to bear upon civic inertia, knows how to unite powerful influences in favor of a movement for the manifest public advantage, we listen to him, we thank him, we profit by him, we make use of the new instrument he offers us until it is worn out, when we try again with some other tool.

It is praise enough for President Roosevelt that he has succeeded, by his recourse to a gathering of the Governors, in giving a new impetus to the study and settlement of important national questions. They will not appear again quite the same. He has given the country a new way of looking at these problems. When discussion arises hereafter, or laws are proposed, concerning the preservation and care of forests, soil, mines, waterways, those who oppose action or legislation will have to be more careful, as men who now know that a great body of educated opinion and political influence has been evoked in favor of checking the reckless and wanton exhaustion of the gifts with which nature has so richly endowed our land. For this, we all owe the President sincere acknowledgments. He has never appeared more statesmanlike than in looking anxiously to the physical future of the country; and in so easily and naturally obtaining the assistance of the Governors, Mr. Roosevelt has given the whole cause added momentum. That, we have no reason to doubt, was his sole object.

The legal and political obstacles remain precisely what they were. Mr. Roosevelt gained much applause from the not too critical Governors, for his definition of the "scope" of Federal and of State powers, respectively:

> Where the policy can be carried out best by the State, it ought to be by the State. Where it can be best carried out by the nation, then the nation should enforce it.

But this does not really get us forward an inch. What is "best"? That is the whole question. And as we see by the sharp controversy between Congress and the President over the right of the Federal government to exact payment for building a dam in a navigable river within a State, the practical issue is not at all cleared up by any such "definition" as Mr. Roosevelt made. The Governors and the experts depart, but still stands the old difficulty of reconciling the recklessness of the pioneer and the greed of the exploiter, with the ultimate good of the commonwealth.

ASIA'S FOURTH ESTATE.

From Peking it is reported that the Chinese government has published a press law, the severity of which makes it tantamount to the establishment of a strict censorship. Restrictive action of a thorough kind has been urged upon the government by the European element in China, which has looked with apprehension upon the exuberance of the young Chinese editor, and by Japan, whom the new journalism has made its particular object of attack. It is doubtful, however, if the Europeans at Shanghai, Hongkong, Macao, and elsewhere expected a law which should prohibit the publication of "certain legal proceedings, matters relating to diplomatic, army, and navy affairs, secret memorials or decrees, anything reflecting on the throne or calculated to disturb the order and stability of the government, or tending to lower the moral standard of the people." What is left for the Chinese newspaper writer to deal with, except the weather, floods on the Yangtse-Kiang, and an occasional speech of the German Emperor, is hard to say. But, fortunately, China's government has carried to a high point the art of framing ordinances as horrendous as the dragon god himself, yet as harmless as a new-born child. In spite of the rules prohibiting him from dealing with almost everything, we may be sure that the Delane or Greeley of Shanghai will hesitate at almost nothing.

The development of the vernacular press in China was recently described by a correspondent of the Paris *Temps*. The oldest Chinese newspaper, the official gazette at Peking, goes back, of course, to an age that makes the London *Times* an infant—some nine hundred years, in fact. Presumably, it announced in 1215 the advent of Genghis Khan, who, with a large number of Mongol followers, had "decided to make his home in our beautiful and thriving city"; and sixty years later chronicled the arrival of "the popular Venetian commercial traveller, Marco Polo, who is at the Hotel of the Seven Vermilion Paroquets, with a superior line of goods from Bokhara and Samarkand." But Peking's solitary official gazette continues to be solitary and official; that is, without interest or circulation. The journalism which the Chinese government has set itself to muzzle is much younger. It is four years old or less, according to our French authority, and it had its birth in the upheaval of national spirit that followed the outbreak of the Russo-Japanese war. So now there are in the large coast towns "dozens" of dailies, written in the language of the common people, and to them appealing. The editors are for the most part young Chinese students who learned so much of the journalist's trade as could be learned in Japan. The number of their readers is not to be sniffed at. Circulations of 10,000 or 15,000 can be properly called very large in a country where every copy has its dozens of readers, and the printed message is further disseminated by word of mouth. The Chinese, with their highly developed social instincts and their fine garrulity, make an admirable newspaper clientéle; and the Chinese editor has not failed to give his public what it wants in the way of news, reserving to himself, however, the right to shape news as well as editorial so as to direct public thought towards the one goal of "China for the Chinese."

What, then, do the various Chinese papers print? According to our writer in the *Temps*, nearly everything—political news and gossip, personal news, sensation, fabrication, scandal, and highly patriotic editorials. The Empress is said to be a devoted reader of the Peking newspapers, from which she finds out things she does not know concerning the high dignitaries who dwell about her person. In the same way, Alexander II. of Russia was a close reader of Alexander Herzen's revolutionary newspaper, the *Bell*, the circulation of which was prohibited in Russia. Chinese politicians, like their kind all over the world, have been quite ready to furnish the press with "inside" information, and Peking newspapers have to their credit an "exposé" leading to the punishment of corrupt officials. Finally, the new Chinese newspaper follows its European model in its attention to belles-lettres, especially fiction. The national fondness for story-telling makes the serial, or *feuilleton*, probably the most popular feature even of the daily press.

Censorship, in form at least, was, of course, bound to come. The hot-headed journalist, wielding a weapon that is still delightfully new, is likely to indulge in a good deal of unnecessary brandishing and slashing. On a population unused to be appealed to as the ultimate tribunal, the effect is often disturbing. The commercial boycott, first against the United States and at present against Japan, the agitation against the further granting of railway concessions to foreigners, the preaching of a general anti-foreign policy, have been the work largely of the vernacular newspapers. So in India the activity of the new national press is regarded by many as responsible for the condition of serious unrest with which Great Britain is confronted. In China and India both, conservative opinion is inclined to characterize press agitation as the empty utterance of irresponsible and half-educated youths. Against their supposedly idle exuberance is placed the welfare and content of the "silent masses." Yet that is an ancient plea which is hardly convincing. It is from among the silent masses that the blabbers and the shouters appear, and it is the inarticulate demands of the silent Chinese or Indian masses which find expression in their violent young newspapers.

PARIS BOOK NOTES.

PARIS, May 5.

It is a pleasure to chronicle the appearance of two volumes, one on top of the other, like "Maurin des Maures" and "L'Illustre Maurin," by Jean Aicard. This author is now sixty years old; and ever since the crowning of his poems of Provence by the French Academy thirty-four years ago, he has always been on the point of becoming one of the acknowledged great writers of France. These two books, completing one hero, must be his final triple appeal—to posterity, to his contemporaries, and to the French Academy, which has taken into consideration his claims for admission among its Immortals for no one remembers how many past elections. Maurin is obviously the rival of that other hero of Provence—Alphonse Daudet's Tartarin, whom all the world loves. It is not necessary that Maurin should prove a best-seller; even Tartarin was not that. But if Maurin, with his hundred and nine adventures and love stories, filled with the hot sun and frank, laughing eyes, and irresistible palaver of the South, finds only fit audience of a few, each delighted reader passing him on, as with Daudet, to two more, then Jean Aicard will at last slip into the literary seat which every one expected for him long ago.

Georges Rivollet, a legal functionary in that public figure-auditing tribunal, the Cour des Comptes, celebrated his fiftieth year by an "Alkestis" in French heroic verse which was very nearly Euripides's drama. Four years later he gave another antique drama of his own, still in lofty verse, "Les Phéniciennes." Now, after another such interval, he comes before the public with a prose historical romance from a most dramatic time—"La Dentelle de Thermidor." He says with the honesty becoming his profession in real life, that he has "tried to adapt his story to history, instead of a natural inclination to do just the contrary." Abbés, vicomtes, and duchesses of the shattered Old Régime make love and suffer, from their exile to prison and the guillotine, not without a chastened reminiscence of philosopher Renan's "Abbesse de Jouarre." *Figaro* says the book gives dainty, poignant, exquisite emotion.

In sober history of "the queens of Emigration," Vicomte de Reiset adds another to the series of his volumes, this on the "Comtesse de Balbi." It was she who pestered the *émigrés* (they were beyond scruple of scandal) by following the future Louis XVIII. to Coblentz, whence she was with difficulty made to return into France, only to conspire and keep a gambling house under Napoleon, eking out her old age under the Restoration by meagre subsidies from the still terrified monarch. In spite of the author's inherited reverence for royalty, his book is illuminative of an unwritten side of history. The Vicomte de Reiset's previous book on the Duchesse de Berry has a revival of interest from the publication of the fourth and last volume of the Memoirs of the Comtesse de Boigne, dealing largely with that inveterately escapading wife and mother of forlorn hopes of Bourbon monarchy in France. If, as the publishers' announcement seems to indicate, this final volume is not to be included in the English translation, it is to be regretted. Never was a clever-headed, long-experienced, malicious-tongued female frequenter of royalties more inspired than the lively countess in these pages, nor with more real profit to posterity. Never was it more crudely shown that, by a law of nature independent of revolutionists, it was high time for the Bourbons to go—*lusisti satis*! I have not seen any English notice of the Comtesse de Boigne's account, written by her as gossip of the time, of Tennyson's "Lord of Burleigh," in which she confirms the poet's story of the village maiden even to minute detail, including the spelling of the lord's name—whereas in reality he was Lord "Burghley," heir of the Earl of Exeter. Did the aged countess refresh her historic memory from Tennyson's lyric ballad? She died as late as 1866.

The unrestrained outpourings of a great mind in letters to an understanding friend would of itself give interest to the volume of unpublished correspondence "Joseph de Maistre et Blacas (1804-1820)," edited with valuable introduction and notes by that chief historian of the Restoration, Ernest Daudet. The book is of still more importance to those who recognize the constant infiltration into modern political thought of Joseph de Maistre's ideas. His undying hatred of Napoleon and his armies was no premature pacifism. The whole theory of war as an instrument of Providence and a necessity for national health—a theory which is not unknown in republics—was elaborated for modern times and imposed on our own thought by De Maistre himself. In another and more personal vein, Paul Trémeaux has gathered together more completely than ever before all the contemporary testimony as to Napoleon's last days—"Sainte-Hélène; les derniers jours de l'Empereur." It seems to replunge Sir Hudson Lowe into the ill fame from which some later historians had lifted him—and his English masters with him.

The "Histoire socialiste" of France since the Revolution, edited by Jean Jaurès, has reached its twelfth and last volume of text, with the period of the Third Republic (1871-1900), written by John Labusquière, sometime leader of the Socialist majority of the Paris Municipal Council. M. Jaurès himself presents the conclusion of the entire work in a dissertation on "the social balance sheet of the nineteenth century." This long work, though not the production of professional historians searching out their matter at first hand, is not without historical importance. It is the result of the collaboration of the most competent Socialists of France, dealing with the very real evolution of views which are as good as news, and in detail with events and men too often passed over in cut and dried generalities by the bourgeois scholar. There are volumes here not greatly inferior to the Revolutionary histories of Thlers. There remains still to be published separately a minute and complete "analytical and alphabetical table" of all the volumes. The work represents the orthodox exposition of the history of present France as accepted by the political party which has all but gained possession of the country and whose politics is a gospel.

For those special readers for whom, either by military profession or taste, history is war, and peace a preparation for war, two notable books have appeared. One is the sixth volume of Pierre Lehautcourt's "Histoire de la guerre de 1870-1871," dealing in 800 pages and 9 maps with the epoch-making battle of Sedan, from August 7 to September 2, 1870. The other is a book which the unprofessional cannot easily appreciate, but which should be of urgent timely interest—"Choses d'Allemagne," by Capt. F. Culmann. It treats in order present German tendencies relative to the preparation of war and the conduct of battle; the recent fortifications of Alsace-Lorraine and their strategic rôle; and the new armament.

S. D.

NEWS FOR BIBLIOPHILES.

The "Bibliography of the Writings of Charles and Mary Lamb," by J. C. Thomson, just published at Hull, England, by J. R. Tutin, is a book that collectors will be glad to get. Besides the first editions of Lamb's books, the more important editions of the collected works are recorded, as well as contributions to periodicals. Mr. Thomson acknowledges that he has freely used the Lamb Bibliography compiled several years ago by Luther S. Livingston of this city, and privately printed at the expense of John A. Spoor of Chicago. That book, which contained reproductions of the title pages of every book described, was more limited in scope, including only first editions; and the record ended with Lamb's death. Mr. Thomson has made one important addition to the first editions, a little pamphlet privately printed by Coleridge in 1796: "Selected Sonnets from Bowles, Bamfylde, and others, with some original sonnets by S. T. C., and a Prefatory Essay on the Sonnet. Bristol: privately printed, 1796." This volume includes four sonnets by Lamb; two had appeared in Coleridge's "Poems" issued earlier in the year, but two are here first printed. They were reprinted in the 1797 volume of "Poems." On November 7, 1796, Coleridge wrote to Thomas Poole:

> I amused myself the other day (having some paper at the printers that I could employ in no other way) in selecting twenty-eight sonnets to bind up with Bowles's. I charge six-pence each for them, and have sent you five to dispose of. I have only printed two hundred, as my paper held out to no more, and dispose of them privately, just enough to pay the printing.

Mr. Thomson says that only a single copy of this little piece is known, the one in the South Kensington Museum; but there are at least two copies in private collections in this country. Besides the three copies of the Birmingham edition of Lamb's "Tale of Rosamund Gray," which he describes, we know of at least two others in America. A new and enlarged edition of Thomson's Bibliography of Dickens is in press, and a Bibliography of Thackeray is in preparation.

In the *Nation* of April 30, we noted that Sidney Lee seemed to have proved that of the two editions of "The Merchant of Venice" the one "Printed for J. Roberts" was actually the first. Since then W. W. Greg has exploded what may be called a bibliographical bombshell in the current number of the English quarterly, *The Library*. A little more than a year ago Alfred W. Pollard hazarded the opinion that those nine Shakespeare quartos which are most common, *i. e.*, "Merchant of Venice," 1600 (Roberts quarto); "Midsummer Night's Dream," 1600 (Roberts quarto); "Sir John Oldcastle," 1600 (T. P. quarto); "King Lear," 1608 (N. Butter quarto); "Henry V.," 1608; "Yorkshire Tragedy," 1619; Merry Wives of Windsor," 1619; "The Contention of York and Lancaster" 1619; and "Pericles," 1619—that all these were publisher's remainders belonging to Thomas Pavier, a famous piratical printer of those times, who bound them up together to get rid of them shortly before the first folio of 1623 appeared. Now comes Mr. Greg to maintain that the dates 1600 and 1608 in those quartos are spurious, and that all were printed, probably in 1619, by Thomas Pavier. As is well known, of four of the above named quartos, there are "twin" editions, that is, other editions of the same date. These are the "Merchant of Venice" (Hayes quarto); "Midsummer Night's Dream" (Fisher quarto); "Sir John Oldcastle" (V. S. quarto), and "King Lear" ("Pide Bull" quarto). These, according to Mr. Greg, are the genuine editions from which Pavier's were reprinted. All but one of the nine title-pages of these common editions contain a device with a Welsh motto. This device, originally the property of Richard Jones, was used by him frequently from 1593 to 1596, but, with the exception of these plays, it seems not to have been used again until 1610. The "Midsummer Night's Dream" has a different device, and the proof that the date of the title-page is not the date of printing is still stronger. Mr. Greg reproduces side by side the same device printed from the same wood block as it appears in Dent's "Plain Man's Pathway," 1605, and in the Shakespeare quarto. The 1605 volume shows that the wood block had just begun to split, while in the book dated 1600 the crack has opened wider and the flaw becomes much more conspicuous. Other evidence is found in a study of the watermarks of the paper upon which the various plays were printed. In the London *Athenæum* of May 9 Sidney Lee suggests a number of doubts as to the validity of Mr. Greg's arguments. He says:

> Without disrespect to Mr. Greg or Mr. Pollard, both of whom have long since won their spurs as bibliographical experts, I venture to express a modest doubt whether their conclusions in their present shape, and in the absence of supplementary corroboration, ought to be treated as more than ingenious conjecture.

At a sale of autographs held by the Anderson Auction Company of this city, May 15, $76 was paid for a letter written by Gen. Grant, April 4, 1865, a few days before the surrender of Lee. The next highest price was $64 for a parole to a Southerner, signed by Lincoln, and dated "Executive Mansion, Washington, October 17, 1864." A letter of Robert Browning, telling how he came to write the "Ride from Ghent to Alx," brought $50. A damaged letter of George Washington, Mount Vernon, July 15, 1798, to Chief Justice Marshall, went for $38.

At a sale at Hodgson's, London, on April 30, the following prices were paid for rare books: Thackeray's Christmas Books, 4 vols., boards, £14 5s.; Combe's "Dance of Life and Death," 3 vols., £10; Keats's "Endymion," 1818, boards, £33 10s.; Tennyson's "Poems by Two Brothers," 1827, £27 10s.; "Poems," 1842, 2 vols., £11 10s.; Swinburne's "The Queen Mother and Rosamond," 1860, £32; proof copy of Blake's illustrations of Job, £11 5s.

Correspondence.

A FRENCH MANUSCRIPT OF FRANKLIN'S AUTOBIOGRAPHY.

TO THE EDITOR OF THE NATION:

SIR: The Library of Congress has just obtained a manuscript volume of some interest. The first page reads: "Mémoires de B. Franklin, traduits par M. Le Veillard." The following leaf is somewhat more full:

> Mémoires de Benjamin Franklin sur sa vie, traduits d'une copie du manuscrit original. qu'il avait donnée avant de quitter la France á son ami Louis Guillaume Le Veillard; la traduction est de celui-ci.

The volume contains 206 pages, of which pages 101 to 206 are in the writing of Le Veillard. The scribe of the first one hundred pages has not been identified. The manuscript throughout is perfectly clean and remarkably free from erasures or interlined words. It could not have been used as printer's "copy."

The autobiography of Franklin has appeared in France in five different translations. The earliest, that of Gibelin, may be set aside as too imperfect to warrant notice. In 1798 was printed Castéra's translation of an English translation of Gibelin with additions and corrections. He does not appear to have had access to the original. Thirty years later Rénouard printed his edition. This library possesses copies of the Gibelin and Rénouard editions, and the text is quite different from that of Veillard, so different as to indicate that Veillard's translation was not used. It is certain, therefore, that before 1828 this translation had not been printed, and I doubt if even any part has been used, for I can find no mention of this manuscript, or any translation by Veillard. As he was killed in the Reign of Terror, it is quite possible that the translation was finished before Franklin left France; though the fact that none of Franklin's letters mentions that Veillard was so engaged is a strong point against such a supposition.

In glancing over the first pages my attention was attracted by some poetry, of which both French and English are inserted. It proves to be the samples of verses of Benjamin, the elder, which were intended to be inserted in the autobiography, but were separated from the original English, their place being taken by the marginal note "Here insert it." The verses are as follows:

Believe me, Ben, War is a dangerous Trade.
The Sword has many marr'd as well as made;
By it do many fall, not many rise,
Makes many poor, few rich, and fewer wise.
Fills towns with ruins, fields with blood beside,
'Tis sloth-maintainer, and the shield of pride.
Fair cities, rich to-day, in plenty flow,
War fills with want to-morrow, and with Woe.
Ruined Estates, Vice, broken Limbs and Scars
Are the effects of desolating Wars.

ACROSTICK.

Be to thy parents an obedient son;
Each day let duty constantly be done.
Never give way to Sloth, or Lust, or pride.
If free you'd be from thousand Ills beside,
Above all Ills be sure avoid the shelf;
Man's danger lies in Satan, sin and self.
In Virtue, Learning, Wisdom progress make.
Ne'er shrink at suffering for thy Saviour's sake.

Fraud, and all falsehood, in thy dealings flee,
Religious always in thy station be,
Adore the Maker of thy inward part,
Now's the accepted time; give God thy heart.
Keep a good conscience, 'tis a constant friend.
Like Judge and Witness this thy act attend.
In heart, with bended knee alone adore,
None but the three in one for ever more.

It is possible there are other additions and variations to be found in this translation, which deserves to rank second among the manuscript copies of the autobiography, the first being that in Franklin's own writing.

WORTHINGTON C. FORD.

Washington, May 11.

A HITHERTO UNKNOWN SOURCE OF MONTAIGNE AND BURTON.

TO THE EDITOR OF THE NATION:

SIR: In making research into the sources of Montaigne I recently came upon one of special significance which may possibly interest such of your readers as are concerned with Renaissance literature. I am much mistaken if the same source was not utilized greatly by Burton in his "Anatomy of Melancholy."

When Montaigne came to Basel in 1581, after the publication of the first edition of his Essays, he mentions among the literati whom he met there, Grynæus (whether Simon or Samuel is not certain), Felix Plater the physician, François Hotman the Protestant theologian and publicist, and a person to whom he, or, rather his secretary who wrote this part of the diary, refers as "the author of the Theatrum." Professor d'Ancona, the latest and most erudite editor of Montaigne's travels, declares that he is unable to identify this writer. I am much mistaken if it was not Theodore Zwinger, the author of the "Theatrum Vitæ Humanæ" which first appeared at Basel in 1565 and then in a completer form in three folio volumes in 1571, just at the time that Montaigne started writing his Essays. Now this huge collection contains in classified order in twenty books illustrations of all the circumstances that could affect human nature, with examples from the classics and from later history, just in the manner of Montaigne. It has always been a puzzle to know how Montaigne collected so many happy examples of the particular truths he wished to force home, and I fancy the clue will be found in this work of Zwinger, of which the Columbia University Library contains the last two volumes. We know that Montaigne collected books of *loci communes*, for in the twelfth essay of the third book written in 1588 he mentions that he has a dozen of them on his shelves ("Essais," edit. Jouast, VI., 299). Zwinger was professor of moral philosophy at the Academy at Basel at the time when Montaigne visited it; and the only other author of a well-known "Theatrum" was Abraham Ortelius, the cosmographer, who lived at Antwerp.

I have found at least one case where Montaigne's use of this book is almost certain. In the eleventh essay of the third book (VI., 265). Montaigne *more suo* quotes a curious remark of the Queen of the Amazons as to the capacity of limping men. None of the commentators have been able to trace this in the exact form in which Montaigne gives it, but it is given by Zwinger folio 2534 of the "Theatrum" (which is paged continuously through the three volumes). Zwinger prints the Greek quotation which Montaigne, very exceptionally for him, quotes on this occasion: ἄριστα χωλὸς οἴφει. Montaigne adds the euphemistic translation "Le boiteux le faict le mieux." He is scarcely likely to have found the saying—which is at the basis of the myth which make the lame Hephæstus the husband of Aphrodite—in Eustathius, whence Zwinger obtained it, or in the Scholiast on Theocritus iv, 62.

Zwinger prefaces most of his books with an elaborate analysis of contents put in the form of a genealogical table, and this suggests to me that Burton, who uses exactly the same method in his "Anatomy" of Melancholy" may also have had Zwinger before him and, possibly in the expanded edition of 1605 in five volumes, obtained from him much of his erudition. But I leave the further working out of this suggestion to the next editor of the "Anatomy of Melancholy," a person whose appearance has long been desired.

JOSEPH JACOBS.

New York, May 15.

A DEFENCE OF THE SPECIAL TEACHER OF COMPOSITION.

TO THE EDITOR OF THE NATION:

SIR: May I present some arguments in contradiction of the position taken at the close of the editorial, "English and Other Teaching," in the *Nation* for March 19? This article suggested that training in English composition should be made a kind of by-product of the teaching of other subjects, and closed with the sentence: "The truth is that if all the teachers did their duty toward English, the special teacher of English composition would be a superfluity." While I admit the full truth of your statement that the work of the teacher of English is often "nullified by mere inattention and carelessness on the part of other teachers," and recognize the gain that would come from the coöperation of all the teachers in the training in English, yet I cannot say that the teaching of English composition can be made so far a part of the work of teachers of other branches as to enable our school boards summarily to dismiss the special teacher of composition. Regarded as theory, I question whether such a plan is good pedagogics; regarded as practice, I am convinced that it is radically wrong.

In the first place the plan for coöperation seems to involve a false pedagogic theory. Is not the argument for the coöperative teaching of composition reducible to the sophism, English is the property of all teachers, therefore all teachers can teach English? Is this true? Does it follow that men and women who have the ability to use good English and to write with a reasonable command of style are fitted thereby to impart their skill to others? I have great doubt whether such persons would be capable of doing so, for it is by no means true in the case of English composition and other arts that the persons who have facility in that art are gifted with the ability to impart that facility to others. Successful teaching of the art of writing presupposes ability in writing and requires further what is most important of all—a vivid recollection of the stages through which the teacher had to pass as a beginner, to enable him to help other tyros stumbling along the same road. This ability is not to be found in every teacher who writes fluently. It is only too rarely found even in those who give themselves up altogether to the teaching of composition.

But there is another and still better reason why general scholarship in English is not enough to fit one to teach the subject of English composition. In the teaching of composition, correction is an indispensable part of the teacher's business. "The assumption often seems to be," says Prof. F. N. Scott in Carpenter, Baker, and Scott's "The Teaching of English," "that anybody who can read and write the English language with a fair degree of proficiency may be entrusted with the correction of compositions. In one sense this is perhaps true. Everybody, or almost everybody, can correct mistakes in spelling or can caution the pupil against certain well-known errors of speech . . . but . . . this is not the essential part of essay-correcting." I should be carried too far away from my subject if I should detail the scope of the term, correction, in the broader meaning which it should have for the teacher of composition. In this part of my argument I must content myself with the statement that skill in the task of correction, without which skill there can be no successful teaching of English composition, does not come in all cases as the result of general training in English.

I have shown upon these theoretical grounds that it would be difficult to find among the teachers of other branches competent teachers for the subject of English composition. A further most practical difficulty in the way of obtaining suitable teachers lies in the tendency toward specialization that pervades all ranks of teachers. A tremendous change of sentiment must be wrought before the teacher of physics, let us say, will feel it incumbent upon himself when fitting for his career to add to his specialization in physics, specialization in English. And will school boards in the face of the public's expectation of specialization in teachers dare to make this double demand of teachers?

An objection to the coöperative plan, more important perhaps than those I have set forth, needs but mention. This plan leaves English composition without a centre of responsibility. What is everybody's business will soon become nobody's business. If English composition is left to be cared for incidentally by the teachers of other subjects, the subject will be practically abolished.

The last objection that I have to make to the proposed plan is that it does not provide for the symmetrical development of the pupil's powers of expression. The plan provides for considerable practice in writing, no doubt, but such practice as would come through "reports on laboratory experiments," "exercises in history," and the like, would be intermittent and one-sided. It would be as if the school should expect symmetrical bodily development among its pupils by permitting them to practise in the gymnasium throughout the year, at frequent intervals perhaps, but one or two exercises, and these selected without regard for the needs of individuals. Like the expert physical director, the special teacher of composition has it as his business to give a series of exercises likely to promote the symmetrical development of the pupils in general, and besides, to diagnose the case of each pupil and prescribe suitable corrective work.

For the reasons, both of theory and of expediency, which I have given, the special teacher of composition should be retained in the school. When his removal is proposed, are we not making the mistake of regarding him as an unscientific and unlearned person who merely knows "how to say things"? Are we not overlooking his larger work? This, as I would have it understood, has been put by Prof. G. R Carpenter, in the book referred to above, "The Teaching of English," in these words:

> He, the expert teacher of composition, is an expert in adolescence. Himself mature, broadminded, well read, he has not entirely put away his sympathy with the young. He understands them, knows when to repress and when to stimulate, of what is the substance of their thought, and how their minds may wisely be led. . . . This delicate, inspiring, tactful influence may well be the most important factor in their development. He owes himself, therefore, some self-esteem, for his place is hard to fill.

His is, indeed, a place that is often inadequately filled, but assuredly it will not be filled by making distinctive work of the trained teacher of composition a part of the work of every other teacher in the school. MAURICE G. FULTON.

Central University of Kentucky, Danville, May 4.

TO THE EDITOR OF THE NATION:

SIR: Following the lead of your recent editorial, Mr. Herbert L. Baker, in his letter in your issue of April 30, puts his finger on two important truths that need emphasizing. First, most teaching, in secondary schools, and in colleges as well, involves too much of what Mr. Baker aptly terms "the pouring-in process." Second, in teaching composition, it is essential to recognize the relationship of thought and language. Composition taught for form's sake only, without regard to the content of thought and its demands, is simply a return to scholasticism and sophistry. Such formal composition teaching richly deserves the strictures of Mr. Baker's letter, and of your recent editorials on the subject.

But, while Mr. Baker has put his finger on two valuable truths, or, perhaps, on two phases of a single truth, he has not presented them in their entirety. There is a further distinction between teaching science and teaching art, a distinction particularly important in the work in composition. The teacher of science may, generally speaking, rest content when his pupils have thoroughly assimilated the knowledge he has endeavored to impart. To assure himself that he has taught successfully, he will, as suggested, require the pupils to express what they have learned. But here expression in language will properly be used only as a test of attainment in that particular branch; and only so far is the science teacher directly concerned with expression. In other words, he will be satisfied when his pupils have sufficiently manifested their understanding of the subject. No doubt, he could exact more than he does; he might even require and teach improved handwriting. But this scarcely pertains to his proper function. As a teacher, he should, of course, cooperate with all his colleagues; but as a science teacher, his business is with his own subject. On the other hand, the composition teacher, dealing with an art subject, is concerned with two things that the science teacher is not. The latter's requirement is: Show that you can understand this subject. That of the former is: Show that you can adequately communicate your knowledge to others. Now, the point to which Mr. Baker rightly directs attention is that the second requirement includes and presupposes the first: the pupil cannot communicate to others what he himself does not thoroughly understand. But the converse does not hold true. The pupil may understand a subject, and be able to give evidence of his knowledge, and yet not be able to communicate it adequately. Even Max Müller, to whose "Science of Thought" Mr. Baker refers to show the essential connection of thought and language, clearly indicates that by expression he does not mean communication.

The other particular concern of the composition teacher is the individuality of the pupil. The teacher of mathematics, for example, need not care whether or not the pupil prefers multiplication to subtraction; his effort is to have the pupil understand both processes. The teacher of botany is not primarily interested in whether or not Peter envisages "a primrose by a river's brim" *sub specie æternitatis*; he rests satisfied if Peter comprehends its structure, classification, etc. But to the composition teacher the individuality of the pupil is all-important. He must start from the interests of the pupil; he must endeavor to deepen and widen those interests by relating them to the needs of mankind. The claim of the pupil's individuality, fundamental as it is for teachers of composition, is often sadly disregarded by them. The result is formal rhetoric and composition, with their natural accompaniments—lack of interest and neglect on the part of the pupils, and dissatisfaction on the part of every one else.

From this proposition a corollary applying to "infant criticism" of literature may easily be deduced. If literature is taught as it should be, not only will the pupil have something to say about it, but the teacher will care to know his opinion.

H. P. BREITENBACH.

University of Michigan, Ann Arbor, May 11.

A FAMILIAR TYPE.

TO THE EDITOR OF THE NATION:

SIR: Permit me to call your attention to the following paragraph from the works of an eminent English writer:—

> Now, in the mind of Mr. ——— reason has no place at all, as either leader or follower, as either sovereign or slave. He does not seem to know what an argument is. He never uses arguments himself. He never troubles himself to answer the arguments of his opponents. It has never occurred to him that a man ought to be able to give some better account of the way in which he has arrived at his opinions than merely that it is his will and pleasure to hold them. It has never occurred to him that there is a difference between assertion and demonstration; that a rumor does not always prove a fact; that a single fact, when proved, is hardly foundation enough for a theory; that two contradictory propositions cannot be undeniable truths; that to beg the question is not the way to settle it; or that when an objection is raised, it ought to be met with something more convincing than "scoundrel" and "blockhead."

In order to avoid misunderstanding and, possibly, unpleasant international complications, I would state that the above extract refers to Robert Southey, and was taken from an article by Macaulay in the Edinburgh *Review* for January, 1830.

GEORGE A. TORREY.

Boston, May 8.

Notes.

Next week the University of Chicago Press will bring out the third volume of Prof. Walter C. Bronson's "English Poems." The selections in this volume are from the Restoration and eighteenth century.

Bertram Dobell will soon have ready his edition of Thomas Treherne's "Centuries of Meditations," which, to judge from the specimens already printed, ought to be more interesting than the Poems. Mr. Dobell is also publishing "The Partiall Law, a Tragi-Comedy," written about 1620 and founded on the same story as Shakespeare's "Much Ado About Nothing."

If literature is a race for fame, Blake and Meredith are to-day undoubtedly the favorites. The critical essays and volumes printing on these subjects grow portentous in number, and always more ethereally sublimated in tone. The latest study, and so far the most intoxicated with enthusiasm, is Richard H. P. Curle's "Aspects of George Meredith" (E. P. Dutton & Co.). In general, Meredith is here regarded as the psychological novelist of types, midway between the extremes of the realist and the idealist. "Psychology is the key to character and the herald of the future" (alas, the key! "There was the door to which I found no key"); but psychology itself is bound up with a metaphysic of evolution, and so the path of the critical commenter is a continual adventure with elusive subtleties of interpretation and engulfing generalizations. Much, perhaps most, of Mr. Curle's philosophy is true enough, and not a little of his criticism is substantial and helpful; but, judging the book as a whole, we frankly do not take pleasure in this tone of literary religiosity. One thing is notable in Mr. Curle's volume, as in Mrs. Sturge Henderson's (reviewed in the *Nation*, February 13, 1908, p. 147; on the whole, a more commendable study than the present work), and in the essays appearing in the magazines—the emphasis is laid on Meredith's poetry as the bearer of his message, rather than on his novels. Which suggests a consolation. There is apparently fostered in our modern education an appetite for this kind of criticism in which personal adoration combines with cosmic enthusiasm; it must have this food or wreck the brain. Now, for years, Browning has been the victim (yet not exactly victim, for in his own day he took a naïve delight in the rôle of veiled prophet) of this intellectual craving, with the result that his more human claims to greatness have been obscured. Evidently the fashion of the day is setting away from him to one who, though almost a contemporary, yet furnishes a more up-to-date expression of the eternities. Possibly the sober and the cynical will be permitted hereafter to read the plain parts of Browning with unmetaphysical enjoyment, and to scoff at his extravagances untroubled by the inquisitive devotee. And to the makers of clubs, to the housewives who dangle at their waist the keys of the universe, to the lovers of esoteric thrills, to the fashion leaders of the mind, a word of advice: Close your Browning and open your Meredith. And to others a word of caution: The Meredithians are upon us.

What shall be said of the Rev. Stopford A. Brooke's "Four Victorian Poets," published by G. P. Putnam's Sons? The poets are Clough, Arnold, Rossetti, and Morris, the two former being voices of Mid-Victorian religious anguish, the two latter of an attempted escape into pure art. The critic follows their works with page after page of well-informed, cheerful, smoothly articulated, and, it must be added, exasperatingly commonplace comment. Through it all runs that vein of—what shall we call it? — optimistic spirituality which is so praiseworthy and which tends so invariably to throw any stalwart soul into the camp of the cynics and sinners. The best part of the volume is the introductory chapter which surveys the poetical field between the close of the early romantic movement and the coming of Tennyson and Browning. Here Mr. Brooke shows flashes of that power of condensed characterization which brought such warm praise from Matthew Arnold for his "Primer of English Literature." The paragraphs on the "Joseph and his Brethren" of Charles Wells may call the attention of a few inquisitive readers to an almost forgotten poet who walked with Keats, and who has been praised in vain by Rossetti and Swinburne. The present reviewer confesses not to know "Joseph and his Brethren," and trusts that, when once he has found that book, he shall owe a debt of gratitude to Mr. Brooke; he has been deceived more than once by chasing the swans of Rossetti and Swinburne.

Professors J. H. Robinson and C. A. Beard of Columbia have collaborated to produce a text book in two volumes which they name "The Development of Modern Europe" (Ginn & Co.). As might be expected from authors and publishers, the book is all that it should be as a matter of form; the grouping of the subject and the maps are good. The emphasis is thrown on the connection of history with present-day questions, and a chapter is devoted to a consideration of the actual problems of politics and civilization. While the authors are not particularly convincing at this last point, the book as a whole is an excellent example of its class, and is well adapted for school use.

Mrs. Mary A. M. Marks writes in the opening sentence of her "England and America, 1763 to 1783" (D. Appleton & Co.): "The history of the loss of America is the history of a Tory reaction," and the two volumes of 1,293 closely printed pages, in which this thesis is defended, form, in certain respects, a highly meritorious study of English politics during twenty critical years. The wealth of personal and political detail is imposing, while the parliamentary debates have been so liberally transcribed or summarized as to relieve all but the special student from the necessity of consulting the originals. The style is readable and often lively, and the author's attitude towards America pronouncedly friendly. To students of American history, in this country particularly, the story of the Revolution set forth in terms of English politics cannot but prove enlightening. More than this, however, cannot be said without important qualifications. While Mrs. Marks evidently knows her English sources well, if not exhaustively, her preliminary list of books consulted is singularly deficient in works by American writers; nor does the text show any wide use of the mass of documents, collected writings, and monographs relating to the period, brought out in the United States. The footnotes, though numerous enough, rarely give specific references to authorities. As a whole, too, the work distinctly lacks continuity; it is not so much a narrative as a treatment of a hundred and twenty-six consecutive and related episodes, in as many short chapters. With all possible recognition, accordingly, of the author's painstaking industry, good temper, and literary facility, we must nevertheless class the work as material for history rather than as history proper. One closes the volumes with a regretful feeling that, had the author omitted a fourth of the matter and worked the remainder into a straightforward narrative, the result would have been, in spite of the limitations of its research, a notable book. There are some slight errors in the text, mainly in dates and the spelling of American names, but these blemishes are on the whole negligible.

Prof. P. J. Blok's "History of the People of the Netherlands" (G. P. Putnam's Sons) is a work upon which we have commented more than once during the past ten years. We cannot perceive that the learned author gains lightness of touch as he advances. The fourth volume, translated by Oscar A. Bierstadt, begins with Frederick Henry and ends with William III. Between lies the golden age of Dutch civilization, furnishing a fine theme for any writer who to solid erudition adds literary gift. Macaulay's third chapter should be a model for Professor Blok, or any one else who attempts to delineate the life of the Netherlands in the seventeenth century. A single sentence, however, will show that in this volume the right touch is lacking; nor is the example cited to be looked on as an exceptional instance of clumsiness:

> The sober mantle of black cloth over the modest black doublet, adorned only among the rich with gold or silver buttons, became gradually brighter and finer in stuff and color, and was soon replaced by the fashionable silken mantle, while the doublet now slashed and trimmed with gold lace was of costly velvet, silk, and satin, and the stiff linen Spanish collars and sleeves since the time of Frederick Henry made way for all sorts of French lacework, the rings and bracelets compressing hands and fingers, giving evidence also of refined luxury.

Between them, author and translator concoct language of this kind with great facility. Hence the present volume cannot be styled a contribution to "popular" history. Professor Blok is an authority on questions of fact, and those in search of information can get it from him. But one needs to employ the cyanide process in extracting the ore.

Of the numerous half-witted or demented persons who have worn crowns during the last two or three centuries, Ludwig II. of Bavaria is one of the most interesting. He was the pupil and supporter of Döllinger, the patron and intimate of Richard Wagner; and his wonderful palaces, his queer habits, his associations with "Lohengrin," his tragic and in a way mysterious end, all help to surround him with an unusual, if unedifying, atmosphere. This is all set forth by Madame Clara Tschudi in "Ludwig II., King of Bavaria" (E. P. Dutton & Co.), in a spirit of true devotion to monarchial institutions and with the greatest sympathy for the morbid sentimentalism of the Bavarian monarch. Yet the true picture may be discerned if the author's point of view be discounted. Ludwig may be caught in his golden swan boat at Hohenschwangau, suddenly breaking into Josephine Schefsky's singing of "Tristan and Isolde" with "La donna è mobile" from "Rigoletto." His political ineptitude and the contempt and dislike of the Crown Prince Frederick are plainly revealed. And Wagner is clearly shown in very much the same relation to the Bavarian public as Lola Montes had stood under Ludwig I. To Ludwig I. the American adventuress was everything. To Ludwig II. Wagner was an "uplifted, divine friend . . . you and God!" The book is by no means a critical history, but it will serve its purpose for the general public.

The seventh volume of Gaillard Hunt's "Writings of James Madison" (G. P. Putnam's Sons), is entirely devoted to the "instructions" sent by Madison when Secretary of State, to the American representatives to foreign countries. This field of Madison's activity has never before been exploited in this way, and the result fully justifies giving so much space to these official papers and sacrificing private correspondence which has already appeared in print. These instructions, covering the years 1803-1807, and prepared at one of the most interesting periods of our history, were not sent to Congress except in much mutilated shape; in their present issue, therefore, they constitute new historical material of high quality. The transfer of the Louisiana Purchase, the efforts to acquire the Floridas and to reach some understanding as to their boundaries, the British negotiations on impressments and the colonial trade, with the complications arising from the orders in council and the evil regard accorded to neutral ships; and, finally, the Chesapeake affair, were the leading subjects of these instructions.

That the ideas expressed were often those of Jefferson, or of the cabinet, does not detract from the merit of Madison. The form of the dispatches was his, and the discussion bears every mark of his authorship and not infrequently, as in the Merry or Yrujo incidents, of his personal prejudices. By reprinting his essay on the British doctrine concerning neutral trade, the editor enables us to determine how far Madison sought to enforce his views when seeking recognition from the offending powers; but Jefferson's foreign policy hardly permitted a resort even to forcible language of protest. To appeal to the "sensibility" of a nation was not enough when the situation was as follows:

> As long as the British navy has so complete an ascendency on the high seas, its commanders have not only an interest in violating the rights of neutrals within the limits of neutral patience, especially of those whose commerce and mariners are unguarded by fleets; they feel moreover the strongest temptation, as is well known from the occasional language of some of them, to covet the full range for spoliation opened by a state of war.

The sequel will appear in the next volume, where this policy bears fruit. It is to be regretted that the editor has not filled in the many missing names and dates, as his position is favorable to discover them. The volume emphasizes the need of a full publication of the early diplomatic archives of the United States, as the replies and dispatches of the ministers in Europe are essential to a proper understanding of these instructions. The masterly treatment of them by Henry Adams in his "History" is some compensation for the neglect of the government on this score, and at no distant day the publication will be undertaken on a plan framed by historical experts. Mr. Hunt's volume indicates the richness of this mine of material, and he has performed his part admirably.

The Society of Antiquaries of Scotland has issued Volume XLI. (Fifth Series) of Proceedings. As in previous years, a large proportion of papers relate to local explorations and early remains. The following are among the more important: Mr. Bruce's "Excavation of a Broch at Jarlshof, Sumburgh, Shetland"; Mr. Barbour's "Notice of a Stone Fort near Kirkandrews, Kirkcudbright"; the report on "Stone Circles Surveyed in Banffshire and Moray," by F. R. Coles; Hay Fleming's account of "The Recent Discovery of a Cist, near St. Andrews," and Joseph Anderson's "Brooches and Personal Ornaments from a Ship-burial of the Viking-time in Oronsay." Under the head of mediæval and modern history, special mention should be made of the paper on Duke Murdoch's Castle, Loch Ard, Perthshire, by David Christison; Mr. Munro's exhaustive "Calendar of Charters and Other Writs Relating to Lands or Benefices in Scotland"; and Mr. Brook's "Communion Tokens of the Established Church of Scotland," which amounts, with illustrations and index, to a hundred and fifty pages. Out of the total number of contributions two alone relate to countries other than Scotland: that on "Terra-cotta Lamps," by Coltman Clephan, and Mr. Abercromby's long and valuable discussion of "The Relative Chronology of Some Cinerary Urn Types of Great Britain and Ireland."

A handsome book from the Elm Tree Press of Woodstock, Vt., "Horace: Quintus Horatius Flaccus," by Charles Loomis Dana and John Cotton Dana, recalls a somewhat similar work recently published by Clarence Cary. Both are intended for English readers, both undertake to make Horace relate the story of his life and tell his opinions by arranging selections from his works in translation. Mr. Cary made his own versions, adopting a style which professed to follow the very contours of Horace's language and which as a consequence smacked more of Browning than of the Augustan poet; his work was intellectual but not easy. The present editors furnish introductions of their own, but the poems are taken from standard translations, in some cases the same ode being given in more than one form. Mr. Cary, as we remember his book, made much of the Satires and Epistles, whereas our new editors take but little from these, with the exception of a group of "Horace's Stories." Now, if the present reviewer can take his own case as typical, it is just the Epistles to which the seasoned reader of Horace turns with ever-growing affection; it is in these he seems to catch the true Horatian urbanity, and just to this extent Messrs. Dana have failed to make the best of their "Roman Poet Presented to Modern Readers." One other slight criticism: we should like to see an example or two of Gladstone's handicraft, if only out of respect to a man who could keep his love of Horace intact through *tanta negotia*, and better translations of several of the Odes than those given could have been found in the volume of the Temple Classics put out last year by John Marshall. As a compensation, Messrs. Dana draw largely from the admirable and too-little-known versions of Sir Stephen De Vere. And altogether, differences of taste aside, they have constructed a volume filled with pleasant recollections for the old Horatian, not without an occasional surprise, and well suited to interest the purely English reader. Here and there comes a touch of humor. Thus, among the mottoes and much-quoted lines in Latin and English at the end of most of the Odes (an admirable device, by the way, to show how thoroughly Horace has been absorbed into the language of the world), they give the "O laborum Dulce lenimen," with the translation, "O beloved lightener of all my labors," and the dry comment, "Horace here refers to his lyre and not to his wife." The book is finely printed and contains a number of maps, diagrams, and illustrations.

Prof. Louis Campbell's "Paralipomena Sophoclea" (London: Rivingtons) forms a convenient and indispensable codicil to his edition of Sophocles completed in 1881. Perhaps half of the annotations express his acceptance of the text or the interpretation of Sir Richard Jebb; the remainder, in which he disagrees with the conclusions of the late editor, is well worth examination. A considerable number of his criticisms of Jebb's views carry conviction, while others are, at any rate, suggestive and instructive. A few, which merely express dissent, ought to have been reinforced by a discussion of authorities (*e. g.*, on πυθοίμεθα Œd. Col., line 11). In defending the chilly and confused *rhesis* of Antigone, which recalls the story of the wife of Intaphernes, he quotes from Swinburne's "Atalanta" Althæa's sentiment when about to slay her son. Under the heading of "Condensed Expression" in the Introduction, he remarks "to the same category belongs the use of cases without prepositions, of optatives without ἄν, and of εἰ with the subjunctive." This certainly is a statement which, as it stands, requires decided modification and explanation.

Of the vast number of hymns and lyrics of the Greek Christian fathers, Bernhard Pick has included about one hundred in "Hymns and Poetry of the Eastern Church" (New York: Eaton & Mains). The compilation is evidently intended for popular use and general information, since the Greek text is not printed. After a brief biographical sketch of each author, such as one might gather from Julian or Schaff, a translation, in some cases several versions, of the better-known poems is supplied. The renderings are from various writers, those of John Mason Neale being of course of greatest merit. The arrangement is chronological, and the volume furnishes convenient information concerning the hymns of Greek origin commonly found in hymn books and religious writings.

Prof. A. Deissmann, hitherto of the University of Heidelberg, will signalize his entrance into the leading theological faculty of Germany, that of Berlin, by the publication, through J. C. B. Mohr, Tübingen, of "Licht vom Osten: Das Neue Testament und die neuentdeckten Texte der hellenistisch-römischen Welt." In this work he will utilize the wealth of recent finds, especially in the papyri of Egypt, that throw so much light on the language, literature, civilization, and religion of the first decades of Christianity. A large number of important texts are to be reproduced in facsimile, some for the first time. The book is written not only for the specialist but for scholarly readers in general.

"Vom Lesen und Deuten heiliger Schriften: geschichtliche Betrachtungen" by Hans Bollmer, in the series known as Religionsgeschichtliche Volksbücher (Tübingen: J. C. B. Mohr), popularizes for the general reader modern methods of interpreting sacred writings, chiefly the Old and the New Testament.

"Jesus im Lichte der modernen Theologie," by Pastor J. Heyn (Greifswald: Ludwig Bamberg), aims to show what, according to the teachings of the newer theology, Jesus and his message is for man. It is distinctively a modern life of Jesus, based on a critical study, but intended for the general reader.

"Katholische Weltanschauung und freie Wissenschaft," a brochure by Dr. Ludwig Wahrmund, professor of the law in the Catholic University of Insbruck, investigates from a legal and scientific point of view the recent Papal syllabus and encyclical. The tone of the work (Munich: J. F. Lehmann) is such that the Austrian authorities have suppressed it, and a demand is made that the author be deprived of his chair. A reply has already been made by the author's colleague in the university, Prof. Leopold Fonck, bearing the same title, but with the sub-title "Das wissenschaftliche Arbeiten Professor Wahrmunds kritisch beleuchtet." (Insbruck: Rauch.) In this the attempt is made to show that Professor Wahrmund has been stealing from the anti-Catholic writings of the former Jesuit, Count von Hoensbroech.

"Die Grundgedanken der paulinischen Theologie" (Tübingen: J. C. B. Mohr), by Prof. Carl C. Clemen of Bonn, the latest issue of the series known as "Theologische Arbeiten aus dem rheinischen wissenschaftlichen Prediger-Verein," is an analysis of Pauline thought, in order to answer the question propounded especially by Julius Kaftan and Wilhelm Wrede: Can the doctrine of justification still be regarded as the central thought of the Pauline system, or is the emphasis rather on an ethico-mystical doctrine of redemption? Clemen's own position is more or less mediating, but inclining rather to the older views.

"Thesaurus Totius Hebraitatis, et Veteris et Recentioris," by Elieser Ben Jehuda, Hierosolymitano (Berlin: Schöneberg, Langenscheidtsche Verlagsbuchhandlung), is to be, when finished in 1914, a dictionary of the Hebrew literature of all ages. The terminology of philosophy, of the exact sciences, of ancient and modern poetry, the new formations of modern Hebrew—all these and kindred features are to be included, with translations in German, English, and French. Not only printed Hebrew literature has been utilized, but also much manuscript material. There will be in all about one hundred and fifty parts, costing 1.70 marks each.

The seventeenth volume in the new edition of "Meyers Grosses Konversations-Lexikon," covering the world from Rio to Schönebeck, has for its longest article "Russisches Reich," the history of which is brought up to the meeting of the second Duma in the spring of 1907. Only two and a half pages are given to "Russisch-Japanischer Krieg," the editors thus wisely sacrificing mere contemporary interest to the standard of correct proportion in which the German encyclopædias are so superior to our own. Our own great men do not loom large in the eyes of the "Meyers" editors. Seven lines are given to Elihu Root, while Theodore Roosevelt receives only three-quarters of a column. We wonder what the White House would say to the following characterization of President McKinley's successor: "He broke no new paths for American policy and the deep-rooted evils of political maladministration showed themselves much stronger than him."

In the beautiful edition of Adolf Pichler's "Gesammelte Werke," being published by Georg Müller, Leipzig, two new volumes have recently appeared, the fourth and the eleventh, leaving only the fifth still to come. The fourth contains six characteristic stories depicting life in the Tyrol, *Dorfgeschichten* in the higher sense of the term, the eleventh bears as special title "Beiträge zur Literaturgeschichte."

"Die Wahehe, ihre Geschichte, Kult-, Rechts-, Kriegs-, und Jagd-Gebräuche," by Capt. E. Nigmann, is a clear account of this vigorous East African tribe, among whom the author served for years as leader of the German *Schutztruppen*. The book is issued with three charts and eleven illustrations by E. S. Mittler & Sohn, Berlin.

The house of Fischbacher, Paris, announces as forthcoming a new collection of discourses by Pastor Charles Wagner, entitled "Par la loi à la liberté: six discours religieux."

We have already noticed at some length (November 17, 1904, p. 397) the first three volumes of Richard Waddington's "La Guerre de Sept Ans" (Paris: Firmin Didot). In the fourth, which has recently appeared, the chief interest centres on the *Pacte de famille*, and on Frederick's victories of Torgau and Liegnitz. As to the *pacte*, it may be said that historians are not yet really agreed in their way of viewing the diplomatic manœuvres of France, England, and Spain in 1761, and the note of this book is favorable to Choiseul. As to Torgau, the discussion of Frederick's extraordinary dispositions at that battle, to which Chancellorsville offers the only parallel, is quite inadequate. The last word must be of praise for a book that is by far the most comprehensive on the subject.

The Associated Charities of Rome has issued a "Guida della beneficenza in Roma," a well-printed volume of over 500 pages, furnished with two general and five special indexes. Its subjects range through a broad field of social service, and include such entries as cheap dwelling houses for the poor, free public libraries, scholarships in the fine arts, and prizes controlled by the Accademia dei Lincei. The work, which has been very thoroughly done, shows the evolution of charity administration in Rome from its origin to the most recent forms of education and social defence. The book is of interest not only to the benevolent of Rome, but to all students of this branch of sociology, and it would be likely to prove helpful to workers among the Italian poor in American cities. It is published by the Ufficio d'Informazioni e Indicatore della Beneficenza, Via San Vincenzo a Trevi, Rome.

Walter August Wyckoff, assistant professor of political economy at Princeton, died May 15. He was born in India in 1865, was graduated from Princeton in 1888, and, after a year of post-graduate work, he devoted his time to study, to travel, and to working among the wage-earners in all parts of this country. The result of his observations appeared in his books: "The Workers—the East" (1897), "The Workers—the West" (1898), "A Day with a Tramp, and Other Days" (1900). He was appointed lecturer on sociology at Princeton in 1895, and assistant professor of political economy in 1898.

Frederic May Holland died at Concord, Mass., May 17. He was born in Boston in 1836, was graduated from Harvard in 1859, and a few years later entered the Unitarian ministry. In 1874 he resigned, and since then he had devoted himself chiefly to writing. Among his books are "The Reign of the Stoics" (1879), "Sordello: a Story from Robert Browning" (1881), "Stories from Browning" (1882), "Rise of Intellectual Liberty" (1885), "Frederick Douglass, the Colored Orator" (1895), "Liberty in the Nineteenth Century" (1899).

The Rt. Rev. Ignatius Frederick Horstmann, Catholic bishop of Cleveland, died May 13. Born in Philadelphia in 1840, he was educated in this country and abroad. In 1892 he was consecrated bishop. He had been president of the Catholic Historical Society and an assistant editor of the *American Catholic Quarterly Review*. Among his literary productions were an edition of Nampon's "Catholic Doctrine as Defined in the Council of Trent," an "Introduction to the Holy Bible" and a "Dictionary of the Bible."

The Rev. George Mills Boynton, secretary of the Congregational Sunday School and Publication Society since 1888, died in Boston May 17. Born in Brooklyn in 1837, he was graduated from Yale and the Union Theological Seminary, and for more than twenty years he filled pastorates in Presbyterian and Congregational churches. He was author of "The Model Sunday School" (1892), and "The Congregational Way" (1904).

The death of Sir Alexander Condie Stephen was announced in the London dispatches of May 11. He was born in 1850 and entered the diplomatic service in 1876. He was a fine linguist, noted for his knowledge of Russian, Turkish, and Persian. He published "The Demon," translated from the Russian; and "Fairy Tales of a Parrot," adopted from the Persian.

Jules Christophe, the noted Balzacian, has died at the age of sixty-seven. He wrote on a number of subjects, but his chief work was a "Répertoire de la Comédie Humaine de H. de Balzac," compiled in collaboration with Anatole Cerfberr and published, with an Introduction by Paul Bourget, in 1887.

The death is announced, in his seventieth year, of Konrad Furrer, professor in the theological faculty at Zürich and head of the Palestine Union. His first work, "Die Bedeutung der Geographie für die biblische Exegese," was published in 1872, and was followed by a number of books on this and kindred subjects.

H. F. Ewald, father of the recently deceased Carl Ewald, and himself a well-known writer of Danish fiction, has died in his eighty-seventh year. His novels dealt for the most part with the romantic history of Denmark in the fifteenth and sixteenth centuries.

DELANE OF THE "TIMES."

John Thadeus Delane, Editor of the "Times": His Life and Correspondence. By Arthur Irwin Dasent. 2 vols. New York: imported by Charles Scribner's Sons. $7.50 net.

To pass swiftly over the defects of these volumes, they are diffuse and padded, yet leave much lacking. We are let very little into the inner life of Delane. What was his reading; what were his political convictions; what his methods of work; how he organized his office—all this we are left to gather from scrappy allusions. There is not even a connected account of the rise of the *Times* to commanding influence under Delane. Nowhere in these pages does one hear the actual hum of the newspaper; and the reverberation it came to make throughout Europe is stated rather than explained. Still, there is ample material here, though badly arranged, and one takes it to form his own picture of the man, and the rôle he played.

It was the chance of acquaintance and friendship with John Walter, proprietor of the *Times*, that made Delane its editor at twenty-three. He had served a novitiate of barely a year. Walter liked him, believed in him, and put him at the head of the paper. This fact shows of itself that neither the obligations of the owner nor the duties of the editor could have seemed so serious in 1841 as they were when Delane laid down his work. He began it in a lighthearted burst of youth: "By Jove, John, what do you think has happened? I am editor of the *Times*." He retired in 1877, broken in health, at sixty. Between those dates, England saw under him a development of journalism more wonderful, though less lurid and clamorous, than anything which has since occurred.

Delane was not a man of first-class powers, yet he was admirably fitted to do the work which fell to him. Personally, he wrote very little. He was editor in the sense of editing the matter of others. He knew what he wanted written; he had a good eye for the men who could do it for him; he built up a notable staff of editorial contributors and foreign correspondents, but his own duty, as regards the daily issue, he conceived to be to see everything in proof before it went in. For many years, it was his practice to stay in the office till four or even five in the morning, until the last page went to press. This was on top of the most lavish dining out. Whether it was the labors and vigils after midnight, or the social indulgences before it, that wrecked a naturally vigorous constitution, we would not undertake to say. Delane, of course, defended his great fondness for aristocratic society on the ground that in it he picked up a vast amount of useful information. Doubtless this was so; yet his diaries show a depressing round of dinner engagements, four or five a week in the season, many of which must have been barren to him in any sense except that of giving one opportunity more to roar as a lion. It was presumably of Delane that Disraeli made his famous gibe about "the stern guardian of popular rights simpering in gilded saloons." Yet there went with this a power of sustained and severe industry that might have entitled Delane to sit for that portrait of the editor of a daily newspaper which Carlyle painted—the man who "buckles himself nightly with new vigor and interest to this thrashed straw, nightly thrashes it anew, nightly gets up new thunder about it; and so goes on thrashing and thundering for a considerable series of years."

In the strictly editorial quality, besides what has already been noted, we find Delane had a keen scent for news. One day his physician casually remarked to him: "Lord Northbrook called on me to-day and asked me how a hot climate would be likely to suit his daughter, whom I have had under my charge. I said it would suit her very well." That was enough for Delane. The next day, the *Times* astonished the town and even the Ministry by announcing that Lord Northbrook was to be appointed Governor-General of India. "How lucky you are in murders!" he wrote from Interlaken in 1855, to the editor in charge. This reads like a prefigurement of latter-day sensationalism. But Delane liked the spice of horror. And he knew how "the only topic" of a given day must domineer over the *Times* of that date. It is characteristic of the genus editor, too, to find Delane groaning over misprints. "I never see a paper," he once wrote, when away on one of his long vacations, "but I long to slay a [proof-] reader." He would have wanted to slay another, had he seen the blunder (Vol. II., p. 266) which speaks of the treaty for the conquest of Belgium by Louis Napoleon, as one "offered to France by Prussia."

But we have yet to refer to the political circumstances which, falling in with the peculiar aptitudes of Delane, made the *Times* the most powerful newspaper in the world. It was an age in which the advantages of discreet publicity were beginning to dawn upon English statesmen. Delane offered them the vehicle. He made it his business to be in touch with them, and to lead them to see the profit of the contact. The result was that he soon became the repository of all kinds of official secrets. For years the *Times* used to print the Queen's Speech before it was delivered. Delane was in the confidence of both political parties. Ministers came to see him, as he went to see them, at all hours of the day or night. His informants and purveyors of information were in every Cabinet. Once he was told by a certain Minister that it would be impossible for him to furnish the *Times* the Queen's Speech. Delane replied that it did not matter, as there were four other men in the Cabinet from any one of whom he could get it. It was in the *Times* that people came to look for the most accurate political forecasts, for announcements of the fall of ministries and of the composition of new governments. A long course of success in such lines, with due affectation of mystery and infallibility, could not fail to give a newspaper immense prestige.

This, however, was not nearly the whole of it. With the new publicity, went an unprecedented meddling with the political affairs of Europe. The rise of the *Times* was almost coincident with the rise of Palmerston. He could keep his fingers out of no pie on the Continent. Foreign relations were never before so important in shaping English policy, and they have not been since so influential. It was the era when, as Lord Rosebery has said, England assumed a sort of "moral censorship" over Europe, and exhorted and interfered and bullied to her heart's content. Here lay the second great opportunity of Delane and the *Times*. He himself was called "one of the best-informed men in Europe." He gathered about him men of special knowledge, able to do the intelligent lecturing of Spain and Portugal and Greece and Italy. Then, with constant official intercourse, and receiving continually government inspiration, the *Times* was able to make itself the thunderous voice of England. Foreign chancelleries read its pages before they turned to their own dispatches. Both for advance information and for weight of opinion, this English newspaper led all others printed. Its prosperity waxed with its power. Its proprietor was enriched, its editor was munificently paid. But in all this unexampled triumph we search in vain for any fixed policy, any dominant moral purpose. England meddled everywhere, and made herself hated everywhere; and the *Times* and its editor had to take their share of the hatred.

CURRENT FICTION.

The Spanish Jade. By Maurice Hewlett. New York: Doubleday, Page & Co.

Mr. Hewlett's mannerism is less insistent here than in most of his fiction, perhaps because the substance of the work is less pretentious. One does not quite lose the impression of him as a person more intent upon being quaint than upon being himself; but the impression is more tolerable because what he has to offer is a confessed trifle and may as well be quaint as not. His incident of a travelling Briton having an affair with a half-gypsy dancing girl—an affair from which he at least emerges benevolently unscathed—has no striking novelty to commend it; but Mr. Hewlett's consciously graceful treatment makes a pleasant study of it. His imagination long ago proved itself at home in the South, and his present interpretation of the Spanish character is neither bookish nor offensively sentimental:

> That an Italian should make public display of his property in a woman, or his scorn of her, was a thing unthinkable; yet, if you came to consider it, so it was that a Spaniard should not. Set aside the grand air, and what has the Spaniard that the brutes have not?

So, with the apparent approval of his author, reflects our Briton. The poor jade, who has escaped from the brutality of her lover, is rescued from the grosser brutality of a rustic mob by the Englishman errant. The lover pursues, and is killed by the jade lest he kill the Briton. The casual pair are linked romantically by the incident, and meet thereafter under the shadow of a Spanish vengeance which is eventually stayed, not by the magnanimity of the Englishman, but by the chivalry of a humble Spanish follower of his. To this follower, who adores her, to be sure, and is on the whole the better man, our island adventurer turns her over without too much ceremony, but not without some inkling as to the inferior figure he himself makes in the whole episode. Mr. Hewlett's archaisms are less crabbed here, his air of complacent virtuosity less marked, than in much of his more pretentious writing.

The Sisters. By Mrs. Percy Dearmer. New York: The McClure Co.

Whatever else this story is, it is exceptionally interesting. The drama is unusual, and the persons greatly alive. The situations and predicaments are so knitted into one another that suspense is kept at high tension—and this in spite of length, of much reflective and philosophic comment, much quotation from the poets, and the trick, in the Meredith manner, of an accompanying Greek chorus in italics, drawn from the note-book of one of the characters. The story concerns the destinies of the lawful and unlawful families of Sir Raymond Templeton of Templeton. Though they are kept apart by his contrivance for many years Fate at last brings them face to face, the more tragically that Sir Raymond's nephew is the lover of each daughter. Though both the unhappy mothers, the angel of light, and the genius of darkness, go down to their graves, the sisters survive to prove the might of tolerance, kindness, and self-sacrifice. The lesson throughout is one of patience and charitable judgment for any unfortunate girl who through ignorance or inheritance, is born to sin. The broadest charity and the most generous interpretation of life run through the book, with an unsparing, ironic scourge for the coward and the double dealer, whether in the person of outward complacent respectability, or of young paganism delighting in the chase.

Having said thus much in recognition of the ability and high aims of the book it remains to wonder if anything can quite justify its horrible painfulness. The scenes that hurt are not introduced in the detestably "knowing and showing" manner of lesser novels, but a greater writer, we think, would have conveyed the moral with less offence. The author herself feels called on to explain in her preface that her justification lies in the necessity for darkness as well as light in the development of character. Granting this and readily granting her seriousness of aim, the development of a story demands artistic abstinences.

The Golden Ladder. By Margaret Potter. New York: Harper & Bros.

This book is a long and verbose arraignment of American commercialism and American "lust for gold as gold." Alike in design and language, it is overloaded with a bias for the profuse. Even contrast, that is, American contrast, is denied the reader, since the only group existing without baseness more or less frank and without selling itself for gold, is the French family, father, mother, child, who monopolize the friendly and domestic virtues:

> Not Americans, these people; to whom the joys and the woes of others were almost as their own. They were of an order of life more primitive. They were —they are—human beings: men and woman: brothers and sisters of the family of Adam.

Huge canvases of Chicago and New York constitute the scenery, minutely painted over with microscopic details of greedy money-making. The pigments in this priceless painting are mixed with dry Martini cocktails and highly colored with poisonous dyes obtained from Wall Street and the underworld. Except for the Briand family, and an occasional lapse from egotism on the part of the hero, the novel is unjustifiably repulsive. In a bygone day Thackeray used to be called a cynical writer. But compared with "The Golden Ladder," "Vanity Fair" breathes of heliotrope.

Quickened. By Anna Chapin Ray. Boston: Little, Brown & Co.

> Now let us sing
> Long live the king——

this is a clean story.

The scene, which is laid in Canada, gives a vivid impression of landscape and figure in Quebec and the neighborhood. The persons are of many types, French Canadian Catholics, English Canadian, and American Protestants, priests, and laity. The pivot of the matter is the flight to Canada from New York of a young man involved in a financial fraud of which the full story is not revealed, till the end. In his new surroundings he enters upon the honorable life from which weakness rather than an evil nature, had tempted him. He becomes a Catholic; and under the influence of his friend and confessor, while the latter lives, and still more after he has lost his friend by death, he is led to see that confession and reform are not enough, but that restitution must be made. The story is in no sense a great one, but its deftness of description of place and person, its seriousness and refinement, make it comfortable reading. In passing, one wonders how long a man's "peroxidized" hair could deceive a community.

Woven in the Tapestry. By Emily Post. New York: Moffat, Yard & Co.

A slender, delicate, white-vellum-paper-bound tiny volume this, with corresponding contents—graceful, imaginative, white-souled. The nosegay of chapters from the life of a fairy-like princess holds allegories that trace the growth of her mind, soul, and heart. Side by side with these are cameo portraits of her lowlier neighbors, of her courtiers and counsellors, and of the true and only prince. The soul not dead to the whisperings of poetry, may pleasurably walk in this pretty garden of fantasies.

The Old Room. By Carl Ewald; Translated from the Danish by Alexander Teixeira de Mattos. New York: Charles Scribner's Sons.

This is emphatically a book for its own and for none other. Its own will find it a beautiful, mystical allegory of marriage, full of old faiths, and their triumphs over the lure of modern life; of heredity's clutch and law's majesty, the might of custom, the tears of repentance, the tread of Fate. And there will be, it may be surmised, another public whose eyes will be darkened that they see not; who are not eligible to enter that symbolic room where generations have sat and discoursed of the deepest things of life. To these blind ones the mysticism will be dark and the allegory vain, the conversation Scandinavian drivel, and the conclusion of the whole matter unsatisfying yet welcome.

The Tenants. By Mary S. Watts. New York: The McClure Co.

This is almost an invention in stories. For though many a short tale has been written about the abandoned ancestral home, the land-poor descendants who rent, and the engaging fraud who hires, and though many a novel has had similar accessories, this is a fresh arrangement, in which the plight is amplified into a long story without a novelistic love affair for the central interest. The book is "an episode of the eighties"—a chronicle and abstract of the time in the matter of costuming and conduct, extended to take in a deal of the universal in human nature. The family circle, resenting yet needing the presence of strangers in the old abode, the mutual lack of admiration among the different branches of the family tree, the ins and outs of town surveillance, and finally the arrival, through a story of period and manners, to a quite sufficiently climactic episode—all raise the book out of the list of merely local literature. A certain confiding quality, a certain reminiscent strain, a total absence of egoism, though the story is told in the first person, a leisureliness possibly over-leisurely, offer a pleasant, if far-off suggestion of the De Morgan manner, shifted from fields English, to pastures American.

The Religion of the Veda, the Ancient Religion of India. By Maurice Bloomfield. New York: G. P. Putnam's Sons. $1.50 net.

The seventh series of the American Lectures on the History of Religions, inaugurated by Prof. Rhys Davids with his History of Buddhism, reverts to India again with this volume by Professor Bloomfield of Johns Hopkins. As the term *ancient* is rather vague when used of Indian literature, the sub-title explains that the religion treated is "from Rig-Veda to Upanishads." The implication that the polytheism of the Rig-Veda is one religion with the pantheism of the later period is likely to awaken distrust, but it may be permitted as a fashion of speaking, as if one should talk of the religion of the Bible. The topic is discussed in the six lectures which make up the book as a complex of religious and philosophical thought. The details of ritual are neglected, and mythology is treated as a mine from which are drawn specimens calculated to illustrate the author's views. This method is perhaps inevitable under the circumstances. Popular lectures must be dogmatic or they would lose the charm of conviction. The result is an exposition of Professor Bloomfield's theory of what he calls the religion of the Veda.

The first lecture is an admirably clear introduction, in which the author expresses his opinion that the beginnings of Vedic literary production date from 2000 B. C., rather than from 1200 or 1500. He brushes away discussion of the probability of the chosen date by assuming that scholars who do not agree with him are guilty of something, it is not clear what, and have to "salve the conscience," in order to adopt a more conservative date. But the result remains about the same, since, after all, "we do not know" within centuries to what time to assign the Rig-Veda. It may belong to any period, or to the whole period from 1000 to 2000 B. C., that is, as "literary production," though the institutions and beliefs of which it is the outcome may of course be older by other uncounted centuries. This is, it may be said, an improvement on the extravagant view of Tilak and Jacobi, who tried, on very insufficient evidence, to add another millennium to the age of the Rig-Veda, a view, if we remember rightly, formerly endorsed by Professor Bloomfield.

In his interpretation of the Vedic hymns the author is inclined to see only one side of religious expression. To him there is in these early devotional poems only the voice of priests tied to the ritual and concerned mainly with the prompt payment for their services. Selected quotations easily show that even some of the hymns to Aurora are composed under the influence of greed rather than of devotion, and the author's conclusion is that Vedic worship in general is not only influenced but is wholly inspired by the same cause. A less extreme view, however, seems to be nearly attained when Professor Bloomfield says that "such performances, to some extent, continue the pious ways of the fathers." This was a theme that might profitably have been enlarged upon. The father's work mechanically imitated by the son is sure to be more mechanical as time goes on and generation copies generation. No one, in fact, recognizes more clearly than the later Vedic poet that he is a degenerate. He scarcely ventures to hope that his work, no matter how carefully wrought, can be as acceptable to the gods as was the earlier inspired work of his fathers. Naturally, in the mass of matter, a thousand hymns addressed chiefly to the same few gods, there will be any amount of material to support the thesis that the Rig-Veda is composed for baksheesh only. But there are other hymns revealing the other side and these are the hymns Professor Bloomfield does not quote, though he admits that the Vedic poets are not merely technicians but "tense observers of the great facts and acts of nature . . . poets and philosophers."

As regards the derivation of the monistic philosophy of India from a source outside of Brahmanism, Professor Bloomfield takes sides against the view of Professor Garbe and holds, quite correctly in our opinion, that it is not justifiable to look upon the warrior caste, in distinction from the priestly caste, as the inventors of the doctrine which raised religion to a philosophy. He notes that this monistic philosophy developed naturally from the Brahmanistic religion, or theology. On another point, also, the author is quite right—that is, in objecting to Oldenberg's theory that the Vedic "monotheistic" Varuna is due to Semitic influence. In the final lectures he gives a good account of the Hindu's religious life and the goal of religious aspiration.

England in the Seven Years' War. By Julian Corbett. 2 vols. New York: Longmans, Green & Co. $6 net.

It seems the fashion of the hour among historians to affect a complete ignorance of military questions and a large competence in legal and constitutional ones. The result is not always happy, in either direction. Just as the historical interpretation of legal doctrine frequently fails from over confidence and lack of the legal point of view, so does the account of great wars fail from inexcusable lack of effort to grasp the essentials of military affairs; and, after all, great wars, the national struggles for existence, deserve something better than slipshod treatment. Fortunately, there are signs of improvement, and writers like Tout, Oman, and Firth point a way where others should follow. The volumes before us are conceived in accordance with the better ideal. In them Professor Corbett approaches England's great struggle for colonial empire from the point of view chiefly of sea power, and by his details and skilled interpretation clears up many aspects until now obscure. Thus our latest historians of the subject may turn to Professor Corbett to learn important points of American history they have hitherto completely failed to understand. They will realize, for instance, that Loudoun's abandonment of the attack on Louisbourg in 1757 was neither ridiculous nor cowardly, but a correct and courageous decision, which was "more than justified." And, to take another instance, they will discover that Wolfe's final attack at Quebec was not in pursuance of the plan of his brigadiers, as commonly stated, but a brilliant strategic stroke of a totally different nature, which was opposed by his brigadiers, who, like our historians, could not understand it. To sum up the merits, then, of Professor Corbett's book: it follows the naval operations of the Seven Year's War with close scrutiny of detail, with profound appreciation of naval strategy, and with illuminating judgment. Incidentally the military and diplomatic aspects of the war are covered.

Nevertheless, the history as a whole cannot be praised without reserve, for it falls short of the highest class. From the first to the last page there is a perceptible preoccupation with present-day conditions, and an anxiety to measure events by the standard of naval principles that are often overelaborated and far from convincing. Professor Corbett follows Capt. Mahan's footsteps with greater accumulation of detail, but with far less certainty in framing generalizations. A few extracts may be given to illustrate these criticisms. In the comment on Frederick the Great's negotiations for an alliance with Turkey, we are told that it "was an unscrupulous policy which . . . some have tried since. The only result that has ever come of it is to make the perpetrator a pariah in Europe" (II., 26). In other words, the author forgets the Crimean war and other like incidents, and is solely preoccupied with the Emperor William and his Eastern policy. It is always Germany and the great naval war of the near future that is in Mr. Corbett's mind, and this makes him so eager to inculcate sound principles of naval warfare that he often gets carried into quite impossible positions. Thus, it is continually suggested that Chatham and Newcastle were deliberately applying complex laws of naval strategy, with a large apparatus of technical terms, to the shifting conditions of the Seven Years' War. In 1756 Newcastle believed that "he had manœuvred France into a position which left her no move except the desperate expedient of invasion" (I., 140). Yet in fact nothing can be clearer than that invasion was the one thing which was calculated, and justly, to alarm this most pusillanimous of party bosses. Pitt in 1758 develops his attack on Cherbourg, from a "raid into an eccentric attack" (I., 295). This may be true, according to Professor Corbett's technical values, but cannot be true as an interpretation of the working of Pitt's mind. This attitude on the part of the writer is constant throughout, and taken with a certain carelessness of style, detracts considerably from the value of an otherwise excellent piece of work.

Anthropological Essays presented to Edward Burnett Tylor. Pp. viii., 416. New York: Henry Frowde. $5.

This stately volume, issued in honor of Dr. Tylor's seventy-fifth birthday (October 2, 1907), is a fitting tribute to this Oxford scholar's eminent services in the investigation of the early life of man; the essays, nineteen in number, are by distinguished specialists, and contain a large mass of permanently important material. A sympathetic and discriminating sketch of Tylor's work by Andrew Lang sets forth clearly his importance as an explorer—the cautiousness and thoroughness which make him in a real sense the creator of the science to which he devoted his life; the lines laid down by him have been followed substantially by all succeeding writers.

In a notable article on the method of investigating the laws of marriage and descent (in Vol. XVIII. of the *Journal of the Anthropological Institute*) Tylor expressed the opinion that the best way to study the subject was by a tabulation of customs. Since that article was written many new facts have been brought to light, but no improvement on his method has been suggested. The question of the form of the original family, the origin of exogamy and its relation to totemic kins, is one of great obscurity, reaching back, as it does, beyond the earliest historical records. The four essays in the present volume that are devoted to it, while they do not solve the problem, contribute to the clearing up of certain points. Atkinson's view that exogamy arose from the jealousy of the father in the original family, who claimed rights over all the females of his group, drove out the young men, and forced them to seek wives elsewhere, is open to various objections, the principal of which are stated by N. W. Thomas. In support of the theory that marriage relations were determined originally by sexual jealousy, Atkinson adduces the custom of certain of the lower animals, as the New Caledonia wild cattle—the old male is said to expel the young ones; and Thomas accepts as a fact the existence of sexual aversion among the lower animals between parents and offspring. But, apart from the doubt as to the universality of the custom in question, it is to be noted that the expulsion of young males proves not sexual aversion, but aversion to rivals—the dominant male generally drives out all other males, whether they are his offspring or not. On the other hand, there is much that favors Havelock Ellis's theory, here adopted by A. E. Crawley, that the custom of adelphic avoidance (that is, the prohibition of marriage between brother and sister) arose from the fact that in young persons of opposite sexes brought up together from infancy the pairing instinct is dulled by long familiar intercourse. This view explains much in early marriage laws; and another important step is gained if we hold, with Crawley and others, that the normal constitution of the early tribes is a division into two groups (phratries), each of which, by friendly agreement, furnishes wives and husbands for the other. This hypothesis, with which W. H. R. Rivers is here in general accord in his criticism of Lewis Morgan's system of relationships, appears to offer the best starting-point for the study of exogamy; but the further question, whether the phratries precede the totem groups, answered in the affirmative by Crawley and in the negative by Lang, it does not seem possible to settle in the present state of our knowledge.

L. R. Farnell's criticism of Professor Usener's hypothesis of *sonder-götter* (divinities with highly specialized functions and transparent names, and almost impersonal), out of whom the Indo-European concrete gods were evolved, is vigorous and in the main points successful. Two points, however, should have been made clear at the outset: first, the term "impersonal" in this discussion is out of place, for all such divine figures, in Greece or in Rome or elsewhere, are distinctly personal, since they have definite functions and aims; and secondly, the chronological position of the particularistic divinities is to be determined from the nature of their functions—the ταράξιππος, for example, who frightened horses in the race-course, is naturally assigned to a period when there were races. Farnell shows, in fact, that many of the Greek figures cited by Usener are late, and that the deities with specialized functions, after the manner of the Roman *indigitamenta*, are rarely to be met with in savage religions. He points out also that a god is not necessarily nameless because he or she is usually addressed by a simple appellative, such as "the god" or "the mistress" or "the virgin"; among the Semites, indeed, the common designations of gods were such epithets as "the strong one," "the lord," "the lady." Farnell does not discuss the whole of Usener's description of the growth of the great gods, but from his statements in this article it may be inferred that he regards the description as inadequate.

The Poems of Sappho: An Interpretative Rendition into English. By John Myers O'Hara. Chicago: Privately Printed.

Thirteen years ago Pierre Louys published his "Chansons de Bilitis" and advertised the work as a translation of some newly discovered poems by an Egyptian pupil of Sappho, Bilitis, whom he invented for the occasion. The trick had been played before and took in no one, except perhaps a few general readers. The only interest that a scholar could have in such a book was to find out how far its author had grasped the spirit of the sixth century B. C., how far, in fact, Bilitis had expressed herself as a contemporary of Sappho conceivably could. Any scholar could foresee that a Frenchman of the type of Louys, letting his imagination work on the sixth century, would inevitably drift into the tone and language of the later period of which we know so much more, the Alexandrian; and that in the mouth of Sappho's friend we should find the sentimentalities and the ingenious prettiness of the Alexandrian epigram. Nothing short of genius could avoid this risk of literary contamination, though that a genius can escape it has been demonstrated by Swinburne.

Mr. O'Hara's enterprise differs from the ingenious Frenchman's in certain essential points. We possess two odes of Sappho and a number of very brief fragments whose precise value every reader can judge for himself in Wharton's useful little book which gives below the original Greek a faithful translation into English. No one therefore need be taken in by the present work; and the phrase "interpretative rendition" should be enough to put any experienced reader on his guard. Nevertheless this seems to us a mischievous little book. It is very attractively got up in the style of the Mosher reprints, a dress that would sell almost anything, and especially Sappho, about whom those who do not read Greek maintain an insatiable curiosity. Our quarrel with Mr. O'Hara is not that he makes a false pretence of giving us Sappho in English verse, for he has managed to work in, so far as we can see, every coherent fragment, even those that editors now reject as spurious, and the new Charaxus ode. But it would give a scholar some trouble to track the originals down in these verses, since Mr. O'Hara translating Sappho is almost indistinguishable from Mr. O'Hara composing what he thinks Sappho might have written. If, indeed, he had indicated by italics all that he took directly from Sappho, the reader might well be left to judge for himself of the value of the mass of verse that remains.

What we have said so far applies chiefly to the fragments. Of the Ode to Aphrodite he makes a fairly good translation into sapphics and confines himself to the text. But the Second Ode, for which Catullus gave us three stanzas, Mr. O'Hara expands into seven, and the last three stanzas are all his own. He proceeds through about eighty pages to scatter and conceal the few petals of the "rare roses" of Sappho that have come down to us on the lips of grammarians. A writer who does this may plead the precedent of Swinburne, who decided that Sappho was beyond the powers of any translator, and so wove into his own verse, with consummate skill, most of her that is worth preserving. But Swinburne had the power to "cast his spirit into the mould of hers" and no poet has a surer footing than he in the "purlieus of the past." The mere scholar can only envy him from afar. He was incapable of printing under the name of Sappho poem after poem in which there is either nothing at all of hers, as in the case of the ten stanzas on page 9 of Mr. O'Hara's work or the eight stanzas on page 75, or almost nothing, as in the seven stanzas on page 25, where the exclamation "Ah for Adonis!" alone represents Sappho. Still less would Swinburne have offended the ear by scanning so as to throw the accents thus: Androméda, Megára, Pándion, and Naucrátis (see pages 72, 66, 81, 14), or by giving us for a sapphic such a line as,

> Theatre pledged to the Muse, now deserted.

A number of anachronisms are also to be expected from one who is evidently not thoroughly familiar with the classics.

We cannot leave the subject without a word as to the general impression of Sappho, her character and tastes, offered to the reader of this book. With Welcker and all the other distinguished scholars who have defended her reputation the author is, we should imagine, unacquainted, and he probably derives from such writers as Pierre Louys the decidedly unpleasant atmosphere of his verses. No one would thank us for quoting specimens of this sort of writing. It is sufficient to say that it is old-fashioned from the scholar's point of view. The true Sappho may be read and quoted by all, young and old, without reserve. This is not so with Mr. O'Hara's Sappho.

A Calendar of the Court Minutes of the East India Company, 1635-1639. By Ethel Bruce Sainsbury; with an introduction and notes by William Foster. New York: Henry Frowde. $4.15.

The doings of the English merchants in India and the Spice Islands, as revealed in the letters received by the East India Company from its servants in the East, have already been set forth in volumes of records under the editorship of Mr. Foster. In the volume before us, to which he has written an excellent introduction and a few notes, we have an opportunity to see in detail the doings in London of the Governor and the General Court—the meetings, the sales of the goods brought home, and the attempts to protect the monopoly. The "Court Minutes" down to the close of 1634 were calendared by the late Mr. Sainsbury in the invaluable series of Calendars of State Papers: East Indies. Continuing the work of her father, Miss Sainsbury has calendared the Minutes for the five following years to the close of 1639.

It was in this period that the company fell upon evil days. As usual, the competition with the Dutch and Portuguese was always severe. It was characteristic of the Hollanders that when they had to abandon to the English, according to the Accord of 1623, one of the Bandas, they took care to cut down all the nutmeg trees with a view to making the island as useless as possible to the new owners. Frequent also were the reprisals made by natives on the company for outrages for which none of the company's servants were in any way responsible. The company's vessels wore out rapidly in the tropical waters, and many a precious cargo disappeared beneath the waves on the hazardous homeward voyage. The "private trade" of the company's servants had greatly increased; one Boothby, for example, by such trading on his own account, was said to have made £30,000 in less than six years. In 1635 Charles I. trebled the customs duty on pepper; and so burdensome was this increase that the advisability of unloading in Holland instead of in London was seriously considered. As the company had paid no dividend on the Third Joint Stock, which had been subscribed in 1631, and as the Governor announced in 1634 that there could probably be none for a year or two more, the subscribers naturally became restless. They were inclined to lay the blame on the Governor and directors. In this case, however, the suspicions against the management appear to be without foundation. There seems to have been neither graft nor reckless expenditure. On the contrary, during these lean years, the salaries of officials were scaled down so that the secretary, for example, received only £100 a year instead of £120.

Of the many matters recorded in these minutes none appears so frequently as Charles I.'s grant of trading privileges to the wealthy and influential group of interlopers commonly known as Courteen's Association. That this grant infringed the monopoly promised to the East India Company in its charter made no difference to Charles. His good will had been won by the interlopers through that "poetaster, courtier, speculator, virtuoso, patron of the muses and of the Olympic games on the Cotswold Hills," Sir Endymion Porter. In the new association Charles put his name down for £10,000, but never paid the money. He had committed himself to Porter's schemes without any clear perception of the harm they were likely to do the existing East India Company or the resentment they would arouse; and when once these things became manifest his pride would not allow him to draw back, and he took refuge as usual in tortuous diplomacy. The result was that he satisfied nobody, and only increased the mistrust with which he was regarded by a large part of the nation. After reading about all his vexatious delays and evasions, one is inclined to judge him more severely in his relations to the East India Company than Sir William Hunter has done in the second volume of his "History of British India." Hunter, we may add, has also exaggerated Paul Pindar's part in Courteen's Association.

Science.

On the Witness Stand: Essays on Psychology and Crime. By Hugo Münsterberg. pp. 265. New York: The McClure Co. $2.50 net.

Each attempt to popularize a science raises the question whether the result is likely to be advantageous to the public or helpful to the development of the science itself. Prof. Percival Lowell's writings in relation to Mars are cases in point. It is not obvious that the public has gained materially clearer conceptions of the aims and methods of astronomy as the result of these publications, nor certain that Lowell might not better have devoted his time to the search for proofs which would bring conviction to the minds of his own professional brethren. The book before us raises the same questions in another field. Is it advantageous to the science of psychology to present to a wide public certain considerations the full import of which are not clearly understood even by the experts? Is it advantageous to the public to be induced to read fascinating tales which cannot but unsettle many a conviction without giving any to replace it, and which must yield to a majority of readers a sense of bewilderment which carries with it either utter scepticism or hopeless credulity?

The matter treated in the chapters on "Illusions," and on the "Memory of the Witness," is important and timely. The public should surely be taught to realize that we must abandon the old-fashioned store house theory of memory, which leads most people to assume that a memory record is invariably correct. The average man of intelligence should be taught what the psychologist knows so well, that each memory drawn out of that supposititious store-house is more or less corrupted by the moth and rust of time, and that to it cling accretions that did not attach to it when the hypothetical storage took place. If men generally realized the frequency of the occurrence of illusions of memory we should have much less uncritical acceptance of records of premonitory dreams, of spiritualistic phenomena in general, and of thought transference theories.

On the other hand, the main contention of the book is open to serious question. Notwithstanding the casual waiver (p. 108), "there is probably no one who desires to increase the number of 'experts' in our criminal courts," the general reader will surely think that the author intends to urge that the time is ripe for the courts to call upon psychological experts to determine the nature of the facts described in diverse ways by different witnesses, and to settle questions of veracity. He speaks slightingly of the "science" of the handwriting experts (p. 46); but, apart from a few very exceptional cases, it is exceedingly doubtful whether it would be possible to present to the court any results in relation to memory, or to power of perception or attention, or to associations, to volition or suggestibility, which would be more conclusive than those in relation to handwriting. In the one case as in the other, high authorities at this date would surely be found to disagree—a result which would not only tend to the greater bewilderment of juries, but would be prejudicial to the interests of psychology itself.

Professor Münsterberg, at the time of the writing of the last chapter, would probably have argued from certain perturbations in the modes of activity of a witness or patient that the latter had been taking small amounts of alcohol; but the latest experiments of Dr. W. H. R. Rivers of Cambridge, England, tend to show that the experiments upon which this judgment would be based warrant no such conclusion, for it appears that the perturbations of motor energy referred to are not discovered if the patient is kept in ignorance of the fact that he has taken alcohol, this showing that the effects recorded by the delicate instruments referred to are due to expectant attention rather than to the stimulant imbibed. In another connection (p. 132) the author himself acknowledges that "experiment gives us so far not sufficient hold for the discrimination of the guilty conscience and the emotional excitement of the innocent"; and similar doubts may well be raised in relation to the conclusions to be drawn at this time from the other experiments to which he refers.

On the whole, it seems clear that we are not yet prepared to apply psychology in judicial procedure, and that we are warranted in begging the experimental psychologists to forego any suggestion that such application be made until they are more settled in their convictions than they are to-day.

A life of Lord Kelvin has been prepared by Prof. Andrew Gray, who succeeded him in the chair of natural philosophy at Glasgow. It is soon to be published in Dent's English Men of Science.

The Outing Company will publish in a few days a book on "Training the Bird Dog," by C. B. Whitford.

The remarkable scientific work of the late King Don Carlos of Portugal, as described by Sir C. R. Markham in the *Geographical Journal* for May, had for its aim the good of his people. Being deeply impressed with the importance of the fisheries to a large section of his subjects, he began in 1896 to make a methodical study of the distribution of different kinds of fish, the periods of their arrival, and of their habits. For eleven years he personally conducted oceanographic campaigns on his yacht Amelia, sounding, dredging, and collecting specimens of fish. In addition to this work he conceived a plan for preparing a complete manual of the *avi-fauna* of Portugal, two parts of which, on the thrushes and warblers have appeared. They contain notes on each bird, recording the King's observations of its first appearance and departure, locality, and habits, together with thirty-nine colored plates. His published works, giving the results of his investigations, are eight in number, and are described on the title-page as simply by Don Carlos of Braganza.

Houghton, Mifflin & Co. have issued Part ii. of Vol. II. of "Trees and Shrubs: Illustrations of New or Little Known Ligneous Plants," prepared chiefly from material at the Arnold Aboretum of Harvard, and edited by Charles Sprague Sargent, director of the Arboretum. In every respect this part keeps on the high level of its predecessors. The mechanical execution leaves nothing to be desired, in plates, printing, or paper. Mr. Faxon's remarkable drawings are as telling as ever. As we have said before, Mr. Faxon has the happy faculty of transferring to paper the characteristic features of his plants, and presenting them with a sort of stereoscopic effect which frees his plates from flatness; he also exhibits extraordinary skill in detecting and depicting minute differences and in emphasizing details without producing confusion. This phase of the artist's skill properly accompanies the exactness which characterizes the descriptive text by Professor Sargent and his coadjutors. Of the twenty-five species here figured and described, ten belong to the genus Crataegus and thirteen to the genus Viburnum. Of the former genus, the hawthorns, all these forms are separated by very slight distinctions; but these are so carefully stated and so strongly insisted upon, that their sum in each instance makes out a pretty good case for the integrity of the species. In many of the recently published botanical descriptions, exact measurements are becoming more and more prominent, much as they have long been used in descriptions of birds. At first, it would seem an idle task to measure and record the precise length and breadth of a ripe fruit of a thorn, but it is only by such exactitude that we can ever reach a clear notion of the range of variation. While, therefore, we cannot agree with the conclusions which the editor of this work reaches, in regard to the limits of his species of hawthorn, we cannot insist too strongly upon the value of these descriptions as a distinct contribution to a neglected part of biology. Recent reëxamination of many of our variant species has made clear the existence of diverse forms which are probably *species in the making*. Every attempt to conduct a canvass of such forms and to place on record their differences, no matter how slight, is useful and important. It should be still further said that all of Professor Sargent's study in the recognition and description of slight variations is almost as valuable as a contribution to biometry as it is to systematic botany. Students of variation in general may well keep watch of these rapidly accumulating species, or "races," or "forms," or whatever they may ultimately be called, for Professor Sargent is placing in their hands much valuable and hitherto unattainable material in an attractive shape.

The handy volume of Dr. John S. Milne on "Surgical Instruments in Greek and Roman Times" (Henry Frowde) is not only an attractive study of the subject, but also welcome evidence of a growing interest among British practitioners in the history of medicine. From all available ancient authors who touched on medical matters Milne has collected the references which throw light on the description or use of an appliance. This material he supplements by illustrations from the more important museums and collections of Europe. In the text the instruments are grouped under suitable divisions, but no account is taken of devices for the reduction of deformities, or of splints and related appliances, which the writer puts in a class by themselves as requiring special treatment. There are fifty-four plates on which some two hundred objects are figured by a photographic process whose results are for the most part clear and convincing. Of these figures rather more than a fifth reproduce objects in the museum at Naples, and nearly another fifth seem to belong to the private collection of the author, who, however, gives very little indication of where they were found. The explanation (p. 61) of the spoon, or scoop probe (cyathiscomele) in the Naples museum, misinterpreted by Vulpes and his followers for sixty years, seems plausible and happy. Although the book itself is well indexed, the plates are not indexed, so that to find any figure is a matter of some difficulty. The bibliography, which appears to have been put together somewhat hurriedly, pays too little attention to journalistic literature, such as the articles in Rohlf's Archiv and elsewhere. One gets the impression that the Roman finds have not been fully examined, particularly those described by Scalzi, about twenty years ago. That Dr. Milne has overlooked, or, at least, does not refer to, the Servian find to which Gérzetic devoted a pamphlet in 1894, is not a serious fault.

"Astronomy with the Naked Eye," by Garrett P. Serviss (Harper & Bros.), aims to recall to busy men a branch of astronomy—the earliest astronomy of all—which has in these later years fallen into disuse. "More and more it is neglected," writes the author, referring to astronomy in general. "The public schools do not teach the constellations and do not tell their pupils where and when they should look for Sirius, Aldebaran, or Arcturus." The book must prove useful, for it is the first of its kind for many years. It takes the constellations month by month, describes them and places them in the heavens, and refers to a convenient chart for the configurations. Nor does the work stop here, for the constellations are but the frame-work on which to hang a wealth of folk-lore, tradition, history, literature, and poetry. Mr. Serviss is a clever writer, and the text is trustworthy, for the author has himself helped in a modest way in astronomical research; but the material is assembled in heterogeneous fashion, and the index is very imperfect. The typography of the volume is good and the charts, a reduction of those of Heis, are excellent.

With the change of the Munich *Allgemeine Zeitung* from a daily to a weekly, the famous scientific *Beilage* also disappears in its historic form. The publishers announce that the contents of the supplement will in part be published in the *Zeitung* itself, and partly in the *Internationale Wochenschrift für Wissenschaft und Technik*, edited by Prof. Paul Hinneberg, of Berlin.

From Berlin comes news of the death of Prof. Karl August Möbius, in his eighty-fourth year. From 1853 to 1868 he was a teacher in the Johanneum in Hamburg; from there he went to Kiel as professor of zoology, and to Berlin in 1887. Besides other works, he has published "Fauna der Kieler Bucht," "Fliegende Fische," "Die Fische der Ostsee," "Ästhetische Beurtheilung der Säugetiere, Vögel, Insekten."

Charles-Édouard Chamberland, devoted assistant of Pasteur and popularly known for the filter which bears his name, has died at the age of thirty-seven. Among his works are "Le Charbon et la vaccination charbonneuse, d'après les travaux récents de M. Pasteur" and "Les Eaux d'alimentation dans l'hygiène et les maladies épidémiques."

Drama.

Early next month the Oxford University Press will publish an edition of the six plays of Terence, prepared by Prof. Sidney G. Ashmore of Union College. Besides its notes this volume will contain an extended Introduction on the subject of ancient comedy.

Ernst Rosmer (Frau Elsa Bernstein of Munich), whose "Königskinder" was compared to Hauptmann's "Versunkene Glocke," has not repeated the success of that remarkable work. Her latest play, "Maria Arndt" (Berlin: S. Fischer), is a variation upon a theme that seems to haunt her—the jealousy with which a child regards a new love interest in the life of the parent. In an earlier work, "Dämmerung," the daughter interferes when the widowed father contemplates taking a second wife. In "Maria Arndt" the daughter interferes when the mother, long estranged from the husband, is about to embrace the happiness which the devotion of a lifelong friend offers. The difficult problem is treated with a moderation that contrasts sharply with the usual rant of modern problem plays. The characters are well delineated. The moral is not too obviously pointed.

Emil Strauss, the author of one of the most popular German novels of recent years, "Freund Hein," has written a play on the subject of a conventional marriage arranged by a greedy father between his young daughter and an old wealthy friend, "Hochzeit" (Berlin: S. Fischer). The latter's philosophical acceptance of her elopement with his nephew, the father's wrath on seeing his air-castles crumble, the bizarre personality of the young man who prefers a cave in the woods to a niche in his uncle's house—all this has elements of humor which relieve the seriousness of the problem. The story is presented with a simplicity which, but for the romantic episode of the cave, impresses one as a dramatized incident from real life.

It seems likely that there will be a Dramatic Authors' Society in England before long. Formerly there used to be a Dramatic Committee of the Authors' Society, but now the dramatists are beginning to feel that they need some kind of organization to look after their interests. One object which they have in view is war upon the censor. About seventy playwrights have expressed approval of the new organization, and a special committee is at work upon a constitution and by-laws.

Paris has been much interested in what is known as the Affaire du Foyer. MM. Octave Mirbeau and Natanson are the authors of a play called "Le Foyer," which, after having been accepted by M. Claretie for the Théâtre Français and rehearsed seventeen times, will not be given at that theatre unless the judges order it. The reason is that M. Claretie, after the refusal of the authors to make certain alterations which he thought indispensable, stopped the rehearsals and withdrew the play, on the ground that it was a libel on the French Senate. The authors plead that their play was accepted as it stood and without conditions. They add that M. Claretie, in refusing to continue the rehearsals, owing to a passage which he regards as objectionable, is acting less within his rights as director of the House of Molière than in his own private interests. They ask the courts to compel him to resume the rehearsals. It is thought that any curtailment of his authority would result in M. Claretie's resignation.

Music.

The Life and Works of Tchaikovsky. By Rosa Newmarch and Edwin Evans, Sr. New York: imported by Charles Scribner's Sons. $2.50 net.

Richard Wagners religiöse Weltanschauung. Von Otto Schmiedel. Tübingen: J. C. B. Mohr.

God and Music. By John Harrington Edwards. New York: Baker & Taylor Co. $1.25.

Tchaikovsky died in 1893. Six years later, no adequate biography having been written of him, Rosa Newmarch, the leading English authority on Russian music, prepared a volume in which she briefly told the story of his life, and followed this up with chapters containing extracts from his writings, an essay on his musical criticisms, some pages on his attitude toward Russian art, and a translation of the interesting diary he wrote of his tour in 1888. The appearance of the Life and Letters of Tchaikovsky by his brother Modeste, of which Mrs. Newmarch brought out a condensed English version in 1906, by no means made this earlier volume superfluous, for it contains much that is not included in the Life and Letters, in which the emphasis falls on the letters. Mrs. Newmarch's book is now reissued with nearly two hundred additional pages by Edwin Evans, who discourses in six short chapters on Tchaikovsky, under the heads of Instrumentation, Form, Idealism, Nationalism, Individuality, and Criticism. Mr. Evans is somewhat old-fashioned in his taste; to him the sonata form, which most composers have now abandoned or subordinated, seems to be the one perfect thing in music; and he is no great admirer of programme music. Yet this does not prevent him from being enthusiastic over a composer to whom the sonata form was a hindrance rather than a help, and who contributed some of the most successful examples of programme music. What attracts Mr. Evans particularly is the rare melodic gift which enabled Tchaikovsky to attain to that supreme and rarest achievement of creative genius, the writing of works which please alike the educated and the uneducated public. Such works, as he justly says, "have always been produced by composers of strong individuality; and, even by them, at moments of intense earnestness." Mr. Evans then proceeds to analyze four of the Russian's greatest works, the piano trio, opus 50, the piano concerto, opus 23, and the fifth and sixth symphonies. To the sixth he devotes no fewer than fifty-four pages. There is much that is of interest and value in these analyses, but also not a little that is no better than parsing. Why write pages of explanations which are intelligible to those only who do not need them?

Interesting as Tchaikovsky is, both as a man and a composer, it is not likely that the literature concerned with him will ever in extent reach more than 3 or 4 per cent. of that which is concerned with Wagner. So numerous are the books relating to the Bayreuth master that there is little hope of securing attention for any new contribution unless it is a special study of some particular phase of his life or activity. A monograph of this kind is Otto Schmiedel's sixty-four-page book on Wagner's religious views. The author confesses that it was not Wagner's music or his poetry as such that first attracted him, but a common interest in Buddhism. Herr Schmiedel is an excellent writer, clear and incisive, and nothing could be better than the first two pages, in which he sums up the many seemingly inconsistent traits in Wagner's character. The utterances on religion, too, if cited at random without reference to the time of their expression, would seem often contradictory; our author therefore connects them with a brief sketch of Wagner's life, dividing it into four periods, each of which was characterized by a special attitude toward religion. In the first period, ending with 1849, and including the operas up to "Lohengrin," Wagner appears to have been animated by the usual feelings current in a Christian community; that they were of considerable depth our author infers from the fervent prayers which occur in all these early operas. In the second period Wagner came under the influence of Feuerbach, which made him a revolutionary and an atheist. In his letters to Liszt he made some "almost blasphemous allusions to God and immortality," which were cut out when the letters were printed. Schopenhauer and Buddhism influenced his third period; and in the fourth he returned to the Christian fold with his "Parsifal." Herr Schmiedel illustrates his thesis by numerous short excerpts from Wagner's letters, poems, and prose writings, and his book is altogether one of the most valuable contributions to the Wagneriana of the twentieth century.

"God and Music" is a book of an altogether different character—vague, dogmatic, diffuse, and rather tiresome. The author's object is to "give reasonable proof that music, by its constitution, correlations, and effects, discloses a Supreme Being." He thinks it remarkable that the theological value of the whole territory of æsthetics has been so little appreciated; but his chapters do not make it appear as if this were a particularly fertile field. An argument like this, that "nothing but soul can put soul into music, and the soul is God's work," may convince a believer; an unbeliever will call it a *petitio principii*. The agnostic Huxley suggests a more convincing line of thought:

> One thing which weighs with me against pessimism and tells for a benevolent author of the universe, is my enjoyment of scenery and music. I do not see how they could have helped in the struggle for existence. They are gratuitous gifts.

It is quite true that, in the words of Carlyle, "all nations that can listen to the mandates of nature have prized music as their highest vehicle for worship, for prophecy, and for whatever in them was divine"; but in arguing (p. 76) that there can be no true appreciation of music apart from religion, Mr. Edwards ignores the David Friedrich Strauss movement which would practically substitute æsthetics for religion. Our author's bird-song philosophy is not deep, and he betrays a quaint lack of the humorous sense in remarking, while describing a series of experiments on animals, that "the violin suited the animal auditors best of all, which shows a fine appreciation." The best chapter in the book, and one well worth reading, is that in which the author sums up the evidence showing that music has a true therapeutic value. He quotes one hospital superintendent who declared that nothing can give so much pleasure to the patients, or add so much to the reputation of a hospital, as the maintenance of a good musical organization.

J. S. Shedlock has translated Dr. A. C. Kalischer's edition of "Beethoven's Letters," and the work will soon be published by Dent. This is the first complete edition of the letters in English.

The new management of the Metropolitan Opera House announces that next year there will be two orchestras, one of sixty players, for the simple Italian operas, and another of ninety for the spectacular operas and music dramas. The combined orchestra will be used for a series of concerts to be conducted by Mahler and Toscanini. Next season's novelties will be selected from a list including D'Albert's "Tiefland," Catalani's "La Vally," Smetana's "Die verkaufte Braut," Goldmark's "Das Heimchen am Herd," Puccini's "Le Villi," Dupont's "Cabrera," Bruneau's "L'Attaque du moulin," Tchaikovsky's "Pique-Dame," and Lapara's "Habanera." The revivals will include Verdi's "Otello," Bizet's "Carmen," Mozart's "Le Nozze di Figaro," and Massenet's "Manon." The conductors will be Hertz, Mahler, Toscanini, and a young Italian, whose engagement will be announced later.

The sum of $252 was paid at a recent auction sale in Berlin for a letter written by Mozart, near the end of his life, to Puchberg, in which he said:

> You are right, my dear friend, to leave my letters unanswered. My importunity is too great, but try and realize the terrible position I am in and forgive me. If you could help me just once again out of this momentary difficulty, and, oh! I do implore you to do so, for the love of God; I would be grateful for the smallest donation which you could give me.

To this cry of distress Puchberg answered by sending twenty florins.

Sir Walter Parratt has been appointed to the professorship of music at Oxford, succeeding Sir Hubert Parry.

Art.

Allgemeines Lexikon der Bildenden Künstler von der Antike bis zur Gegenwart. Unter Mitwirkung von 300 Fachgelehrten des In- und Auslandes, herausgegeben von Dr. Ulrich Thieme und Dr. Felix Becker. Vol. I., pp. xii., 600. Leipzig: Verlag von Wilhelm Engelmann; New York: G. E. Stechert & Co.

The object of this dictionary, as announced by the editors, is to treat of the artists of every civilized land and of every epoch. To cover that broad field twenty volumes will be needed, containing about 150,000 names. The arrangement is on the plan of Dr. Julius Meyer's "Allgemeines Künstlerlexikon," a work which, planned as a revision of the great Nagler Dictionary of our youth, has never been carried beyond Bez. The three published volumes of Meyer, 1870-1885, will be utilized, though in revised form, and with many items enlarged and brought down to date. The great scale on which the book is planned is encouraging, for "room to turn round in" is a primary need in any such undertaking. Fifteen pages is allotted for the most important and interesting subjects. The names of the collaborators, many of them directors of museums, curators, and other specialists, make a list almost eight columns long, and they are of various nationalities.

Volume I., now issued, containing Aa to An, is an octavo with pages 7x10¼ inches, of pleasantly opaque and not glossy paper. The work includes, in addition to biographies of painters, engravers, sculptors, and architects, those of goldsmiths, gem cutters, illuminators of manuscript, lithographers, potters and china painters, bell-founders, and workers in many artistic crafts. It is not surprising that the book should give more names than Seubert's "Künstlerlexikon," for of that valuable compendium even the edition of 1895-1901 consists of but five thin volumes. This volume also includes more names of English painters and engravers than Bryan's Dictionary, five huge volumes, 1903-5; and more names of French artists than the French biographical dictionaries. Of living Americans we find mentioned thirty-five or more out of the fifty given by an American directory of artists. But among architects there are only four names out of the fifty given by our directory; and among the omissions are two, or perhaps three, names which no such book should fail to include. But this is a minor defect The countries whose art workers are less well known are also liberally represented.

A bibliography follows almost every article of importance. The list appended to the account of Anthemios (architect of Hagia Sophia, Constantinople) is an admirable piece of research. Under Andreani, wood engraver and maker of famous chiaroscuro prints, the list opens up the whole literature of the controversy about his signature and his personality. For Leon Battista Alberti, the great forerunner of the Italian classical revival, there is a bibliography of his life, one of his writings, and one of his known works of architecture. A noticeable feature is the signing of many biographies with full names, while perhaps an equal number have as a signature a triangle, or else one, two, or three asterisks. Those marks of identification must surely be tabulated in a later volume; for nowhere in the book before us is there any explanation of them. Possibly these denote the editorial contributors—the writers of the home office. Dr. William Bode, C. Enlart of Paris, Dr. Suida of Vienna, Supino of Bologna, and Mrs. Strong who was once Eugénie Sellers, are always excellent writers.

It is unfortunate that the English used in the bibliographies and elsewhere was not edited by one familiar with that language. There are a number of small mistakes in proof-reading.

"Building a Home," by H. W. Desmond and H. W. Frohne, a work of 222 pages, is published by the Baker & Taylor Company. Probably every man in moderate circumstances hopes some day to build for himself a house exactly suited to his needs, and even those who have no such aspiration find it enjoyable to glance at the pictures of charming country houses. To this large body of readers this attractive work will appeal. The authors intend it to be "a book of fundamental advice for the laymen about to build"; and in general the advice seems to be sound and worthy of attention, although the word "fundamental" seems somewhat inappropriate. In the estimates of cost on p. 31 an error has crept into the "per cubic foot" column, where the word dollars should evidently read cents, an error which is likely to mislead the unknowing reader, to whom the book is supposed to appeal. In general, it may be said that estimates of cost can scarcely be held to be of value where the authors find it necessary to warn the reader that "the figures are perhaps 25 per cent. too low."

"Geschichte der Goldschmiedekunst auf technischer Grundlage," a valuable work on the history and technique of the goldsmith's art, by Dr. Marc Rosenberg, founder of an industrial art museum at Karlsruhe, is being published by Heinrich Keller of Frankfort-on-the-Main. The introductory volume, which appeared in March, gives, in general outline, the history of the winning of gold and silver, and even the costumes of the miners in different lands. It also treats of the qualities of gold and silver as adapted to artistic workmanship, the older standards of fineness, a large number of heretofore unexplained hall-marks of the Byzantine and Renaissance periods, and the historical development of the processes of gilding and soldering. The succeeding volume will contain specimens of cast and wrought gold and silver, and will explain and illustrate stamping, granulation, filigree work, interasile, incrustations, and all varieties of enamelling. One section of this work now in print treats of niello, that peculiar metallic mixture, a sulphide of silver and copper. It is apparently unalterable even when the metal which it serves to decorate has itself been changed to cerargyrite (horn silver, a chloride), or to a natural sulphide. Perhaps the first work in niello that is known appears in the inlays of an axe and a dagger of the Pharaoh Ahmose of the XVIII. Dynasty (1530-1320 B. C.), and also in the similar treatment of a falcon's head which belonged to Ahhotep, the mother of Ahmose. These examples are now in the Galerie des Bijoux, Cairo. The history of the art is traced from this early period to modern times. Among the specimens of mediæval art, one of the most interesting is the cross of Monza, given both in photogravure and color in the Dom Treasury of Mornza. It bears an extremely archaic representation of the figure of Christ, with a cruciform halo. Dr. Rosenberg inclines to the belief that this cross dates from the eighth century, although tradition states that it was given by Pope Gregory the Great to Theodolinda for her son Adulouuald, later King of the Longobards. Another remarkable specimen of early niello work is the cross of St. Trudpert, executed about 1200. Though the representation here is still very primitive it testifies to considerable progress, and may remind us of the nearly contemporaneous paintings of Cimabue. These examples are cited only to give some idea of the quality and range of the material presented in the work of Dr. Rosenberg. The folio section already issued is beautifully printed and is enriched with many finely executed illustrations, both in photogravure and in colors.

The latest of the Knackfuss Künstler-Monographien to reach us (imported by Lemcke & Buechner) is by Hans Wolfgang Singer, and deals, with the profusion of illustration usual in this series, with the little masters of engraving, Aldegrever, Altdorfer, and the rest.

From E. Gutekunst, of Philadelphia, we have received a large photographic portrait of the late E. C. Stedman, suitable for framing.

The American Exploration Society will publish the results of excavations by the Wells-Houston-Cramp expeditions to Crete in a form attractive to collectors as well as to archæologists. The publication is edited by Mrs. C. H. Hawes (Harriet A. Boyd), who headed the three expeditions. More than 500 objects are classified and illustrated on twenty-four photogravure plates, eleven in color. The yield of the soil at Gournia, Vasiliki, and other prehistoric sites is fully described (with plans), and readers are given a synthesis of Cretan discoveries and the links which connect these discoveries with the ancient civilization of Egypt and with the youth of Europe.

The German Emperor has given Professor Dörpfeld, director of the German Archæological Institute in Athens, $1,250 for the purpose of starting excavations on the site of the ancient Pylos, which Dr. Dörpfeld places at some distance from the modern Pylos. A portion of a palace, believed to be that of Nestor, was discovered there last year.

The Imperial Ottoman Museum of Constantinople is making systematic excavations on the territory of Notion, south of Giaurkjāi, in Asia Minor. Up to the present time the work has consisted chiefly in laying bare the remnants of the temple of Apollo Clarios. Thus far the finds include inscriptions showing the purpose of the building, tombs of various kinds, jewelry, some of pure gold, instruments in bronze, and terra-cotta figures.

The mosaics of S. Sophia at Saloniki, which have hitherto been covered with crude paintings and inscriptions from the Koran, have been successfully cleaned by the French architect, Le Tourneau. The figure of Christ in the central dome appears to be a work of the middle of the seventh century; the Madonna in the apse belongs to the eighth century. The mosaics will prove a valuable addition to our knowledge of Byzantine art.

The death is announced from Berlin of the artist Charles Frederic Ulrich, in his fiftieth year. Mr. Ulrich was born in New York, and got his first lessons in art at Cooper Institute, and the National Academy of Design. From here he went to Munich, where he studied under Loefferts, Lindenschmidt, and Leibl. He returned to New York, and was elected an associate of the Academy in 1883. Of late years he has lived much in Venice. Among his better-known pictures are Wood Engraver (1882), Spinner (1882), Glass Blowers (1883), Waifs (1885), and Relics of Bygone Days (1885).

Finance.

THE STOCK EXCHANGE AND TRADE REVIVAL.

When prices on the Stock Exchange, in January and February, advanced 10 per cent., or thereabouts, with greatly increased activity both in stocks and bonds, Wall Street speculators began to talk of immediate revival of the "boom" interrupted by the collapse during 1907 and the panic of October. Financiers of more judgment and experience answered that this was a rather hasty jumping at conclusions. They pointed out that the rise in prices had followed resumption of payments by the banks and restoration of the machinery of credit, and that the buying of securities was a necessary consequence of such return to normal banking. So long as credit facilities were cut off, the investing community was not only unable to buy stocks largely, but was frequently forced to sell to meet its business engagements. It was natural, therefore, that with the money market again in working order, the selling of stocks should cease and a certain amount of legitimate buying begin. Moreover, a rise of this sort had occurred, on resumption of bank payments, a month or two after each of our financial panics.

As a matter of fact, it soon turned out that the "January rise" had not correctly foreshadowed trade revival, except such as came when absolute stagnation gave way to gradual resumption of hand-to-mouth operations as the banks began to lend again. Indeed, the visible indices of trade movements during March and April, and up to the present date in May, showed that industrial conditions were growing worse instead of better. The Steel Corporation's recent report for the first three months of 1908 showed that, on March 31, orders on hand for future delivery were 859,000 tons below December 31, and 4,278,000 tons, or 53 per cent., below March, 1907. Still later reports showed that the country's iron production in April was nearly 3,000 tons per day below that of March, and 31,000 per day, or 42 per cent. below April of last year. A week ago, the Railway Association reported that idle cars, whose number had fallen from 344,000 on February 5, the maximum of the winter season, to 297,000 on March 18, had increased to 414,000 at the close of

April. Production at the New England cotton mills, in the middle of May, was less than one-half the 1907 rate of output. Business failures in April were 60 per cent. more in number than in April, 1907, and, in both number and liabilities, were the largest of any corresponding month in our history. Our foreign trade in April, on which the government reported this past week, showed shrinkage of $66,000,000 from April of last year, and was $80,000,000 less than last January. April's exchange of checks at the country's clearing-houses fell short 23 per cent. of 1907. The national Treasury's deficit for the month was larger by 70 per cent. than in any month since the panic.

Here was apparently a picture of uninterrupted depression. Yet on the Stock Exchange, a second upward movement began at the close of April, and has continued, with increasing rapidity and violence, ever since. During the past week, speculation for the rise became more excited than at any time since the famous "Union Pacific boom" of August, 1906. "Million-share days" have again become commonplace. Prices of stocks, in their furious advance, have not only recovered all the losses since the outbreak of panic, but this week rose higher than they have been since March and May last year. Once more, as in the "boom times" of 1901 and 1906, Wall Street began to hear of a group of enormously wealthy financiers engaging in speculation on an extensive scale, and of obscure speculators who had made sudden fortunes. The stock market of January had plenty of after-panic analogies in other periods; it would be difficult to find one for the stock market of May. What did it mean?

The question is important; because, whatever may be the incidental vagaries of Stock Exchange speculation, a prolonged movement in one direction is commonly taken, by all experienced business men, as something of an index to the industrial future. The rise in stocks has been so accepted, though with more or less reservation, by the commercial community; and it has led to a rather general feeling that at all events the worst is over. Much of this spirit of reviving confidence has had its origin in the unquestionably high promise of the growing crops; even Mr. Harriman, who is reputed to be a believer in the brute force of capital, declared last Saturday that "the basis of prosperity in every country is the product of the soil, and the crops here could hardly be better." The crops have not yet been harvested, and there are chances of unpleasant accidents between now and the end of August; still, as matters stand, the agricultural outlook is more encouraging than in any previous season following a panic.

The question remains, whether this much of actual encouragement is a sufficient basis for the violent rise on the Stock Exchange; or, to put the matter in another way, whether the sharp recovery in Wall Street is a fair forecast of trade recovery. Cautious observers will be slow to adopt that inference in full. It has been recognized all along that the soundness of the currency, the well-fortified position of the national Treasury, and the wealth of the interior communities, were mitigating influences which have never before appeared immediately after a panic. But to assume that they can offset—in a shorter time than intervened between the moderate financial reaction of 1903 and the trade recovery at the end of 1904—the influence of so ruinous a collapse of credit as occurred last autumn, would be assuming much. The Presidential election, traditionally an unsettling factor in business, lies just before us. Europe's mistrust of the Stock Exchange "boom" itself has been expressed, not only by the refusal of great banking houses to finance any more American railway loans at present, but by the outflow from New York to Europe, within a week, of the extraordinary sum of $16,000,000 in gold. And as yet, the visible signs which experienced watchers habitually accept as the pulse of trade, have shown no evidence of quickened activity.

* * *

Horace J. Stevens's "Copper Handbook: a Manual of the Copper Industry of the World," published by the author at Houghton, Mich., is now issued for the seventh time. Considering the inevitable changes in this branch of the mining industry, this useful work of reference is, as far as possible kept up to date. The present volume contains the familiar introductory matter of former issues, dealing with the history, geology, chemistry, mining, grades, and uses of copper; a glossary of mining terms; and a series of reviews, by countries and continents, of copper deposits the world over. The remainder of the volume, nearly five-sixths of the whole, consists of an alphabetical list of the companies organized for copper mining, with a paragraph of comment upon each—often illuminating to would-be investors.

THE STUDY OF STELLAR EVOLUTION

An Account of Some Modern Methods of Astrophysical Research

By GEORGE ELLERY HALE

CONTENTS

The Problem of Stellar Evolution
The Student of the New Astronomy
The Sun as a Typical Star
Large and Small Telescopes
Astronomical Photography with Camera Lenses
Development of the Reflecting Telescope
Elementary Principles of Spectrum Analysis
Grating Spectroscopes and the Chemical Composition of the Sun
Phenomena of the Sun's Surface
The Sun's Surroundings
The Spectroheliograph
The Yerkes Observatory
Astronomical Advantages of High Altitudes
The Mount Wilson Solar Observatory
The Snow Telescope
Some Uses of Spectroheliograph Plates
A Study of Sun-Spots
Stellar Temperatures
The Nebular Hypothesis
Stellar Development
The Meteoritic and Planetesimal Hypotheses
Does the Solar Heat Vary?
The Construction of Large Reflecting Telescopes
Some Possibilities of New Instruments
Opportunities for Amateur Observers

The introduction of photographic methods, the improvement of telescopes, and the rapidly increasing appreciation of the value to astronomy of physical instruments and processes have revolutionized the observatory. From a simple observing station, it has been transformed into a great physical laboratory, where images of the sun and stars are studied with many powerful instruments, and celestial phenomena are experimentally imitated with the aid of electric furnaces and other sources of intense heat. The result has been a great gain in our knowledge of the origin, development, and decay of stars. This book explains in a popular way how the life histories of the sun and stars are investigated. 104 half-tone plates, made from the best astronomical negatives, place before the reader the most recent results of celestial photography in most of its phases. Professor Hale has shown a most unusual skill in the adapting of difficult material to the popular comprehension. After reading his fascinating chapters, the man of average learning will have a clear idea of the latest phases of theory and investigation in the most stupendous of all problems. 250 pages, 104 plates, 8vo, cloth; net $4.00, postpaid $4.27.

THE UNIVERSITY OF CHICAGO PRESS
CHICAGO and NEW YORK

The Nation.

NEW YORK, THURSDAY, MAY 28, 1908.

The Week.

Congress is expiring in a blaze of insincerity. The Democratic filibuster seems to have driven the Republicans to their neatest tricks. In parliamentary adroitness the old hands of the majority are undoubtedly the superiors of the Opposition, and have successfully dug several holes for the other side to fall into. On the currency bill, and again on the campaign-publicity bill, the cleverest tricksters of the Republican membership prepared snares for the Democrats, which left the latter both baffled and furious. It has been a gigantic battle over trifling side-issues. Partisans on the spot roar with delight over these manœuvres, and call them sailing to obtain the weather-gage of their opponents, but the country, so far as we have observed, remains like Marjorie Fleming's turkey, "most unusual calm." The whole crafty game of Congressional wits is supposed to be played for popular effect, but none of the great intellects concerned seems to have stopped to inquire what the real effect has been and will be. Yet we may be sure that, whatever the decisive issues of the coming campaign are to be, they will have very little to do simply with the tactics of debate, or the laying of traps in the transaction of public business. If there is to be any serious attack upon the Republican party's record, we may be certain that it cannot be met and repulsed by jubilant references to the way in which John Sharp Williams was caught napping, or to the astuteness of Dalzell in compelling the Democrats to vote against the very measures for which they had been clamoring. The work and the justification of a political party lie in something beside retorts and twitting, or an unreal and theatrical display upon the Congressional stage.

The great trouble with all these petty devices of the Republicans to hamper and enrage the Democrats, is that they lead nowhere. Made an end in themselves, they are worth nothing whatever. There is sometimes a warrant and a demand for the nicest strategy of parliamentarians. They may need to disentangle the issue at which they are driving, to give it the advantage of position or precedence, and so to arrange the order and details of discussion as to compass their object. But in such a case it is always understood that the means are to an end, the road to the goal; the tactics merely precede and smooth the way for final action. In all these sly bills and resolutions of the Republicans in Congress, however, there is no pretence that anything will be completed. The manœuvring to get the wind goes on briskly, but there is no closing to battle. It is as if Nelson had tacked and filled in order to get the French and Spanish ships at Trafalgar where he wanted them, and then had made off for England in triumph without firing a gun. None of the measures about which the Republicans have so exulted in getting the better of the Democrats are made laws, or will be; yet it is expected that great will be the "effect"! No one should imagine that the people can be deceived in any such way. They may laugh at the "smartness" of rival politicians, but they know that the real business of government is something different. It is not the sharp contrivances or the angry recriminations of Representatives in Congress that impress the popular mind, so much as large and sober policies painstakingly wrought into law. Compared with Mr. Roosevelt's far-sighted schemes in reference to irrigation, and forest preservation and the improvement of our waterways, all the jollifications of the Republicans at Washington over their success in putting the Democrats in a parliamentary hole, are but as the crackling of thorns under a pot.

The extravagance of the projects urged at Washington this session is a subject on which we have dwelt more than once—the proposal to lay down four battleships at a cost of about $10,000,000 apiece, and the public buildings bill ("the pork barrel") with its appropriation of some $33,000,000. Advocates of economy may be interested to learn that the Bureau of Education is to secure an increase of only $1,250 over the amount for the current year. Of this addition, $250 is for books for the library and for completion of valuable sets of periodicals. The $1,000 is to raise the salary of the Commissioner of Education, who will henceforth get $4,500. This is less than the pay of a full professor at Harvard, or of a superintendent of schools in a city of 100,000 inhabitants. The Commissioner of Education, however, like other high officers at Washington, is expected to find his reward in serving his country and securing professional distinction. No appropriation whatever was made for the investigation by the Bureau of Education of special educational problems, for which purpose the Secretary of the Interior strongly requested $40,000. We venture to say, however, that every $10,000 spent by the Bureau brings a richer return to this country than every $100,000 expended on the navy. But the needs of the Bureau do not appeal to those men who love noise and parade and the shouts of the Jingoes.

Without asserting that the Hon. James Guffey of Pennsylvania is the highest type of the American statesman, we cannot but feel that the Democrats of Pennsylvania, in following his leadership and resisting the Bryan craze, have done well by their party and the country. Their action must intensify the regret that the sound elements in the party did not begin to work for Gov. Johnson some months ago. His remarkable, even though unsuccessful, run in Alabama, shows, the more it is studied, how eager the rank and file of the party are to vote for some one beside the man who has been defeated twice, and whose nomination will bring an access of strength to the Republicans. It will be gratifying, if Pennsylvania, New York, and other important States record their protests in the convention against Bryan. Otherwise, the Democracy will be completely committed to a political harlequin.

Timid souls who have been afraid that the President was getting a little lax on the subject of civil-service reform, will be cheered up by the news from Albion, N. Y. The postmaster there has been removed for "pernicious activity." It seems that the audacious man neglected his official duties in order to "round up delegates" for Wadsworth in his fight against Congressman Porter. The stern President would not have such meddling in politics by Federal officials, and promptly cut off the head of Postmaster Coan. This shows what a pity it is that nobody ever called Mr. Roosevelt's attention to the hundreds of postmasters who have been hunting delegates for Taft. Of course, he would have decapitated them all if he had only known what they were doing.

Vigorous opposition by the organizations of interior merchants has apparently called a halt on the plans for increasing railway freight rates in order to meet reduced demand for transportation. The latest argument to be presented in favor of the step is that the proposed higher rates are not to be used for dividends, but to keep up the standard of wages and the standard of transportation facilities. The increase as suggested would average up to a per capita tax of $1.61 on every man, woman, and child in the country; and who can reasonably object to such a tax for such a purpose? It is "a defensible distribution of an economic burden." The trouble with this argument, as with all other efforts seriously to justify an advance in prices because of reduced demand, is that it proves too much. Certainly, the manufacturer is as deeply interested in keeping up wages and maintaining his plant as is the railway president; therefore, according to this newly-discovered economic logic, a 50 per cent. reduction in his sales ought to be met by increasing prices one-half. Hard times, poverty of the people through agricultural disaster or trade reaction, loss of markets through the distresses of foreign purchasing communities, should be the signal for exacting higher prices on all merchandise. No one can fail to recognize the absurdity of this idea. Had it been seriously proposed, say, in the January conferences of the New England cotton mills, the reply would, of course, have been, first, that such an advance would go far towards killing such feeble purchasing power as remained; second, that any manufacturer who tried to put it into practice would promptly have been driven out of business by competitors who retained possession of their senses. If it be asked why these two arguments did not settle the question in the railway conference, there is no easy answer except that the railway men who urged the higher rates proposed to bind every competing railway by a promise to maintain them. That is to say, an indefensible and uneconomic action was to be carried out, in the face of public protest, through the power of virtual monopoly. And President Roosevelt, of all men on earth, is quoted as approving the undertaking.

The theory that last week's violent break in stocks was a response to failure of the currency-tinkering plans at Washington would be more convincing if somebody beside the financial experts of the Senate had discovered the connection. Financial opinion in Wall Street, including even the bulletins of commission brokers to their customers, shows a provoking tendency to ascribe the 5 to 8 point fall in speculative shares to the fact that a group of speculators had recklessly bid up prices, in the four preceding weeks, and that, when these speculators tried to secure profits at the high level thus established, they found nobody to buy. "This condition," one Stock Exchange house writes to its constituency, "was one of the chief causes of the panic of last autumn"—nothing about the currency, even in this retrospect.

If the newspaper dispatches have covered the important issues in the suit against the New York, New Haven and Hartford Railroad, under the Anti-Trust Law, we are bound to confess that the action, on its face, is less justified than any other of the suits against corporations brought by the government. The New Haven is called to account for its acquisition of Boston and Maine Railroad stock, and for its purchase of trolley lines. In the first place, both these movements are subject to the control of the States, and both have been under the consideration of the State Legislatures. They are, we should say, matters for State rather than Federal regulation; because, while a merger with the Boston and Maine would naturally fall within the scope of interstate traffic, that line is not primarily a competitor of the New Haven, but in essence a connecting line. In so far as this is the case, the Massachusetts railway law, which can deal with other aspects of the matter than restraint of trade, is the proper statute to invoke. The case of control of trolley lines seems to us not dissimilar, for nothing would apparently be easier than to dismember the street railway corporations, so that none of them should of itself engage in interstate business. The wisdom or unwisdom, from a financial point of view, of the New Haven's engaging in its recent purchases of such securities, at prices declared by experts to be abnormally inflated, is indubitably a serious question by itself, but we do not see how this can fall within the scope of the Federal law.

It is more than appropriate that the first day's session of the Lake Mohonk Conference should have been concerned chiefly with the affairs of the Spanish-American republics. Peace, like charity, should begin at home, and there is no better way of answering the doubts or jeers of those who know that war is inevitable, than by emphasizing the progress that has been made towards peace in that traditional laboratory of domestic and international strife, Central and South America. It is easy to dwell on the broad discrepancy between the lofty aim that animates the calling of a Hague Conference or the establishment of a Central American peace tribunal and the actual achievement. It is perhaps legitimate for the professional humorist to point out that at the very moment when the corner-stone of a Pan-American temple of peace was being laid at Washington, there should be something like a minor reign of terror in Guatemala, the possibility of foreign complications in Venezuela, snarling discontent between Panama and Colombia, and attempts at revolution in Peru. But it is the dramatic nature of episodes of violence that draws public attention, while the forces that make for peace do their work in silence. On every hand there are signs that the ideal of order is finding its way into our tropics. In a closer approach to our own government and Mexico as their natural tutors in the lesson of independence with peace, in the advance of industrial development and railway building, and of education, the elements of a stable society are being created.

Ray Stannard Baker and other writers on the economic situation of the negro have laid stress upon the increased tension between the races in the agricultural districts of the South. This they have attributed in part to the wandering of the negro to the cities and to the North, and the lack of steady black labor. There is another reason for the scarcity of good field laborers. In certain parts of the South, the negro is going into other than agricultural employment, with great success. Thus, in the Birmingham, Alabama, coal and iron-ore district negroes are to-day mining between 80 and 90 per cent. of the ore, and about 50 per cent. of the coal. On Red Mountain, where 75 to 80 per cent. of the miners are negroes, the general manager of the ore mines reports that they are "doing very efficient work." The chief mine inspector of the State reports that, from his personal observation, he thinks that more than half of the laborers in the coal mines are negroes. When the mines were opened in the Red Mountain district, foreign white miners were employed, with negroes as helpers. Gradually the negro became the miner, and now will soon monopolize the mining industry. This great change has come about in twenty years. Mining iron ore is much more difficult and trying than handling coal, but the negroes have stuck to the heavier task. This is another illustration of the way in which the negro is advancing industrially.

President Fallières, being a man of peasant origin and robust physique, probably entered with no excessive alarm on the four days' festivities which began with his arrival in England on Monday. There is in the entire world of formalism nothing so rigidly oppressive, perhaps, as the programme of a European state visit, from the moment when the first salute is fired by two lines of as many warships as the host can muster, to the last lifting of the glass in honor of, etc., and the distribution of ribbons and orders. In the latest Parisian stage success, "Le Roi," the authors represent a visiting monarch at the French capital as returning from just such a gala performance at the opera as President Fallières and Edward VII. attended on Wednesday. "Your Majesty was amused?" some one asks. "Oh, delighted." "But your Majesty did not applaud." "Well, I was afraid of waking the President of the Republic." Moreover, not so very long ago, these royal and Presidential visits used to be regarded as rather empty parades. The political cartoonist was fond of depicting monarchs in each other's arms, with a dagger or a gun conspicuously in sight. But since M. Loubet's visit to Russia some ten years ago or more, and the memorable announcement of the Franco-Russian *entente* as a fact, and not merely a suspicion, European state visits have been either the forerunners or conclusions of significant political events. The understanding between Great Britain and France is now too old a matter for the present visit to assume any other character than that of an expression of continued friendship. That there should also be a Franco-British exposition at London and the chance of drumming up trade, naturally helps.

A foreign observer who should base an estimate of English character on the outcome of a series of Parliamentary bye-elections, might describe the Englishman as the most emotional and volatile of men. Not even the French, with a record of two empires, two royal dynasties, and three republics in a century, could be capable of such sudden changes in public opinion as the United Kingdom has apparently witnessed since the beginning of 1906. The British elector, having swept into power a Liberal government with an anti-Conservative majority of nearly 350, almost immediately turned about-face and began to plump regularly for the Unionists. The same British elector, having fashioned, almost out of the whole cloth, a Labor party with fifty-four representatives in Parliament, most of them tinged with Socialism, fell, within a short time, into a panic over Socialism. It may simplify the problem to say that the apparent reaction against Liberalism and Socialism is in reality only a reaction against the latter. The common explanation is that the party of Gladstone and Campbell-Bannerman has suffered because it was friendly to the radical programme of the new third party. This view is supported by many facts; but the interesting question remains whether, now that the Liberal party and the Labor party have openly professed hostility, the country will keep on voting for Conservative candidates at bye-elections. Winston Churchill's campaign at Dundee, and last week's election of a successor to Sir Henry Campbell-Bannerman by an increased Liberal majority, indicate, perhaps, the turning of the tide.

If Lewis Carroll were alive, he would probably take pleasure in writing a book on Morocco. Things go by opposites in the land of two Sultans, three capitals, and one God with Mohammed as his prophet. In other countries, when a monarch is driven from his capital, his cause is supposed to be on the decline, and when he marches back on his capital with an armed force his fortunes are supposed to be improving. In other countries, when a Pretender is defeated, the throne is strengthened, and when a Pretender runs away the lawful ruler comes into his own. Not so in Morocco. There, a few months ago, the inhabitants took advantage of the departure of the Sultan, Abd-el-Aziz, from Fez, to proclaim his brother, Mulai Hafid, ruler in his place. Abd-el-Aziz held quiet court at Rabat on the coast, allowed his brother a clear road—and the cause of Abd-el-Aziz prospered. Mulai Hafid, on the other hand, succeeded in putting several small armies in the field, won several small victories over his brother's forces, and finally ran away. Thereupon Abd-el-Aziz set out triumphantly for Fez. He is on the way still, but his army is now reported to be ready to go over to Mulai Hafid, for the sole reason, apparently, that the latter ran away. We have also in Morocco the French policy of pacific penetration by means of rapid-fire guns, based upon an amicable understanding between France and Spain, whose soldiers have come to blows. And, finally, there is Germany, who watches France jealously, because German trade in Morocco has doubled since the beginning of French activity; and who, in her desire to make the French task easier and to prevent European complications, rings the bell and shouts "Fire!" whenever France makes a decisive move.

The income tax bill, passed by the French Chamber of Deputies this week, has been warmly debated for nearly two years, after having been under consideration for a long time before. It is one of the measures to which the Clemenceau Ministry came in pledged, in October, 1906; and because of it M. Poincaré was replaced as Minister of Finance by M. Caillaux, the present Minister, whose financial policy is much more radical. On the part of the moderate and conservative press, the bill has been stubbornly fought. It was prophesied that French capital, described as already overburdened, would desert the country, and that the load of taxation would thus fall with increased weight on the shoulders of the poor. In a lighter vein, the Opposition press has assailed the inquisitorial methods prescribed for ascertaining a taxpayer's income. Aged ladies have been represented as having the soles of their feet burned with hot irons by revenue agents, and babies as bribed with candy-sticks to point out where their papas kept the money hidden. Should the bill become law—and, in spite of possible amendments in the Senate, its enactment now appears to be assured—it would mean an important readjustment of the entire French fiscal system. A large portion of the direct taxes, which constitute about one-sixth of the national income, will be suppressed; notable among these is the door-and-window tax.

Pius X.'s unwavering conservatism is attested once more by his veto of the scheme to organize the French priesthood into mutual aid societies, under the law of devolution of Church property enacted in November, 1907. High hopes had been entertained that these mutual aid associations might become a means of reconciling the Church and the government, or at least of mitigating distress among the priesthood. While last year's bill was under consideration, the proposal was made by the Abbé Lemire, the Christian-Democrat Deputy, that certain pension funds for old priests should be handed over to the proposed mutual aid societies. The government not only accepted the amendment, but provided for the additional transfer to such societies of property left to defray the cost of masses for the dead. The pension funds which the societies would have received under the law amounted to some twenty million francs. The funds left for masses were still larger. All the Deputies and Senators of the Catholic Right voted for the bill, and for a long time it was believed that the Pope would sanction the establishment of the associations. But, apparently, the argument of the extremists at the Vatican, that these societies would constitute a menace to episcopal authority by injecting an element of democratic self-government into the church, has prevailed.

In no country has Socialism made as marked progress among the agricultural classes as in Italy, where its latest weapon is the strike of farm laborers. Within the last three weeks Parma, in the north of the peninsula, has been the scene of such a strike, engineered largely by the socialist leaders, but finding its strength in the generally just demands of the strikers. The amount of violence, considering the bitterness of the struggle, has been inconsiderable, showing that the labor organizers have succeeded unusually well in enforcing discipline. Italy, like other European countries, is now feeling the pressure of competition in the labor market, following the return of tens of thousands of emigrants from the United States; and especially in the north the agricultural laborers are sufficiently well organized to fight with a chance of success. One feature of the strike at Parma stands out in curious contrast with recent land agitation in Ireland. There, cattle-driving was one of the offences that led the Irish Unionists to clamor for repressive measures. The Italian strikers, however, attempted to keep the cattle from being shipped out of the district affected by the strike, so that the animals might perish for lack of pasture and fodder. Nevertheless, the landowners succeeded in exporting their cattle, though at a heavy loss.

RESPONSIBILITY FOR EXTRAVAGANCE.

Republican leaders in the House are visibly worried over the vast total of appropriations. The sum will be considerably above $1,000,000,000—and this with the Treasury running behind about $400,000 a day. Feeling that somebody will be blamed for this, the men at the head of the House organization are looking around to find shoulders more willing than their own to assume the burden. Congressman Tawney has elaborated the ingenious theory that the Democratic minority is responsible for at least $50,000,000 of the waste. He argues that but for the filibuster the majority could have prevented this expenditure. But this roiling of the water upstream does not appear to Congressman Burton to be an adequate explanation. In his speech in the House on Monday he pointed to the Senate as the guilty party. Referring to the undoubted fact that most of the appropriation bills come back from the Senate with heavy additions, he affirmed that the real cause of extravagance lay in the existence of "another House with different ideas, and more readily reached by those who represent local or special interests." Mr. Burton's remedy is to refuse to "yield the prerogatives of the House to the Senate."

Even theoretically, this is not convincing. Money bills can originate only in the House, yet the Senate has the Constitutional right to amend them, and amending may mean, usually does mean, increasing. But we do not see that any "prerogative" of the House can successfully be asserted against this. The brute power of the House might be asserted. It could, if it chose, take an immovable stand on the issue of economy, refuse assent to every Senate amendment, and compel an extra session, if necessary, with an appeal to the country to sustain its position. But everybody knows that the House will not do this. And everybody should know the reason why. Practically, the individual members of the House are often interested in the swollen appropriations urged by the Senate. Representatives have fought for them in vain before the House committees, and then have gone quietly to their Senators to get the desired sums inserted in the bills in the Senate. When these bills are returned to the House, they thus have numerous and powerful friends on the floor, no matter what the attitude of the leaders may be. Hence the spectacle, which we have seen again and again this session, of the Chairman of the Committee on Appropriations solemnly warning the House and his party against squandering the public funds, yet voted down by his own followers in a log-rolling league with Democrats.

There could not be a clearer or more melancholy illustration of the haphazard way in which our national budgets are framed. One committee looks after raising the revenue, a dozen others, unrelated and intriguing against each other, have the spending of it. It is only a happy accident if income and outgo have any relation to each other. We have no responsible Finance Minister, or even a party organization in charge, to put the foot down firmly and say: "You can't have this money, because the state of the Treasury does not admit of it." All is left, under our system, to pulling and hauling and giving and taking—or giving and grabbing.

This lack of financial control is the chief reason why Congress is extravagant. In respect to the national finances, we have no really responsible government. And without it, one should always remember, the instinct of a popular assembly is to be wasteful of the public money. The House of Commons began as an economical body, checking the expenditure of the King; but when it became itself the real executive, it fell to spending more than any King or Minister ever dreamed of. Hence the government had finally to step in and take charge of all money-bills; for, as Walter Bagehot laid down the general principle of action by the House, when left to itself: "If you want to raise a certain cheer in the House of Commons, make a general panegyric on economy; if you want to invite a sure defeat, propose a particular saving." That rule holds good of Congress.

There is, however, a superadded reason why the appropriations of Congress, seen against the black background of shrunken revenues, appear glaringly extravagant. The party in power is traditonally lavish in its policies; and its President is a man into whose ken economy never swims. Mr. Roosevelt has not uttered a single earnest word in favor of retrenchment; his demand is always for more money expended on new projects. The orator at the Columbia Law School on Monday maintained that a study of the law would have been of the greatest advantage to the President. We ourselves think that a business training and serious effort to grasp financial principles would have been more profitable to both him and the country. In President Cleveland's second inaugural, he upheld the homely American virtues of frugality and thrift, and, although the clouds were but beginning to gather upon the financial horizon, called for the utmost economy in public expenditures. But not even in these bad times—which good Republicans do not mention as they pass—have we had from the President anything so weighty or direct. With his constant attitude being that of "hang the expense," it is not strange Congress has hanged it.

FREE TRADE AND THE MERCHANT MARINE.

The National Association of Manufacturers, in session in this city last week, went bodily over to the view that the only way to build up a great merchant marine is by putting the government into partnership with the ship-owners. This was not a surprising decision, for these manufacturers are themselves in partnership with the Federal Administration through the tariffs under which they prosper, always at the expense of those who do not belong to the privileged class. The manufacturers wish to see liberal subsidies paid, both in the form of bounties and of mail subventions; and they telegraphed to Washington their earnest desire for the prompt enactment of the post office appropriation bill, with its ship-subsidy amendment, then pending. Fortunately, that measure has since been defeated.

Fortunately, we say, for we have more than once pointed out that subsidies too frequently mean the establishment of lines which are not justified by genuine economic demand, but only by the purely sentimenal desire to display the flag. Were the Manufacturers' Association to investigate a little more thoroughly the subject of subsidies, it would find that the two greatest merchant fleets, those of Great Britain and Germany, have been created in other ways than by Treasury grants. That assistance has been extended to certain passenger ships for naval reserve or mail-carrying purposes is true; but this kind of subvention would in no way account for the enormous growth of the two fleets under consideration. That of Great Britain and her dependencies increased from 7,149-134 tons in 1870 to 12,791,381 in 1906. In every decade during that period the growth was steady and normal—in the neighborhood of a million and a quarter tons—and no section of the British marine prospered so well as the "tramp" portion, which receives retainers neither as naval reserves nor mail carriers. The fleet has grown primarily because, thanks to free trade, England does a great business with all parts of the globe, and not having to pay artificial prices for the materials used in shipbuilding, can construct ships more cheaply than any other country.

As for Germany, had the committee of the Manufacturers' Association read a recent article by A. W. Bloem in the Berlin *Tageblatt*, they might have revised their opinion as to the real reason for the splendid increase in that country's sailing and steam vessels. It has repeatedly been said, for instance, that German ships are favored by especially low railway rates and by subsidies. As Mr. Bloem points out, it is actually cheaper for the great industrial section of western Germany to ship goods out of the country by way of the Dutch and

Belgian harbors than to send them to Bremen or Hamburg; and of this fact the manufacturers of that region are taking full advantage. So far as subsidies are concerned, Mr. Bloem notes that they are of comparatively slight importance—the greatest German steamship company, the Hamburg-American, has never received a cent of subsidy. Mr. Bloem also asserts that the benefits of some of the subsidies now conferred are open to grave question. Thus, the annual report of the German East African Line shows once more very plainly that it suffers grievously from its government contracts and subsidies, and would be better off without them.

As for the United States, Mr. Bloem has something to say which is well worth the manufacturers' attention:

> A pitiful picture is afforded by the United States merchant marine, whose ocean-going tonnage receded from 2,700,000 tons in 1870 to 882,000 in 1902. . . . All efforts up to this time to bring about a change must be regarded as total failures. Tariff politics and tariff legislation kill all desire to develop the merchant fleet. On the one hand, the enormous tariffs prevent any competition by increasing greatly the cost of construction; on the other, the laws forbid the purchase for American register of foreign-built vessels. Whence shall any new ships come?

Certainly, the answer of a reasoning man cannot be: by means of subventions and bounties.

So far as England is concerned, the new Chamberlain school is bent on showing that, while the fleet developed wonderfully under free trade, the time has now come for aiding it by preferential tariffs, retaliatory measures, more subsidies, and perhaps even navigation laws. The protectionists aver that there is a slackening in the development of the fleet, and that some of England's rivals, notably Germany, are increasing at a more rapid rate. But the growth of the German marine is not due to artificial stimulation, but to other causes. The United States, with its wonderful seacoast and natural resources, lags far behind, not because its government is stingy of its funds, but because it is so stupid as to refuse to remove obvious obstacles from the path of our shipbuilders and owners. If Congress really desires to do something for American shipping, the method is simple and easy: abolish the tariff on all materials that enter into the construction of vessels; allow Americans every opportunity to build ships at a low price, and allow them, also, to buy ships wherever in the world they can be built most cheaply. In fine, conform to those economic laws which make it profitable for Englishmen and Germans to construct and operate ships.

THE MYSTERY OF CRUELTY.

The interest awakened by the case of Belle Gunness, the Indiana woman who lured so many victims to death, is not surprising. To many minds such a combination of mystery and horror is irresistible in its attraction. Nor is this attraction confined to persons who have little or no intellectual resource beyond the crude sensationalism of the newspapers. Edward FitzGerald tells us in one of his letters that his "chief Article is Murderers," and he is "having a Newgate Calendar from London." One of the most distinguished scholars in New England, in answer to the question why he studied all the evidence in the Borden murder trial, urged that Shakespeare's tragedies and, indeed, the great tragedies of all literature, are chiefly murder stories. Undeniably, there is a fascination in untangling the complex of motives which have actuated famous criminals. The Gunness woman seems to have been largely influenced by greed; but greed could not have been all of it. She must have had something of that gusto in killing which De Quincey discusses in his "Murder Considered as One of the Fine Arts." Such outbreaks of cruelty, such displays of positive pleasure in another's pain, and of an insatiate lust blood, are often reported in the press. Only a few months ago the English newspapers were filled with stories of a Mrs. Rushworth, who, for sheer love of brutality, used to beat a little girl, to deprive her of proper clothes, bedding, and food, and even to burn her with hot irons; and the dispatches from Paris have just been telling us of a Jeanne Weber who strangled seven, and perhaps nine, children. These survivals of savage passion serve to remind us how thin is the veneer of our civilization, how easy it is to drop back to the moral level of the ape and tiger.

Now, as in the Psalmist's time, the dark places of the earth are full of the habitations of cruelty. History records no atrocities which cannot still be matched, say, in darkest Africa, where the instincts developed by the long and fierce struggle for existence are still untamed. Spots yet exist where man as well as nature is red in tooth and claw. What we forget is the short distance of time and space that separates us from our ferocious forefathers. Dr. Johnson, in his "Journey to the Western Islands," relates the tradition that the Macdonalds—honored name to-day!—surrounded the Culloden church on Sunday, fastened the doors, and burnt the congregation alive. The entertainment received its perfecting touch when the Macdonald piper mocked the shrieks of the perishing crowd with the notes of his bagpipe. The massacre of Glencoe occurred as late as 1692; and a chief conspirator was the Master of Stair, whom Macaulay describes as "one of the first men of his time, a jurist, a statesman, a fine scholar, an eloquent orator. His polished manners and lively conversation were the delight of aristocratical societies." Within the memory of men not yet old the hanging of criminals was the most popular of public spectacles in England and America. This wholesale glutting of cruel appetites more than once furnished a subject for the pen of Dickens. And what are prize-fights but an opportunity to slake one's craving for blood? No one who has read Hazlitt's essay, "The Fight," can forget one harrowing description:

> I never saw anything more terrific than his aspect just before he fell. All traces of life, of natural expression, were gone from him. His face was like a human skull, a death's head, spouting blood. The eyes were filled with blood, the nose streamed with blood, the mouth gaped blood. He was not like an actual man, but like a preternatural, spectral appearance, or like one of the figures in Dante's "Inferno."

From this picture Hazlitt passed on to "the brilliant sun on the tawny meads or moss-colored cottages" and to digressions on "some topic of general and elegant literature." The friend with whom he attended the exhibition was deep in a volume of "The New Eloise." And Hazlitt pertinently asks the ladies whether, after this, they will contend that a fondness for prizefighting "is incompatible with the cultivation of sentiment."

Perhaps an even more striking illustration of the survival of savagery may be found in men's religious beliefs—say, in the conception of a god who is a cruel man endowed with omnipotence. Grave divines were telling us within a generation that a just and merciful Father, for his good pleasure, had doomed certain of the non-elect to the most hideous physical tortures for all eternity. It was in 1879, less than thirty years ago, that Herbert Spencer, in "The Data of Ethics," stated the theory quite nakedly:

> Derived from bloodthirsty ancestors, such gods are naturally conceived as gratified by the infliction of pain; when living they delighted in torturing other beings; and witnessing torture is supposed still to give them delight. The implied conceptions long survive.

Some of our readers may recall the attacks upon Spencer for this and similar utterances, and even upon clergymen otherwise orthodox, like the late Frederic William Farrar, who ventured to doubt the doctrine of eternal torture.

But the years are bringing to each of us a clearer recognition of the fact that the man we meet in the street is as human and alive as we; that if you prick a Jew he bleeds, and if you poison him he dies; that He who made us made also the beast of the field and the bird of the air; and that He beholds our cruelty and hears their cry. Even in civilized countries, however, most children pass through the stage of savagery—"as cruel as a schoolboy ere he grows to pity." And, though cruelty disappears before the sensitiveness of a cultivated imagination which enables us to comprehend the feelings of others, men quickly relapse into brutality. As Lecky reminds us, Europeans in their dealings with an inferior race are likely to display "complete and absolute callousness"—like the Belgians in the Congo. Asylum and prison attendants, with no one to check them, revert into cave-men. Often, too, some fit of anger, some mental or physical disturbance, a drug or a drink which paralyzes the will and slips the leash from the passions, will suddenly transform a restrained and gentle woman into a fury. Every one can probably remember some terrible moment when the blind, biting rage of the gorilla has flamed up in his heart. The memory of those crises when the wild man within us has almost broken the chains of custom and discipline, lends a fearful interest to the careers of a Mrs. Gunness or a Mrs. Rushworth, and makes us echo Wesley's sigh of relief, "But for the grace of God, there am I."

FRANÇOIS COPPÉE.

The death of François-Édouard-Joachim Coppée of the French Academy was announced in a dispatch from Paris on Saturday. Born in Paris, in 1842, he received his early education in the Lycée St. Louis, and then secured an appointment in the French War Department. But his inclination lay toward the literary life; and he had scarcely emerged from boyhood when he published his first efforts in romantic verse, which, imitative as they naturally were, yet revealed unmistakable signs of poetic genius. He was one of the most distinguished of the band of "Parnassians," who published a volume of poems in 1866. Soon afterwards he printed a collection of his own verse, called "Le Reliquaire," and a little later a second book, "Poèmes modernes," of which two pieces, "La Bénédiction" and "La Grève des forgerons" were recited all over France, and attained great popularity.

But nothing contributed more to establish his literary fame than the tender little play, "Le Passant," which was produced in 1869 at the Odéon, and was rewarded with prompt critical and public appreciation. It has provided Sarah Bernhardt with the inspiration for one of her most artistic achievements. His "Fais ce que dois," a dramatic episode in one act, charged with lofty, patriotic spirit, and written in fine, heroic verse, was received at the Odéon, in 1871, with acclamation, and created similar enthusiasm throughout France, which still was quivering in the bitterness of defeat. A second piece, conceived along the same lines, and with similar patriotic intent, "Les Bijoux de la délivrance," had an almost equally fervent reception. Other plays that belong to this early period are "Deux douleurs," "L'Abandonnée," "Le Luthier de Crémone," and "Le Petit marquis." Among later plays may be mentioned "La Guerre de cent ans," written in collaboration with D'Artois; "Le Trésor," a one-act comedy; "Madame de Maintenon," an ambitious drama in five acts and in verse; "Severo Torelli"; "Les Jacobites"; and "Le Pater," which dealt with the Commune. His greatest triumph, however, was won in 1895, by his fine romantic drama, "Pour la couronne," which was compared by several of the most eminent French critics to some of the great masterpieces of ancient classic literature. The subject, dealing with supposed incidents in the struggle of the Bulgarians against the Turks, was one which appealed with special force to French susceptibilities, and the play had a most prosperous run. A translation of it by John Davidson was successfully presented in London, with Forbes Robertson and Mrs. Patrick Campbell in the leading parts. In this country the piece was put upon the stage, in admirable fashion, by Edward Vroom, but failed to meet with appreciation.

Several collections of his poems, published during his prime, were crowned by the Academy. We may name "Les Humbles," dealing with the virtues of the poor; "L'Exilée," "Les Mois," "La Marchande de journaux," and "Arrières saisons." All of them bore the distinguishing marks of his fine workmanship, ardent patriotism, and delicate fancy. He was also the author of several novels and of more than one collection of short tales, all of which found eager readers. Some of the better known titles of his works are "Toute une jeunesse," "Une Idylle pendant le siège," and "La Bonne souffrance."

For a number of years Coppée was librarian to the French Senate, and was then appointed keeper of the archives of the Comédie Française. This post he resigned in 1884, on being elected a member of the Academy. Four years later he was promoted to be an officer of the Legion of Honor. During all these years he continued to live on the Rive Gauche, a figure beloved of the students who would address him as *Cher Maître*. After his first connection with the Parnassians he remained somewhat apart from the changing schools of Paris. For symbolism he had only an amused toleration.

The death of Coppée is the fourteenth in the ranks of the French Immortals within less than five years. Fourteen out of forty is a high ratio, even considering that men who enter the Academy are no longer young; it is the best-known names that are bound to disappear first. Any country would feel itself the poorer if within a short five years it had to suffer the loss of such men as Brunetière, Sully-Prudhomme, Heredia, Theuriet, Berthelot, Ludovic Halévy, and François Coppée. Of these seven all but one have died in a little over a year.

NEWS FOR BIBLIOPHILES.

Worthington C. Ford, in his letter in the *Nation* of May 21, telling of a manuscript of Franklin's Autobiography lately acquired by the Library of Congress, closes by saying that it "deserves to rank second among the manuscript copies of the Autobiography, the first being that in Franklin's own writing." This original, in Franklin's own autograph, is now owned by a private collector in Brooklyn. It was composed at four different periods, and at different places; and it consists of 119 leaves, folio, varying slightly in size, containing 234 pages. Franklin took his folio leaf and creased it by folding it down the middle. The narrative was written on one-half of the page, the other half being reserved for additions and corrections. Frequent use was made of this wide margin. The first section was written in 1771 at Twyford, at the Bishop of St. Asaph's, and is paged, by Franklin himself, from 1 to 87. Page 71, smeared with ink, which was probably spilled upon it accidentally, was rewritten by Franklin, the lines on this sheet extending entirely across the page. The second portion was written at Passy in 1784, and is paged 88-104. The third and larger portion was written after Franklin's return to America. It begins, "I am now about to write at home, Aug't, 1788,—but cannot have the help expected from my Papers, many of them being lost in the War." It is paged 104 to 213, but pages 191 to 200 are repeated in the numbering. This portion brings the history of his life down to July 27, 1757, and is the end of the Autobiography as printed by Franklin's grandson, William Temple Franklin. The later portion, pages 213 to 220, which was first published by John Bigelow in 1868, from this manuscript, was written during the last year of Franklin's life in the intervals of suffering from disease. Preceding the Autobiography are two leaves added later in another handwriting. Page 1 is a title, "The life of Benjamin Franklin, an autographical [*sic*] manuscript." Pages 2 and 3 contain a memorandum, in French and English, on opposite pages, giving the history of the manuscript. The English rendering (written evidently by a Frenchman) is, in full, as follows:

> The life of Benjamin Franklin, written by himself. The only manuscript entirely of his handwriting. Dr. Franklin, when ambassador in France, was very intimate with Mr. Le Veillard, gentilhomme ordinaire du Roi, his neighbour in Passy near Paris. He presented his friend with a fine copy of the memories of his own life. When William Temple Franklin, Dr. Franklin's grand-son, came to Europa, in order to publish the Works of his illustrious grandfather, he required from Mrs. Le Veillard (Mr. Le Veillard had perished on the revolutionary scaffold) the correct and fine copy given by his grand-father, as more convenient for the printer. "If I give it to you, I shall have nothing more of our friend." "I will give you, in place of the copy, the original manuscript of my grandfather." In this manner the original and only manuscript, came by inheritance into the hands of Mr. de Senarmont, Mr. le Veillard's grand-nephew.

The translation by Le Veillard described by Mr. Ford, must have been made from "the correct and fine copy," which Franklin gave him, and which probably lacked the fourth portion.

The Greek manuscript of the Gospels, written on 304 leaves of vellum, and ascribed to the twelfth century, which was sold with the Edward H. Lowe Library by the Anderson Auction Company in this city on May 21, brought $1,175. At the same sale a copy of Hawthorne's first book, "Fanshawe, a Tale," 1828, in the original boards, cloth back, paper label, brought $510. A first edition of Mrs. Eddy's "Science and Health" was bid up to $114.

Correspondence.

PROPER WORK OF A GRADUATE SCHOOL.

To the Editor of The Nation:

SIR: No one is likely to see more clearly than the teacher of graduate students how much of truth there is in your editorial of May 14 on a "School of Authorship," and in the editorials of like kind which are not infrequent in the *Nation*. Because I sympathize with so much that you say, I am moved to ask if you are taking quite all the case into account. As I understand it, the object of a graduate school is not culture; it is scholarship. It is as much a professional school as a law school. Its avowed object is to train the investigator, and the teacher of the higher grades, not of the lower, and only incidentally of the intermediate.

Is the criticism of a graduate school that its studies do not conduce to culture, or to authorship of the artistic literary kind, more in place than it would be of a medical school? Has not the student who seeks these things from graduate study been badly advised? Were they the chief product of such a school, would it seem to be doing the work intended of it as a department of the university and would it not stand in need of reform? Is it not essential to the advance of civilization that the scholarship of the world be maintained and the sum of things known be increased? It must be admitted, however, that no professional school has yet learned how to prevent the occasional graduation of a quack, nor any faculty how to avoid the occasional appointment of an ass to be a professor.

Again, a graduate school, whose business is training in scholarship, must have something definite to teach which can be taught. Now I think it is very generally the belief of practical teachers that, after the more elementary ranges of instruction are passed, it is not possible directly, or even with any real success indirectly, to teach culture or literary authorship. I think it is the general experience of universities in all lands, and in all subjects of study that when these things are made the chief objects sought, except by the very unusual teacher who is as much the gift of the gods as the maker of true literature, and as rare, the result is a fatty degeneration. The respect of the student himself is lost and the work fails to accomplish the purpose sought, or any worth while. The place to try for such ends is in the undergraduate department, but even there if they are too directly sought, the result is apt to be the same, and the course of study of the unfortunate instructor becomes known in the student dialect as a "soft," or "snap" course, or by some less euphonious term. My own opinion is, however, clear that in the college the risk of such a deplorable classification ought to be run, with due vigilance on the part of the instructor to avoid it, until he finds it cannot be avoided. In respect to the graduate school the attempt seems to me at present out of place.

You write chiefly of the departments of English and history, and in this respect they have many points in common. History is, however, the best case because almost every one seems to feel that high literary accomplishment in that field is attainable by labor and pains, and that such a result is the primary purpose of historical writing. I am quite ready to admit that this will be a legitimate purpose of the ultimate and final history, and that the story of the human race is likely to be the grandest theme of all time. In order, however, that such a work should be written, and that it should be at the same time history, it is first necessary that the facts should be known in so far as they can be established by careful investigation. It is necessary to be able to distinguish what we can know from what we cannot. If the purpose is literature only, merely to entertain, or to point a moral, or to write a drama, it is not necessary to know more than the surface appearance of the facts, and apparently much history has been written in that way. Some of it may very likely retain its place in literature.

We still read Carlyle for his vivid picture of a nation in the white heat of passion, but I doubt if any one would think of going to him for the history of the French revolution, as history. Michelet is, perhaps, a better example, for it is doubtful if any historical work was ever received, or ever will be, with so universal an outburst of applause from contemporaries, as his. Michelet is still read, and he deserves to be long read, for the potent stimulus which his eloquent pages furnish to historic interest and insight, but no one would dream of quoting him as an authority upon any uncertain fact of history. Gibbon is, so far as I now recall, the only example from a past distant enough to give us the right to judge, whose work retains something like its original position, both as literature and history, but this is not due to its literary quality. It is due to the fact that in him occurred the combination almost unique as yet, of a literary gift and a scientific command of the material, so far as science and material were possible to his age. Without this his work would have survived, if it survived at all, merely as literature.

I am afraid that the man who is ambitious to write a great literary work in history, for a long time to come, will either have to submit himself to a severe training in historical criticism, preferably in some good graduate school, which he can do without quenching the spark of genius, if he has it in him, or be content at no distant day to have his fame rest upon the literary side of his work alone as truly as if he had written a formal drama. For most of us ambition must be more modest. Very few can hope to realize a dream of literary achievement. Any industrious student of good intellect can hope to aid in bringing on the time when the drama of human history can be truly written. To enable him to do this, and while doing it to hand on to others what past laborers have found out of how best to do it, is the object of the graduate school. That the purpose to which you would call us is, in the ultimate balance of things, a higher one, at least in English and history, I think we should all admit. We are, indeed, conscious enough of this to make it of little use to reiterate the fact. If it can be shown that there is some practicable method of accomplishing such a purpose, of really accomplishing it, while supplying the world's need of scholars, I am sure we shall all be grateful. GEORGE B. ADAMS.

New Haven, May 21.

Professor Adams's criticism is directed rather toward the letter of Dr. Stuart P. Sherman, in our issue of May 14, than toward our editorial comment. Dr. Sherman complained that graduate school instruction stifles literary taste and aspiration:

> Original literary power is the very thing that the graduate school should nourish. This, however, is the thing that the graduate school ignores, mocks, seeks to discourage.

Our comment was that the primary aim of the graduate school is not to produce authors, but teachers. It encourages specialization, not wide intellectual ranging. "The man who goes to a graduate school in order to become an author is patronizing the wrong shop." And we reached a conclusion not far from that of Professor Adams:

> We can hardly ask the ordinary graduate school to abandon its present work and change the whole direction of its energies for the sake of our intending essayists, novelists, and poets.

—[ED. NATION.

GRADUATE INSTRUCTION IN ENGLISH.

To the Editor of The Nation:

SIR: You published in your issue of May 14 a letter from a correspondent, in which he frames an indictment against the graduate instruction in English literature given in our Eastern universities; and in your editorial comment you seem to accept the validity of the accusation.

Your correspondent declares that the young graduates of Western colleges, gifted with a keen sense of literary excellence, go hopefully to the graduate schools of the East expecting to advance steadily to higher levels and broader prospects. He asserts that they then meet with sad disappointment, since "they are bidden to provide themselves with an adding machine to count the occurrence of 'flesh' and 'fish' in the poetry of the fourteenth and fifteenth centuries; they are asked to hearken to the vowels and consonants singing together through the Dark Ages," and "they are set astride an enchanted broomstick and sent chasing Cuchulinn through the Celtic moonlight."

This is a grotesque picture, but it is the result of looking at the actual facts with the spectacles of prejudice. The graduate schools in the East to which Western students are most likely to go to study English literature are Harvard and Yale, Columbia and Johns Hopkins. If your correspondent had taken the precaution of glancing over a list of the recent dissertations of these four universities, I think he would not have ventured to write his letter. I doubt if he would have found any support for his contention in the subjects treated at Harvard, at Yale, and at Johns Hopkins; and I know he would have found none in those treated at Columbia. Our dissertations must be published; and here is the latest list issued by the Columbia University Press: "Scott as a Literary Critic," "Outlines of the Literary History of Colonial Pennsylvania," "The Early American Novel," "The Oriental Tale in England in the Eighteenth Century," "A Study of

Shelley's 'Cenci,'" and "Studies in New England Transcendentalism." No one of the students dealing with these subjects has been "set to burrow in a gopher-hole," and no one of them has had to provide himself either with an adding-machine or an enchanted broomstick.

I note another statement of your correspondent, which is quite as fantastic and remote from the fact as that I have already commented upon. He sees fit to assert that "the very best men do not enter upon graduate study at all; the next best drop out after a year's experiment; the most unfit survive and become doctors of philosophy." As I read this, I recalled almost at random a few of the men who have taken the doctorate at Columbia within the past eight or nine years: Prof. J. E. Spingarn, Prof. F. W. Chandler, Prof. John Erskine, Mr. Ferris Greenslet, men who possess, all of them, solid scholarship and the gift of expression. Highly as I have rated the majority of the graduate students with whom I have had the pleasure of working, I must confess that I have failed to rate them highly enough—if Messrs. Spingarn, Chandler, Erskine, and Greenslet are examples of "the most unfit" who survive and become doctors of philosophy. BRANDER MATTHEWS.

Columbia University, May 18.

WHAT A DARWINIAN IS NOT.

TO THE EDITOR OF THE NATION:

SIR: In a letter in the *Nation* of May 14 there are two references to "Darwinians" which appear to be flings of some description, though it is difficult to arrive at their exact connotation. It would seem that unfair and belittling references to Darwin and his methods are going to outlast the centenary of his birth and the fifth decade since the "Origin of Species." Regarding the application of pseudo-scientific methods to literature, there is probably much to be deprecated, but there is no excuse for labelling the industrious counters of b's and p's "Darwinians."

It appears at times as if the sorrowful admission of Darwin that he could no longer, in his old age, appreciate poetry, art, and music has been the only thing about that great and good man that has taken hold upon the minds of the champions of culture. And so, when it is desirable to call up the concept of one dulled by scientific research to the niceties of life, the thing to do is to refer to a "Darwinian." Let Goethe adumbrate the evolutionary theory, and it is poetic insight or what-not; but let Darwin grasp the idea in all its fullness, and prove it to even the "hodcarriers of science," and it is gross grubbing, or worse. Evidence is "shovelfuls of facts," the compelling appeal to the intellect is objective presentation, "embanked and barricaded with notes."

I do not mean to say that the letter to which I refer gives example of more than a conventional usage, but it affords a text notwithstanding for remarks upon what is behind the convention. For instance, people with Darwinian tendencies are here assumed to be averse to generalization and generalizers; and they "shun popularity as they do the devil." But Darwin was the grandest generalizer of the past century, as is proved by the fact that Darwinism is now built into the foundations of modern thought. Let Weismann tell how, up to Darwin's time, men stood in a maze before the infinite variety of the organic world—how naturalists described types, labelled them, and left them—until Darwin, by a sheer feat of the scientific imagination, seized the elemental principles upon which all this complexity became explicable, and made other men see them and acknowledge them. Before Darwin it was mostly "Grübeln"; thereafter the harmonies of things stood forth. Again, as to popularity: Huxley was certainly a Darwinian—one of the first two or three—but who has done more to popularize science's achievements, and their bearing upon life and its theories and philosophies, and in a style, withal, not "unrelieved by humor or feeling," and not the least literary of his age? Certainly, he was not "suspicious of felicity of expression." Nor, indeed, was Darwin. It is true that Darwin was not, as he himself said, a "clever man like Huxley"; any one who takes pains to read those letters of his which set forth the heartening sight of a strong and humble soul, readily appreciates the cost to him of being clear and happy in expression. But I do not know where in the essayists and poets one will find a more haunting impression of the reverence of man before Nature than in certain passages in the "Origin of Species"; the language-medium is used with at least sufficient skill and "felicity" to convey what the poets not seldom strive for in vain.

There is no quarrel with felicity of expression, except as it becomes an end in itself. Darwin never wrote elegant nothings concerning caviar or marmalade, it is true; but he had something great to say, and he said it so that it could not easily be improved upon in the matter of clarity, logic, feeling, and even humor. Also, he wrote or supervised the writing of no German theses; he never delved without some wide generalization in view. He deserves in no respect that an uninspired soul who insists upon "digging clams with a derrick" along the shores of English literature, should be called a "Darwinian" in reproach. There is somewhat too much of this superior attitude toward scientific method in general. It is perhaps pardonable in view of the unedifying fatuousness of certain "scientists"; but to affix the adjective "Darwinian" to concepts of this nature is to misrepresent one to whom the world owes such sum of honor as is due to the greatest.

ALBERT G. KELLER.

Yale University, May 19.

AUTHORS AND TEACHERS.

TO THE EDITOR OF THE NATION:

SIR: In an editorial of May 14 you trifle suggestively with the idea of a "graduate school of authorship," and then seem to relegate it to the limbo of ideas Utopian. Your title is a little damaging to the plea set forth in my letter of the same date. Now, as a matter of fact, I am primarily interested in the production of teachers, and not, as your editorial suggests, in the production of authors. (These rare creatures I regard as possible and fortunate by-products of a thoroughly sound school for the higher teachers.) Therefore, I particularly welcomed your definition of the proper aim of the graduate school: "to turn out teachers." My earlier faith in this obscure matter coincided with yours, but it has been much shaken—for example: by a teaching doctor of philosophy who naïvely inquired of a colleague what Dryden thought of Rousseau; by another who expressed his opinion that the successors of Shakespeare can be distinguished from the predecessors only by the dates; most of all, perhaps, by a professor of English literature, doctor of philosophy and contributor to learned journals of many articles on Anglo-Saxon syntax, who gravely informed his classes year after year that Burke was an ardent champion of the French Revolution. These things and others of like nature unsettled me so thoroughly that I was singularly surprised and delighted to hear you reaffirm my old belief. The cause of my difficulty became clear: in an instant, it flashed over me that a knowledge of Dryden, Rousseau, the Elizabethans, Burke, and the French Revolution was no necessary part of the equipment of a university teacher—otherwise, of course, the graduate schools would have insisted upon it. My illumination increased as I read on in your editorial and found that a "school of authorship would need a different organization" from anything now existing, that there would have to be extensive reading, and "hard discipline in reflection and assimilation." Such organization of study would put the young author in a fair way to become acquainted with some of the important men and facts of the modern world. To the author, then, such knowledge is indispensable; to the university teacher, it is not—clear as a conclusion in geometry!

STUART P. SHERMAN.

Urbana, Ill., May 16.

STOLEN LETTERS OF PENN AND LORD HOLLAND.

TO THE EDITOR OF THE NATION:

SIR: A Grangerized copy of Faulkner's "History of Kensington" (London) was sold by auction in Kensington on the 18th of March last, and was bought by a gentleman with a view to its being ultimately placed in the Kensington Public Library. After having been delivered to him, it was found that at least two autograph letters were missing. One was a lengthy signed letter of William Penn. This letter is of considerable value. Another letter missing was of Henry Fox, Lord Holland. As it is possible that one or both of these letters may be offered for sale in the United States, the purchasers are communicating with collectors, institutions, and well-known dealers who are likely to be approached in such matters.

They request me to say that they will be much indebted to you if you will mention this loss in your widely-read journal. They feel confident that all collectors, institutions, as well as dealers of repute, would like to aid them in recovering property missing under such circumstances. Any communications addressed to Messrs. B. F. Stevens & Brown, Trafalgar Square, London, W. C., or the Chief Librarian, Public Library, Kensington High Street, London, W., will be much appreciated.

HERBERT JONES,
Chief Librarian, Kensington Public Libraries, London, W.

London, May 11.

BITING THE BITER.

To the Editor of The Nation:

Sir: I recently wrote in your columns (January 2) on the unmoral methods of auction cataloguers of manuscripts, methods which could only be intended to mislead the buyer and increase the profits of the dealer or seller. I was amused by the published comments on my letter of a well-known dealer in autographs, who admitted the prevalence of the methods characterized, and their purpose of taking in the "ignorant rich." The latter could not be "induced to buy anything unless a great hurrah is made over it, and unless they see a chance to get some advertising out of it. They want the item to be sensational, either truly or falsely, and they want to pay a big price for it." But he would not admit that there was any real harm in such misleading catalogues, as the buyer would be perfectly happy in his purchase—as also, he should have added, would be the seller.

I am still more amused to learn from a published statement that this same dealer purchased at auction in London a Voltaire letter which was not a Voltaire manuscript at all, and he rails thus at the situation:

> No matter how falsely the item may have been catalogued; no matter how much to blame the auctioneers may be for having catalogued an item wrongly—the poor American buyer must pay for it just the same.

The obvious lesson to be drawn is that it is fun and morals to "skin" a rich American but wrong and unmoral to play the same trick on a dealer. There is a vast amount of dishonesty, we hope unconscious rather than conscious, in autograph dealings, and when those who should be in a position to know—the few recognized dealers—stoop to deceive, it is well to call attention to their position.

Worthington C. Ford.

Washington, May 20.

BETTER ELEMENTARY TRAINING NEEDED.

To the Editor of The Nation:

Sir: The editorial paragraph in your issue of May 7 concerning higher education in the South suggests to my mind the reflection that what is really needed is elementary training, a foundation. I meet again and again young women, college graduates, who cannot write two pages of good English on current topics. A good foundation, a good elementary education, prepares for college or life.

The country is cursed with schools and teachers who propose to prepare pupils for some specified goal. Ask pupils or teachers of these schools or classes to give a résumé of the career of Julian the Apostate; ask them to sum up the main points of Browning's "Toccata of Galuppi's"; allow from one to three days for preparation after assignments are made, and watch the result. To read the classics of one's own language readily and to be able to summarize in language fairly correct the result of the reading is a distinct gain in intellectual activity; and should form a test at every stage of preparation.

L. G. Crozier.

Cincinnati, May 14.

AN ANCIENT BATTLEDORE FOR QUAKERS.

To the Editor of The Nation:

Sir: The word *battledore* was doubtless originally applied to the horn-book on account of its resemblance to that instrument.

In the eighteenth century Benjamin Collins of Salisbury, England, who was associated with John Newbery, immortalized by Goldsmith in his "Vicar of Wakefield" as "the philanthropic publisher of St. Paul's Churchyard," invented a three-folding cardboard A. B. C., containing also two short spelling lessons, the Lord's Prayer, the Arabic numerals, and six small wood engravings; the reverse was covered with the "flowery and gilt Dutch paper" then so much in vogue for the decoration of books for children. Collins called this "The British," "The Imperial," and "The Royal Battledore"—as there were three varieties, with slightly differing contents. Between 1771 and 1780 over 100,000 of them were sold at fourpence plain and sixpence colored.

But it would appear that the word battledore had at an earlier date taken wider hold of the public mind as connoting an instrument of education. Thanks to Dr. W. C. Lane, the librarian of Harvard, I recently encountered a rare and remarkable volume printed about 1660:

A
BATTLEDOOR
for
Teachers and Professors
to learn
Plural and Singular.
You to many and *thou* to one;
Singular one, *Thou*: Plural many, *You*.

That now why the teachers of the world, schollars and schoolmasters teach people and children which will not have People nor children speak *Thou* to *one* and *you* to *many* is not sense, nor good Latine nor good English, nor Greek nor Hebrew. Therefore to you that stumble at the word *Thou* to a particular is this.

The light which Christ hath enlightened you withall believe in the annoynting within you, you may know to teach you.
GEO. FOX.

This battledore deals not alone with the English language, but with Latin, Greek, German, French, Hebrew, Italian, Chaldee, Syriac, Arabic, Æthiopic, Welsh, Irish, Spanish, Low Dutch, Cornish, and others—thirty-eight languages in all—and each section is prefaced by a half-title printed in the exact shape of a horn-book or battledore, thus:

The
WELCH
Battledore

The insistence on the correct use of the plural and singular is full of tiresome reiterations; and the whole book is written in the involved and obscure style of the legends quoted above. It is not a little remarkable that many of the very faults in usage which this work seeks to correct were a few years ago still existing in common speech in remoter districts of England, and doubtless they survive in some places to-day. At the end of the book is a collection of curious and slashing criticisms of some of the educational books of the time, such as "Pueriles Confabulatiunculæ," "Colloquia Scholastica," "A Treatise of English Particles," by W. W., "Antient Adages and Sententious Proverbs from English, Greek, Latin, French, Italian, Spanish," by T. Drake. The whole book, which is most curious, is a painstaking and pedantic plea for the Quaker method of speech. The author, George Fox, founder of the Society of Friends, was assisted by John Stubs of Bishoprick and B. Furley of Colchester, both members of the same sect.

The book is very rare. The Harvard copy is well preserved in the original binding; a fine example in similar binding, but with brass clasps, is in the library of the Friends' Meeting House in Bishopsgate Street, London.

Charles Welsh.

Winthrop, Mass., May 12.

"BARBADOSED MEN."

To the Editor of The Nation:

Sir: Hardly a book about the great Civil War, the Monmouth rising, or the Jacobite rebellions of 1715 and 1745 has been published but some reference is made to prisoners transported to Barbados. "We have made an active verb of it, 'to barbados you,'" notes Carlyle in Cromwell's "Letters and Speeches." But as soon as these broken men are shipped from England, darkness falls upon them. For all one hears of them afterwards they might have passed into the tomb.

First of the voyage. What was their experience, pent for four or five weeks aboard that small vessel, bound for America? Is anything preserved that describes such a voyage? Are we afforded at all a glimpse into the hold of a vessel whose cargo was Irishmen from Drogheda, or Redshanks from Dunbar, or West Countrymen from Sedgemoor? In his valuable "Original Lists of Emigrants," John Camden Hotten published some bills of lading of the Betty, the John Friggat, and the Jamaica Marchant, conveying Monmouth rebels to Barbados, from which one may gather the mortality on the passage—the number and names of those who, in the brutal words of the lading, "dyed since they were reced on board and were thrown over board." What of vessels conveying other prisoners of war? Is anything preserved, in British or American libraries, showing what were the conditions aboard?

Then secondly, what of life in the plantation itself? After the vessel had anchored in the bay and the planter had boarded and had bought what men or women he wanted and had sent them ashore to be taken to their wattle-and-daub hovels, what of the bondservant as he toiled day by day, along with the African, under a Barbados sun? In his "History of Barbados," Ligon has described briefly the "Christian" as observed in Barbados during three years, 1647-50. Unfortunately Ligon was more interested in the natural history of Barbados than in "barbadosed men," and he devoted many pages to the pineapple and the palmetto royal that one would he had devoted to the Christian servant. There were many wild Irish in Barbados then—skulking in part among the wooded and inaccessible gullies—and there were also a few kilted Scots, one of whom, kilt and all, adorns Ligou's map of the island. But in a volume of 122 delightful pages the "Christian," poor wretch, is dispatched in three.

Apart from Henry Pitman, whose "Relation," reprinted by Professor Arber, is disappointingly barren about Barbados, did no bondservant write some small account of the island? Many of the prisoners of war were illiterate: of 127 men "barbadosed" after Culloden Moor, 115 attested their indenture by mark; but some were penmen of a sort, and a few, such as Pitman himself, were educated gentlemen. Did they not pen an account of their lot in Barbados to kin in Dorsetshire or Argyll? In a volume of the Lauderdale Papers, it is stated of the Highlanders at the end of the seventeenth century that "the Barbados doth no longer terrifay them." One may therefore infer that some bruit of Barbados had reached Scotland in some way.

Perhaps something may be preserved in the State libraries or manuscript collections of North America. The terms of banishment for those broken men were that they were to remain for the term of their natural lives, "in some one or other of the American Plantations." Hotten shows (pp. 347-418, "Tickets granted to emigrants from Barbados") that many bondservants after their times were out, passed on to Virginia, New England, and other North American plantations. It is not unlikely that some of the emigrants were prisoners of war whose seven or ten years indenture had expired. Is any instance known of a prisoner of war, hailing from Barbados, writing a paper or publishing a pamphlet of his sufferings in that island, after he came north? Of an evening, he may have told his sad story to a friend who, feeling the pathos of it, used it in a small way, as well as the town printing-press would allow, for literary purposes. Reference to any book, pamphlet, or manuscript that would throw light on the bondservant's voyage to Barbados, his labor in that island, or his adventures afterwards when he passed to the Northern plantations, would be welcomed by the writer. I exclude the books already quoted, also the Calendars of State Papers, Am. and W. I., which are available in British Guiana.

J. GRAHAM CRUICKSHANK.

Audit Department, Georgetown, British Guiana, May 11.

Notes.

The R. E. Lee Company announces the first edition in book form of William Austin's "Peter Rugg, the Missing Man," which, as it appeared originally in the *New England Galaxy*, for September 10, 1830, excited much interest and comment throughout the country. The sequel, written by Austin a few years later, will also be included in the new publication. Col. T. W. Higginson, in an Introduction, writes of Austin as a precursor of Hawthorne. Another reprint from the R. E. Lee Company will be "The Debate of the Body and the Soul," which some years ago the late Prof. F. J. Child of Harvard modernized from an early fourteenth-century manuscript, and printed privately as a gift for his friends. To the present issue Prof. G. L. Kittredge contributes an Introduction.

Early next month G. P. Putnam's Sons will publish Garrett C. Pier's "Inscriptions of the Nile Monuments," a book of reference for tourists, which gives translations of the inscriptions along the river, with comments by the editor and illustrations. From the same house will come John M. Dillon's "Motor Days in England."

Henry Altemus Company of Philadelphia announces a forthcoming book by Grover Cleveland, called "Good Citizenship."

As a sign of the times, we note the appearance of the first number of the *American Colonial Review and Intertropical Magazine*. There is also an edition in Spanish, though the matter is not entirely identical with that in the English copy. The aim of this new venture is, as stated by the editor, L. V. de Abad, to discuss "the questions and facts of peculiar interest" both to Spanish Americans and citizens of the United States, giving "due weight to the aspirations of each country." We observe in this issue for May a long article on Cuban affairs, with particular reference to Gov. Magoon's official report. Referring to the proposed elections next April, the *Review* urges delay, saying:

> We are not so optimistic as Mr. Magoon. Apart from the many details that must be attended to prior to an election, it is desirable that when the drafts of the municipal and election laws made by the Advisory Commission are published they should be seriously considered by the Cuban people; and the time spent in weighing the opinions of the Cuban people as to these laws will not be time lost.

John Halsham's "Idlehurst," or, as the sub-title properly runs, "A Journal Kept in the Country," after a life of ten years, has been brought out in a second edition by E. P. Dutton & Co. The book is unchanged, save for a few verbal corrections.

E. P. Dutton & Co. send out fifty-three volumes which have just been added to Everyman's Library. Notwithstanding the lowering of the price, the quality of printing and editing has been maintained. In the department of Religion and Philosophy we note Sir J. R. Seeley's "Ecce Homo," with an introduction by Sir Oliver Lodge; and Rowland E. Prothero's "Psalms in Human Life"; in the Classics, the second volume of Euripides, translated by Shelley, Dean Milman, and others; in Poetry and the Drama, Chaucer's "Canterbury Tales," edited for the modern reader by Arthur Burrell; George Herbert's "Temple," with an introduction by Edward Thomas; Herrick's "Hesperides" and "Noble Numbers," by Ernest Rhys; Wordsworth's Longer Poems, also edited by Mr. Rhys; and Cary's Translation of the "Divina Commedia," edited by Edmund G. Gardner. In the Chaucer the spelling has been "slightly modernized"; moreover, "some care has been taken to preserve Chaucer's melody." The additions to Essays and Belles Lettres are Thoreau's "Walden," by Walter Raymond; Emerson's "English Traits" and "Representative Men," by Mr. Rhys; Ruskin's "Ethics of the Dust," by Grace Rhys; Carlyle's "Sartor Resartus" and "Heroes and Hero-Worship," by William Henry Hudson; and Machiavelli's "Prince," translated by W. K. Marriott; to Travel and Topography, Marco Polo and Vols. III. and IV. of Hakluyt's "Voyages," edited by John Masefield; Giraldus Cambrensis's "Itinerary Through Wales," in the translation of Sir Richard Colt Hoare, edited by W. Llewelyn Williams; and Lane's "Manners and Customs of the Modern Egyptians," by Mr. Rhys; to History, Arthur Murphy's translation of the "Annals," the "Germania" and the "Agricola" of Tacitus; and Creasy's "Fifteen Decisive Battles of the World," by Mr. Rhys; Parkman's "Conspiracy of Pontiac," and Prescott's "Conquest of Peru," by Thomas Seccombe; to Biography, Cromwell's "Letters and Speeches," as presented by Carlyle; Lewes's "Life of Goethe," with an introduction by Havelock Ellis; and Voltaire's "History of Charles XII.," translated by Winifred Todhunter, and introduced by John Burns. Mr. Burns says: "To Charles the Twelfth of Sweden I owe much of what has stood me in best stead all my life." In the section of Romance the Niebelungenlied is translated by Margaret Armour. Fiction includes Defoe's "Memoirs of a Cavalier" and "Journal of the Plague Year"; Goldsmith's "Vicar of Wakefield"; Thackeray's "Vanity Fair," with an introduction by Whitelaw Reid; Dickens's "Little Dorrit," "Our Mutual Friend," "Hard Times," "American Notes," "Pictures from Italy," and "Child's History of England"—the latter volumes put under this head in order to make up a uniform edition of Dickens; Blackmore's "Lorna Doone"; Charlotte Brontë's "Jane Eyre" and "Shirley"; Charles Kingsley's "Hereward the Wake"; Reade's "Peg Woffington" and "Christie Johnstone"; Herman Melville's "Omoo"; Stevenson's "Treasure Island" and "Kidnapped"; and translations of Balzac's "Les Chouans," "La Recherche de l'absolu," and a volume of short stories. For Young People there are Kingsley's "Water Babies" and "Glaucus"; Abbott's "Rollo at Work" and "Rollo at Play"; and Ballantyne's "Ungava."

The Beacon Biographies of Small, Maynard & Co. have been resumed, after the silence of several years, with a volume on "Edgar Allan Poe," by John Macy. It is written in a subdued key, with here and there an epigrammatic touch. Mr. Macy tells the familiar, sad story, neither extenuating nor condemning. His critical comment, interspersed throughout the narration, runs for the most part in the common groove, although occasionally we can not follow him. Thus, there would seem to be some lack of appreciation as well as a union of things disparate in such a paragraph as this:

> The same persons will be haunted by "The Raven," and all Poe's best poems, who respond to the divine insanities of Blake, the sometimes hollow enchantments of Mr. Swinburne, and who are fain to worship the painted lady leaning out from Rossetti's painted heaven. For the rest, as Neal said, "Why waste words upon them?"

As an aftermath of the one-hundredth anniversary of Whittier's birth, celebrated at the Essex Institute of Salem, we have a reprint of Mrs. Abby J. Woodman's "Reminiscences of John Greenleaf Whittier's Life at Oak Knoll, Danvers, Mass." Whittier went to live at Oak Knoll, the home of Col. Edmund Johnson, in 1875. This was in the full tide of his fame, and Mrs. Woodman's reminiscences bring in the names of Paul H. Hayne and other pilgrims to the old poet. The booklet contains, also, a list of the first editions, portraits, engravings, manuscripts, and personal relics of Whittier exhibited at the Institute at the time of the centenary.

"The Poets: Chaucer to Tennyson" (Henry Frowde), is the title of William Stebbing's two volumes, but its sub-title, "Impressions," should not be omitted. The work is not impressionistic in the technical or reprehensible sense; there is no flaunting of personal opinion against tradition, no wanton romanticism, no sceptical trifling, no striving after subtle and questionable effects. It is merely that the author has chronicled the various pleasures impressed on his memory during many years of intercourse with the English poets. The pages are not rich in ideas or striking discriminations, but they are sound and genial, and might well entice a hesitating reader back to the paradise of English dainties. Mr. Stebbing exhibits no theory of inclusion or elimination beyond what has given him pleasure, but his pleasure is conditioned by a genuinely cultivated taste. He can begin one section with the words "I rank Crabbe among the great poets," and immediately afterwards can speak of Blake as "a poet-prophet, who sang and prophesied for fifty years to a stone-deaf people." And this, we take it, is not the result of a desire to be universal, but of much and wise reading. Even the American poets—Emerson, Poe, Longfellow, and Lowell—receive full and just treatment. The quotations are so abundant as to make of the work a book of elegant extracts. Not an important work by any means, but one pleasant to read.

The second edition of Vincent Arthur Smith's "Early History of India" (New York: Henry Frowde), coming so soon after the first, duly reviewed in these columns (see *Nation* of February 9, 1905, p. 117), is a notable sign of the rapid progress of Indian studies. Half a century ago, Max Müller might well call the date of Chandragupta, or Sandrokottos, the "sheet-anchor of Indian chronology," and Whitney speak of all the rest as pins set up to be bowled down again. Travellers in Central Asia, archæologists, numismatists, epigraphists, and translators from Chinese, Arabic, Greek, Sanskrit, Pali, and Prakrit have changed all that, as Mabel Duff's "Chronology" and this "History" most clearly show. Alexander's campaign still occupies a large part of the book, as disproportionately ample as are the sources concerned. The Mauryan dynasty (B. C. 321-184), with the great figures of Chandragupta, Bindusara, and Asoka, takes only a few pages more; the reign of Harsha, twenty-three pages. The revision has been a careful one. Stein's travels compel the author to withdraw his identification of Mount Aornos with Mahaban. He holds the evangelization of Southern India by the apostle Thomas to be purely mythical (p. 222). Alexander, Buddha, and the famous pilgrims from China to the Holy Land of Buddhism—these are personalities which Mr. Smith's skill invests with the charm which is their due. The book has excellent maps and illustrations.

The tenth volume of Worthington C. Ford's edition of the "Journals of the Continental Congress" (Washington: Government Printing Office) covers the first four months of 1778. With the country settled down to the acceptance of a prolonged war, albeit cheered by the surrender of Burgoyne, the business of Congress becomes somewhat less miscellaneous, and time is found for much needed reorganization of the military administration. The controversy over the carrying out of the terms of capitulation at Saratoga led, January 8, to an order suspending the embarkation of Burgoyne's army; and it was not until March 3 that Burgoyne himself was allowed to return to England. Congress still looked with longing eyes upon Canada, and on January 22 empowered Lafayette to make an "irruption" thitherward; but March 2 the plan was abandoned, and the works at Ticonderoga were presently ordered to be destroyed. The treatment of American prisoners by the British gave rise to much discussion, and to a correspondence with Howe which Congress regarded as highly unsatisfactory. In the management of the business, Washington, just then the object of much secret machination, was aggrieved, and on April 10 Congress voted him an elaborate letter of explanation. The personnel of the army and navy received attention, the most notable items being the dismissal of Esek Hopkins, January 2, and the appointment, March 2, of Nathanael Greene as quartermaster-general. Another offer of conciliation from Great Britain was vigorously repudiated, the employment of Indians authorized, and liberal inducements to desert offered to British officers and soldiers. In the relations with France, the chief step taken was the conclusion of the contract with Hortales & Co. for furnishing supplies. The censure of Thomas Burke of North Carolina, in April, for refusing obedience to a call of Congress, is a rather amusing illustration of the jealous regard of that body for its dignity and authority.

The Humanist Library, edited by Lewis Einstein, the accomplished and scholarly secretary of our Embassy at Constantinople, has been augmented by a volume on "Petrarch and the Ancient World," by Pierre de Nolhac. It is scarcely necessary at this date to call the attention of cultivated booklovers to this interesting series, printed from special type by the Merrymount Press of Boston, and illustrating the happiest combination of intrinsic charm and external taste. Leonardo da Vinci's "Thoughts on Art and Life," with an introduction by the general editor, and "Erasmus on War," edited by J. W. Mackail, have already appeared; and Sidney's "Defense of Poetry," with an introduction by G. E. Woodberry, is to follow. M. de Nolhac's essay on Petrarch is an abridged version of his monumental work on "Pétrarque et l'humanisme," of which a second edition has just appeared at Paris. He has selected for translation those portions only which might interest the general reader; and the work in its present form is the pleasantest of introductions to the study of Petrarch's relations to the revival of learning and to the beginnings of modern classical culture. All critical apparatus has been dispensed with, and pedantry of any kind is wholly absent. The translation is not all that it should be, but is doubtless adequate for its purpose.

We are in receipt of the third volume (1907) of the "Annales de la Société Jean-Jacques Rousseau." The contents include "Les provincialismes suisses-romands et savoyards de Rousseau," by Alexis François; "Rousseau et Madame de Larnage," by Louis Aurenche; "Tolstoï continuateur de Rousseau," by I. Benrubi; "La Question du Pygmalion de Berlin," by Albert Jansen, Charles Malherbe, and Edgar Istel; and "Rousseau joueur d'échecs," by I. Grünberg. The Bibliography and Chronicle are as full as usual.

Prof. Friedrich Reuter of Erlangen, the well-known Rückert biographer, continues his contributions to the poet's life by publishing, under the title "Aus Friedrich Rückert's Leben. Nach Akten. II." (Ansbach: Brügel), a number of hitherto unknown Rückertiana from the thirties and forties of the nineteenth century. Most of them refer to the trials and disappointments of the last years of Rückert's stay in Erlangen, the troubles caused him by the reactionary Bavarian ministry, and the hopes of a new poetic activity aroused in him by the call to Berlin in 1841. It is pitiful to see how delusive these hopes were. Rückert was a recluse by nature, and he by no means filled the part which Frederick William IV. of Prussia desired him to play at his court. He felt out of his element in the brilliant and somewhat artificial intellectuality of Berlin salons; more than ever he retired within his own self. By concentrating his poetic power upon dramatic subjects, he attempted to win back the public attention which had been so richly accorded to his early lyrics. Thus there appeared between 1843 and 1845 the dramas "Saul und David," "Herodes der Grosse," "Heinrich IV.," and "Christofero Colombo"—all of which fell entirely flat. His activity as professor of Oriental languages, also, although it helped to produce such scholars as Paul de Lagarde and Max Müller, failed to attract the notice of wider cultivated circles. Apparently Rückert lacked the power of inspiring the many. So it came to pass that after a few years he would spend habitually only part of the winter in Berlin, devoting himself for the rest of the year to his garden and farm in the Thuringian Forest. The letters and documents published by Professor Reuter give many interesting details of this pathetic story.

"Allumschlingen: Melodien," by Emma Helbig (Munich: E. W. Bonsels), is a collection of lyrics from a new writer, who has marked individuality and promises even better things.

"Der Schimmelreiter," recently issued by Ginn & Co., is of interest to teachers of German as an additional story from Storm, author of the popular "Immensee." The editing is the combined work of Professors John MacGillivray of Queen's University, Kingston, Ont., and E. J. Williamson of the University of Manitoba. Although it may be difficult to persuade the admirers of Storm that anything could excel the tale of Elizabeth and Reinhardt, there are critics who regard "Der Schimmelreiter" as Storm's masterpiece.

How rich are the literary associations of the Germans on the peninsula between the North Sea and the Baltic may be seen from a welcome contribution to the literature of summer travel, "Meerumschlungen: ein literarisches Heimatbuch für Schleswig-Holstein" (New York: imported by G. E. Stechert & Co.), edited by Richard Dosche. The book is a compilation of selections from various authors. Some of the pieces relate to the theme *Heimat;* others tell of the coast country, its people and their customs; and still others are reminiscential. Only living writers are represented, some forty-four, all born in the district. There are twenty-nine illustrations, mostly full-page drawings, by Herman Linde. What first strikes one in wandering with these authors in their *Meerumschlungen* or sea-girt country, is the extent to which Nature has impressed their minds and led their fancy. The sea is ever before them, the storm is lurking near or already breaking upon the coast, the sandhills vary the monotony of the landscape. There is an index of authors, and a general index.

In his "Geschichte der neuesten Zeit vom Frankfurter Frieden bis zur Gegenwart," Dr. Gottlob Egelhaaf covers modern historical developments to February of the current year. The author is a veteran in the literature of contemporary events, his first work of this kind having been published in 1875. The new book deals with all the nations. (Stuttgart: Carl Krabbe.)

Of the "Acta Borussica," the great collection of material for the economic history of Prussia, especially during the eighteenth century, published by the Royal Academy of Sciences in Berlin and edited by Prof. G. Schmoller of the University of Berlin (Berlin: Paul Parey), the sixteenth volume has now appeared. It is announced that this work, of which the first volume came out in 1887, will not be completed for a quarter of a century.

Pastor Wilhelm Bruhn, in a book of 202 pages, entitled "Theosophie und Theologie" (Glückstadt: Max Hansens), describes first the modern theosophical movement, then explains the moral content of theosophy.

A recent small book by Pastor Johannes Steinbeck, "Das göttliche Selbstbewustsein Jesu nach dem Zeugnis der Synoptiker" (Leipzig: Deichert), aims to show that according to the Synoptic gospels also, and not only according to John, Jesus claimed for himself divine origin and character. The author defends, among other things, the virgin birth of Jesus.

In "Die wichtigsten Reformbestrebungen der Gegenwart auf dem Gebiete des Religionsunterrichts in der Volksschule" (Leipzig: Dörffling & Franke), Rector O. Eberhard, an experienced teacher of earnest Christian convictions, outlines the place of religion in popular education.

"Ohne des Gesetzes Werk" is the title of a new work by Prof. Georg Schnedermann of Leipzig, the special purpose of which is indicated by the sub-title, "Eine Anleitung zu selbständigem geschichtlichen Verständnis des Neuen Testaments." The work aims among other things to show the peculiar character of the New Testament system of truth even when that system is judged by the modern historical method. (Leipziz: Dörffling & Franke.)

The Orthodox Theological Encyclopædia, which was begun some few years ago, under the editorship of Prof. N. N. Glubokovskij, of the Ecclesiastical Academy in St. Petersburg, has now reached its eighth volume, coming down to the word Karmanov. This work is credited with being the best of the kind produced by the scholarship of the Eastern Church.

The programme for the fourth International Congress for Historical Sciences, to be held in Berlin August 6 to 12, is published in the *Internationale Wochenschrift,* No. 17. The work is to be divided into eight sections: (1) History of the Orient; (2) History of Hellas and Greece; (3) Political History of the Middle Ages and of Modern Times; (4) History of the Civilization and Thought of the Middle Ages and Modern Times; (5) History of Jurisprudence and Economics; (6) Church History; (7) History of Art; (8) Historical Auxiliary Sciences. No fewer than one hundred and fifty addresses have been announced. David J. Hill, recently appointed minister to Germany, will speak on "The Ethical Function of the Historian." The official languages will be German, English, French, Italian, and Latin.

After a half-century of collegiate teaching, Dr. Edward S. Joynes, professor of modern languages in the University of South Carolina, will retire in June, with the honor of a pension from the Carnegie Foundation. Probably few, if any, American professors have personally taught so many students in foreign tongues, and certainly no American professor living has so widely influenced the study of modern languages in America. Best known of all his many publications are the Joynes-Meissner German Grammar and his edition of Schiller's "Tell," but the many editorial acknowledgments in German, French, Spanish, and Italian works testify to the breadth of Professor Joynes's scholarship and his ready coöperation with others in the same field.

Prof. Hume Brown, well known for his work in Scottish history, has been appointed to the place of historiographer royal of Scotland, left vacant by David Masson.

Philip Loring Allen, a member of the editorial staff of the New York *Evening Post,* and a frequent and valued contributor to the *Nation,* died in this city May 26. He was born in Madison, Wis., in 1879, a son of Prof. William Francis Allen. After graduation from the University of Wisconsin, he came to the *Evening Post,* in 1899, as a reporter, and in the course of five years he rose by successive steps to the position of editorial writer. For his chosen career he had varied qualifications. Bookish from his childhood, he had read widely and his memory was tenacious. His keen interest in politics led him to amass information about public men and political movements, upon which he was able to draw quickly and instructively. He had a strong statistical bent, which gave body to his writing; while a vein of original humor lent a charm to his lighter productions. He was author of "America's Awakening" (1906), and of various short stories and magazine articles.

The death is announced from Paris of Madame de Witt, at the age of seventy-eight. She was the author of many stories for children and the translator of several important English works. As Henriette Guizot, daughter of the historian, she had assisted her father in his literary work, and had added a fifth volume to his "Histoire de France racontée à mes petits-enfants." In 1880 she published "Monsieur Guizot dans sa famille et avec ses amis."

Marcel Thibault, a promising historian, has died at the early age of thirty-three. He had already published "Isaheau de Bavière" and "La Jeunesse de Louis XI."

Franz Bücheler, professor of classical philology at the University of Bonn, has died in his seventy-first year. He was first professor at Freiburg, then at Greifswald, and in 1870 removed to Bonn. He wrote largely on classical subjects, and was an authority on Umbrian and other ancient Italian dialects.

From Altona comes the announcement of the death of Prince Emil Schönaich-Carolath, in his fifty-seventh year. After some experience in the army and extensive travelling, he had devoted himself to literature. His poems ("Don Juans Tot," "Lieder an eine Verlorene," etc.) and his novels ("Bürgerlicher Tot," "Adliger Tot," "Tauwasser") are in the tradition of Byron and Alfred de Musset.

SOCIALISM AND ITS CRITICS.

Capital: A Critique of Political Economy. Vol. II.: The Process of Circulation of Capital. By Karl Marx; edited by Frederick Engels; translated from the second German edition by Ernest Untermann. Chicago: Charles H. Kerr & Co.

A Critical Examination of Socialism. By W. H. Mallock. New York: Harper & Bros. $2 net.

New Worlds for Old. By H. G. Wells. New York: The Macmillan Co. $1.50 net.

An Inquiry into Socialism. By Thomas Kirkup. Third Edition. New York: Longmans, Green & Co. $1.40 net.

British Socialism: An Examination of its Doctrines, Policy, Aims, and Practical Proposals. By J. Ellis Barker. New York: Imported by Charles Scribner's Sons. $3 net.

English Socialism of To-day: Its Teachings and its Aims Examined. By the Rt. Hon. H. O. Arnold-Forster. New York: E. P. Dutton & Co. $1.25 net.

The Fundamental Fallacy of Socialism: An Exposition of the Question of Landownership, Comprising an Authentic Account of the Famous McGlynn Case. Edited by Arthur Preuss. St. Louis: B. Herder. $1.

The living philosophies of to-day are not those which at the bar of cool reason can proffer the strongest claims for recognition, but those which embody in largest measure the dominant class impulses of the age. Marx's Socialism sways thousands incapable of understanding a page of his work, because there slumbers in its ashes the hot resentment felt by the many against an industrial system which has raised their desires above their possible attainments. At the other pole, Nietzsche dominates the temper of those fierce individualistic strivings which have become calloused to collective needs and collective suffering. In a very true sense, therefore, it is impossible to "disprove Socialism," for Socialism is born not of proof but of passion. Its only disproof must come from remedying those conditions which give point to its paradoxes.

The present reprint of Untermann's translation of Volume II. of "Das Capital" from the second German edition varies essentially from its predecessor only in its more exact citation of authorities quoted. These were originally turned into English from the German without collating the renderings with the actual sources. Engels's prefaces of 1885 and 1893, now reprinted, indicate the intrinsic difficulty of reducing Marx's various manuscripts to a coherent and systematic whole. It is quite superfluous at this late day to enter upon any examination of Marx's system. To its devotees it is above criticism; to its critics its fallibility is self-evident. Marx's contention that value is merely the embodiment of labor-time, proportioned in each case to the duration of labor working with the customary mechanical appliances, has to-day few defenders even among advanced Socialists. This view neglects differences in productive capacity between the far-seeing enterpriser and the manual laborer. It assumes efficient machinery as springing automatically into being; and, worst of all, it assumes that value originates in the efforts of the producer rather than in the estimates of the consumer. Marx will serve, however, as a convenient point of departure in characterizing a recent swarm of writers who buzz around the eternal social question.

First comes the vivacious Mr. Mallock, with his so-called critical examination of Socialism. This volume, which begins with an examination of Marxian Socialism, owes its orign to the anti-Socialistic addresses made by Mr. Mallock in this country in the autumn of 1906, at the invitation of the Civic Federation. Haste in the preparation of the copy for the press must account for the absence of an index, and for such solecisms or misprints as occur on pages 38 (line 1), 61 (line 15), 89 (line 8), 146 (line 30), 185 (line 14), and 200 (line 9, note). It must be admitted that there is little in Mallock's criticism of Marx that is original. His attack is chiefly effective by reason of the sharp contrast he points between the Marxian doctrine and the Socialism of the succeeding generation. Marx contended, as Mr. Mallock puts it, "that, in justice, production and possession were inseparable." The later Socialists start with a truer theory of production, which recognizes the superior ability of the director of industry and his indispensable service in the organization of labor. "They reconcile this with their own practical programme, only by associating with it a false moral psychology" (p. 174)—false, because it assumes that the effort now put forth by hope of individual gain will be forthcoming in equal measure when rewarded only by inward satisfaction, supplemented by "the cheap coin of honor." The strength of Mallock as a critic of Socialism lies in his vivid realization of the essential rôle directive ability plays in production, and in his appreciation of the psychology of motive which underlies industrial activity.

Mallock's weakness inheres in his patent ignorance of the detailed economic criticism of the last two decades. By reason of this ignorance he revamps a number of discredited theorems. The first is his notion of "wage-capital," a tenuous reproduction of the old "feed and work" theory of wages. For decades, it was assumed that the laborer was absolutely devoid of the means of subsistence, and that real wages in the shape of food, clothing, and shelter were "advanced" by employers who figured in the double rôle of philanthropists and captains of industry. The truth is, as Edwin Cannan says:

> It is the exception and not the rule for wages to be paid in advance. As a rule work is only paid for after it is done; those who are paid by time are paid when the day, week, month, or quarter ends, and those who are paid by the piece after they have finished each piece of work, and not before

The second of Mallock's discredited theorems is the delusive idea that a definite fraction of the joint product of industry can be specifically traced to each coöperating factor. Still another example is his revival of Henry George's "natural productivity" theory of interest whose naïve *petitio principii* Boehm-Bawerk exposed years ago. Yet Mallock asserts gravely that the source of interest is found in the "gifts of unaided nature." The ram and the sheep are capital; the fleece and the progeny are interest. But he fails to consider the care, feeding, and pasturage necessary to secure this interest. Do untended flocks give rise to this sort of interest? Not if they are like the sheep we know. And if expense is requisite to secure the increment, what proof does Mr. Mallock give that the entire increment is not due to the labor of tending the flock? "Gifts of unaided nature" will bear more scrutiny than Mr. Mallock imagines. There are other defects in Mallock's *apologia* for the present constitution of industry, such as his clever but unfair travesty upon Christian Socialism. This creed has often been crude enough in all conscience, but to charge it with advocating "the maximum of idleness and self-indulgence" (p. 164) for the majority of the race, is neither generous nor true. Equally unconvincing is Mallock's argument as to bequest. If literary property of limited duration, such as that secured by copyright, is sufficient to evoke the present literary output, there is no certainty that a small impairment of the right of bequest would dry up the motives making for accumulation. With all his cleverness Mallock is unconvincing. To deal effectively with Socialism, one must have some genuine capacity for appreciating the need and the possibility of social betterment, and Mallock's work makes the impression of one whose social sympathies are atrophied.

Mr. Wells in his "New Worlds for Old" comes, towards the close of his volume, to the rescue of Marx; but so widely separated is Wells's social outlook from that of "Das Capital" that the praise sounds forced and strange. Marx was a true prophet, he tells us, and the "class war" was inevitable, "*given a continuance of our industrial and commercial system*, of uncontrolled gain-seeking" (p. 220). But the prophet did not foresee that a peaceful transition was possible through the gradual growth of administrative Socialism! Even this ambiguous vindication is qualified. The Marxian treatment of Socialism "arrested for a time the discussion of its biological and moral aspects altogether" (p. 243). Wells says truly that Marx's "conception of the world after the class-war is over is . . . antagonistic to intelligent constructive effort" (pp. 230, 231); and that Marx was a purblind believer in a "mystical democracy . . . supposed to be not only morally but intellectually omniscient." Wells properly ridicules this "diffused, intangible Oracle, the Ultimate Wisdom" (p. 231). But if the orthodox Marxian can derive comfort from this temperate approval, he is easily satisfied.

Wells's own constructive argument in this, his latest volume, is simply an allotropic form of his previous proposals. His title might with equal truth have been "New Words for Old," for this book does not present an essential project of Utopian Socialism which he has not elaborated before. He urges again the system of pensioning mothers for each child born to the state, provided always the Utopian parents have been duly licensed to have offspring. Presumably, the children of other persons are not expected to create any difficulty. The "spirit of service" is to supersede the "spirit of gain," although, curiously enough, Mr. Wells does not propose to "abolish competition," but to "leave men free to compete for fame, for service, for salaries, for position and authority, for leisure, for love and honor" (p. 107). This concession is the more remarkable in the lurid light of Mr. Wells's dictum that "self-interest never took a man or a community to any other end than damnation" (p. 105). Mr. Wells has a certain imaginative range denied to most writers on social philosophy. He invests the socialistic programme with a certain breadth of view which is refreshing after long journeys in the arid track of material betterment. He sees that Socialism can not be confined to the mere task of more amply provisioning the proletariat, that its implications are ramified, that it must transform much more than industry. There is thus a certain freshness about his presentation, even though he is not particularly convincing. One could hardly expect an index from a writer who is spawning volumes at the rate now characteristic of Mr. Wells; but it is disappointing to find him keeping up cheap tricks of style, such as his neologistic plurals—"wholesale prides," "these freedoms," "controls must be divided," and the like.

Of this entire batch of writers, Kirkup, in his "Inquiry into Socialism," which until now has been out of print since 1890, gives the pleasantest impression of genuineness and balance and a real covetousness of truth. Kirkup is a Socialist, but is fair-minded and open-eyed. At the very outset of his "Inquiry" he relegates Marx and his Social Democracy to the limbo of prejudice and tradition (p. 8). His examination of capitalism is conducted in an even temper. He recognizes the social value of competition when duly subordinated to moral principle (p. 70). He does not deny that the captains of industry perform a "useful function for the society in which they live" (p. 90). Most economists would incline to think him in error in his contention that in the long run machinery creates unemployment (p. 80), and that productive power can outstrip the capacity for consumption. But they would heartily agree with him that the proximate end of industrial reform is to elevate the plane of competition, and that "self-interest can be trusted as a principle of human nature only when placed under higher ethical guidance" (p. 161). Indeed, his concession that if "it really be the tendency of Socialism seriously to undermine individual responsibility, . . . it has no case" (p. 167), is all that any opponent of Socialism can fairly require so long as the argument is conducted in the abstract. His admission that it would at present "probably be hazardous to nationalize the railway system" would very likely prevent his admission into most orthodox Socialist communions; but it extorts the admiration of the unbiassed critic. Mr. Kirkup reminds us of the saying of one of Mr. Gilbert's heroines, the daughter of a bandit, who is described as sitting at her window when a worthy suitor passes:

> She cast her eyes upon him, and he looked so good
> and true,
> That she thought, "I could be happy with a gentleman like you."

We confess to a similar feeling for a Socialist like Mr. Kirkup. It is to be hoped that he may be spared the fate of his poetic congener, and escape being chopped up by his fellow-Socialists "into little bits."

Variants from the usual type of Socialism make serviceable such a book as Barker's "British Socialism"; for this volume enables one to obtain a conspectus of the views of typical Socialists upon the various concrete problems to which they direct their attention, such as the family, the empire, the land, the army, the railways, and a host of similar issues. Mr. Barker has consulted "altogether about a thousand books and pamphlets," and gives "representative extracts" from about five hundred of them. The very extended bibliography of sources which is appended includes not only the text-books addressed to students where Socialism is seen, as it were, on dress parade, but the equally illuminating and less widely known propagandist literature which is to move the masses when duly supplemented "by a liberal use of chest notes and red flags." It cannot be said, unfortunately, that the critical thread of comment which ties the illustrative extracts together is altogether fair or discriminating. The reliance placed by Mr. Barker on protection (page 480), as a means of remedying lack of employment in Great Britain, gives one pause as to his competence to serve as an economic guide. But he has collected an instructive and compendious anthology, whose most valuable feature is the latest official programmes of socialistic organizations which are printed in the appendix.

Arnold-Forster's book, "English Socialism of To-day," is a reprint of popular anti-socialistic articles which appeared first in the London *Standard*. It has all the faults and few of the merits of Barker's volume just noticed. It had originally the justification that its aim was polemic. The hits are often hard and fairly made, and are unexceptionable as everyday newspaper politics. But it was thrown off as a series of campaign articles, and the judicial quality is not expected under such circumstances. "A reasonable scheme of Fiscal Reform" will contribute, so the author imagines, to alleviate the evils which Socialism combats; and "the system of free imports is doomed by its inherent injustice and absurdity" (page 195). No index is appended.

Preuss's "Fundamental Fallacy of Socialism" is a rather belated echo of the McGlynn controversy, which arose out of that priest's espousal of the single tax doctrine of Henry George. The conclusions reached that "between Agrarian Socialism and the other Communistic forms there is no essential difference" (p. 181), and that "*private property in land* has the very same *natural basis as private property in general*" (p. 182) are unquestionably valid as general propositions. But they are not novel. They are at least as old as Grotius; and the late Professor Sidgwick conclusively made the same points against George's theory of the right to property many years ago.

CURRENT FICTION.

Rose MacLeod. By Alice Brown. Boston: Houghton, Mifflin & Co.

Miss Brown's vein of whimsical romance still holds; it may be that the whimsy gains upon her a trifle. In this story, indeed, it runs pretty frankly into extravagance. The general situation is not quite amusing or moving because it is absurd; and the probability of some of the persons is obscured by the flat impossibility of the others. This story-teller is in the habit of getting her effect by well-known means: by bringing together as the chief romantic pair two persons between whom some picturesque disparity exists, whether of age or tastes or social position. Or it may be that the disparity is between the person and his aspirations. This book provides us with an old lady who has retained all the impetuosity and irresponsibility of youth in contrast with her housemate and granddaughter, who is the well-trained and exemplary young woman of the present generation developed *ad absurdum*. Madam Fulton is hard enough to believe in and it is not easy to say whether her belated kittenishness is more engaging or annoying. But Electra is an intolerable caricature of the female prig; it is impossible that any of these persons should have endured her for a moment. In the end, to be sure, she actually fulfils Madam Fulton's prediction by "flying all to pieces and making an idiot of herself," but we feel that it is a late retribution for all that she has made us suffer.

Rose MacLeod, the real leading lady, is daughter of Markham MacLeod. He is leader of a Brotherhood; his headquarters are in Paris. He inspires the utmost personal devotion in his followers, and has the air of an apostle, though only, as his daughter has reason to know, a demagogue and time-server. He has deliberately sold her girlhood to a handsome rake who, after abusing her for a year, luckily dies. The father, who has been unable to make terms for marriage, has persuaded her that the ceremony is a farce, and she has lived with Tom Fulton (brother of the immaculate Electra) without being legally his wife. After the lover's death, MacLeod conceives other plans for turning her to profit, this time in connection with a prince, a morganatic marriage being the arrangement somewhat vaguely spoken of. She escapes to America under the escort of a friend, one Peter Grant, a brilliant young painter, who chances to be the betrothed of Electra. That model person refuses to accept Rose as her brother's wife; and she is left to the hospitality of the Grants, Peter, the artist, Osmond, his brother, and their grandmother, whose virtue is a foil to the frivolity of poor Madame Fulton. Peter is presently freed by Electra and discovers that he is in love with Rose, but she is not for him. Osmond is the person fated (by disparity) to become consort of the beautiful young Parisian. A cripple from birth, he has brought himself by a life of the utmost abstemiousness and regularity to a condition of great physical strength, though he is a hunchback. As market-gardener and seedsman, he has not only supported himself and the grandmother, but given his brother the best training in his art. His life is almost a hermit's, and he instinctively withdraws at the coming of the beautiful stranger. But she seeks him out, and an extraordinary intimacy springs up between them, which, after many struggles of compunction on his part, is eventually confirmed in the natural way. Certainly Osmond and Rose are a romantic pair of more than common interest. We could wish them uncompromised by the crude absurdity of Electra, the crude villany of MacLeod.

Home from Sea. By George S. Wasson. Boston: Houghton, Mifflin & Co.

A connoisseur has recently said that among reproductions of the Maine fisherman's dialect, Mr. Wasson's stand preeminent for truthfulness. It is easy to believe this in reading or rereading the stories old and new that are brought together in his latest volume. The absence of the stage Yankee phrase strikes even the inexpert linguist. The genuineness of words and sentences that only generations of seafarers could have evolved and that only generations of salt could have preserved, attests itself on every page. The originality of the stories does but add to their credibility. Two of the hitherto unpublished ones deal with dry land exclusively. "Keeping Tally" shows an old couple soothing their latter days with patent medicines and striving not to lose their reckoning; while "Skipper Haultaut's Wooing" defines amusingly an isothermal line beyond which the Killick Cove aspirant declines to adventure for the "toney rusticator." Illustrations by the author have always the advantage of fitting the text. One of these perpetuates the moment when "the breeze commenced to mortify down"—priceless phrase.

An American Patrician: Or the Story of Aaron Burr. By Alfred Henry Lewis. New York: D. Appleton & Co.

This is an ultra-lively galloping picture of the times. No modern newsboy could call the day's news on the highways with more disregard of classic forms; consequently it possesses a measure of novelty in the handling and unquestionably brings history and historic persons "up to date." Each character has his own adjective, which he carries with him till death doth them part—even "to the point of childish," if we may paraphrase one of Mr. Lewis's favorite idioms. Burr is "young Aaron" till he outgrows the epithet; Gen. Putnam is "the old wolf-killer"; Washington "the big Virginian," or "the big general"; Jackson, "lean Jackson"; Schuyler, "rusty Schuyler"; Theodosia, "lustrous Theodosia";

Hamilton, "Son-in-law Hamilton," when he is not "Terrier Hamilton" taking "skulking refuge behind Mastiff Washington." Other violent mannerisms disfigure the pages.

There is no rehabilitating of anybody. Gen. Putnam comes off rather well; Washington not quite so favorably; Marshall hovers in a half-light. Burr is not idealized, but Hamilton is depicted as "utterly the sycophant, wholly the politician." That there is a vividness which puts the wars, factions, and policies of the day in gay colors before us is not to be gainsaid. The truth of the colors may well be questioned. As to the method of putting on colors there can be no question.

The Golden Rose. By Amélie Rives. New York: Harper & Bros.

It is to the author's credit that although this story deals with an abnormal situation the characters are all sweet at heart. The heroine, though too much occupied with her own soul, means generously and well; and she is charming with the charm of the Virginian. The confidante in white muslin is sane and sound; the family doctor is astute; the hero fantastic but engaging; the negroes the very real thing. So that one assists at a dissection in irreproachable company. The author's greatly tempered style, too, materially helps the patience of the reader. To be sure, things "volume"—such things as wind and electricity; and other things, like ecstasy and music, are "white"; but it might have been, and used to be, much worse.

The heroine has outlived a cruel married experience, and by natural nobility and Indian philosophy has attained a high plane of peace and freedom whence she renouuces marriage forever. Then comes a young man who has looked deep into sunsets and high into stars, and who, above all, "understands." He falls to worshipping the woman; she, fully persuaded that their souls have met in earlier states of being, drifts into ecstasy, and for a time they live in a lofty paradise, he adoring, she adored, and both content. Then, in enforced absence, the man's attitude relaxes ever so little from unquestioning acceptance of this airy relation. She awakes from her dream and returns to companionship with things eternal. The most unreal part of the matter is that this ending should be called by the sensible doctor and the sane friend a failure on the part of the man, whom they find to have been "too little for the great moment." The exceptional experience of the woman may well have made of her a being apart. That her friends should demand for her the impossible is to make them unnatural, too. On the whole, the abnormal, however loftily treated, is unsatisfactory, even where, as in the Englishman's estimate of Indian pudding, "it isn't as nasty as it looks."

Monologues. By Beatrice Herford. New York: Charles Scribner's Sons.

Those who know Miss Herford's inimitable monologues in the actual delivery naturally open this volume of six with a slight misgiving—a prevision of a pang as at looking upon a form whence the spirit has fled. But such is the compulsion of great talent that every word and phrase and pause reads itself in Miss Herford's well-remembered way and "again we see our bliss at hand." And there is also pleasure for those who have not heard them, for these sketches are life itself. If, however, they were merely life they would be as dull as a haphazard photograph; but they are life with a comment conveyed in a laugh.

Oliver Herford's illustrations are marked by humor and fitness, but it is to be observed that even he shrinks from a literal transcription of "that Remson girl's hat."

Ancient Italy: Historical and Geographical Investigations in Central Italy, Magna Græcia, Sicily, and Sardinia. By Ettore Pais; translated from the Italian by C. Densmore Curtis. The University of Chicago Press. $5.

The work is a collection of twenty-six papers originally printed at widely different periods, either in the proceedings of various Italian societies or in separate pamphlets; in either case they came before a limited public. Unfortunately the translator has failed to give the dates of the several publications, and the reader is unable to take into account the condition of knowledge under which each article was produced. Among the papers most interesting to the student of history are "Ausonia and the Ausonians," "The Origin of Siris," "The Expedition of Alexander of Epirus to Italy," "The Pretended Expedition of Agathocles against Φοινίκη," "The Daunians and Umbrians in Campania," "Naples and Ischia at the Time of Sulla," "Siceliot Elements in the Earliest History of Rome," "Italiot and Campanian Elements in the Earliest History of Rome," and "Concerning the Time and Place in Which Strabo Composed His Historical Geography."

The first illustrates the author's method and the importance of his conclusions. As regards the Ausonians (Latin Aurunci), Huelsen, in Pauly-Wissowa's "Real-Encyclopädie," I., 2561, states that they were limited to the small strip of coast between the Volturnus and the Liris, and that the application of the name to a wider area is due to the inventions of Alexandrian scholars. From a study of the early sources, especially those of the fifth century B. C., our author concludes, on the contrary, that these people once inhabited a large part of southern Italy, in fact "the entire portion of the peninsula which was bordered by the Apennines," including Samnium in the interior and Latium on the western coast. This wide extension of the name preceded the Iapygian, Etruscan, and Samnite invasions. These results of research in literature he finds confirmed by the toponomy of the region. Anthropology, archæology, palæology, and linguistics, on the other hand, have not been pursued in a direction, or with sufficient precision, to throw light on the subject. The papers of which this is an example form a contribution of the highest value to our knowledge of the early history of Italy. It is interesting to find the man whom from our acquaintance with him in his "Storia di Roma" we are accustomed to regard as the arch-skeptic, appearing in this volume as a valiant defender of historical faith against the onslaught of German skeptics. Moreover, the author lays us under obligation by indicating the cultural relations of the Italian peoples to one another and to Greece, and by suggesting the lines along which these connections may be further investigated. Early Rome has been studied as an isolated community till no more progress can be looked for along that narrow path. The more liberal, and we may hope more fertile, research of the future will have as its object Rome as an Italian community, developing under the influence of intercourse with her neighbors and especially with the superior civilization of the Greek settlements in the peninsula and in Sicily.

In the face of the author's minute specialization in his field, scholars will be cautious in dissenting from his interpretations, and in impugning his accuracy. On p. 233 he states that the Roman annalist assigns the Cassian treaty with the Hernicans to 494 B. C., whereas in fact the annalist's date is 486, as Pais correctly gives it in his "Storia di Roma," I., p. 432. The error may, however, be in the translation. As regards Pelasgians in Italy (p. 71), although it may readily be admitted that people called Pelasgians by one or two ancient writers migrated in early time from Epirus to Italy, it is extremely doubtful whether such people were known to themselves by that name. All studies of Pelasgism should take account of Eduard Meyer's careful paper on the subject. Such minor criticisms, however, should not detract from the sincere appreciation of the profound knowledge and the intellectual keenness of the author.

The volume is printed on good paper in large type, and is illustrated with numismatic cuts and full-page plates. A comparison of one of the papers with the original indicates that the translator has been faithful; but he has left an excessive number of misprints; and, still more unfortunately, his English is defective in grammar as well as in general smoothness and lucidity.

Collection des poètes français de l'étranger. Publiée sous la direction littéraire de Georges Barral, 14 vols. Paris: Fischbacher, 1897-1907. 3fr. 50 per vol.

This interesting collection was started with a view to making known to a wide circle of readers the best of contemporary French poetry produced outside of France. The series contains not a few works of high and permanent value; indeed, the French Academy has crowned three of the volumes. The editor's programme is ambitious: he intends to scour the earth in quest of poets who, in the words of his *note explicative*, "ont adopté notre verbe pour assurer à leurs ouvrages une parure de beauté et un élément de pérennité." He thus hopes to encourage more and more the cultivation of French letters abroad.

As was natural, he first took Belgium, so near the French heart in feeling and in culture. Moreover, the literary reawakening which began there about 1880 has produced, besides the writers who eventually gained wide fame—Maeterlinck, Rodenbach, Verhaeren, Lemonnier, and Eckhout—a number of poets, of less striking originality and somewhat younger in years, who had not yet won the ear of the large reading public. The first volume was "La Nuit," by Iwan Gilkin (1897), a work of an inspiration similar to that of Beaudelaire's "Fleurs du mal," yet differing in tendency. Whereas both are products of the *décadence,* and permeated by an atmosphere of sin, death, and corruption, "La Nuit" contains a philosophical and critical vein totally lacking in the "Fleurs du mal." Gilkin sees the evil around him, and though he himself may be affected by the virus, yet he studies its effects objectively as the physician might study a disease. In style he is a strict follower of the Parnassians and is one of their best pupils. His next volume, "Le Cerisier fleuri" (1899), preceding the other in composition, is less pessimistic, yet of less uniform excellence. His "Prométhée" (1899) is a philosophical poem of some four thousand lines, in which the Prometheus legend is treated in an original and poetic manner. As a whole, it is the most notable poetic effort of the school of Young Belgium, and is not unworthy of comparison with Goethe's fragment or Shelley's poem on the same subject. In treatment it differs from both in that the poet has cleverly incorporated in the legend the modern evolutionary and monistic theories and has thus imparted a new philosophical significance to the antique story.

Valère Gilles has also three volumes in the Collection: "La Cithare" (1897, crowned by the Academy), "Le Collier d'opales" (1899), and "Le Coffret d'ébène" (1901). Of all the Belgians Gilles is perhaps the most Parnassian. His style is limpid, flawless; his rhythm masterly, and apparently of more concern to him than the subject matter. Attracted chiefly by the beauty of form, his mind naturally lingers in the sacred groves of Greece:

> Loin de ce siècle vil et des laideurs humaines
> En des temps disparus, dans un rêve enchanté,
> Je t'évoque aujourd'hui, foyer de la Beauté,
> Ville-fleur, Ville-femme, ô lumineuse Athènes!

He has all the Parnassian coldness; yet here and there, especially in "Le Coffret d'ébène" and "La Cithare," we catch glimpses of his inner emotions, of his soul's *Heimweh,* dear to all decadents.

Of Albert Giraud the Collection contains "Héros et Pierrots" (1898), both original and graceful. These droll clowns, singing their love ditties to a listening, pale moon, are as absurd and as unreal as the conventional birds and flowers on a Japanese screen. Yet their humor is irresistible; and their quaint complaints voice a real pathos. Besides, what they sing is never flat; is always pretty, sometimes beautiful; frequently as full of music as these lines of Pierrot Narcisse:

> Vos concetti sont lourds à côté des flocons
> De la neige qui tourne et qui valse et qui chante!
> Tombe hermine des cieux sur la cité méchante,
> Tombe comme un pardon sur ces êtres épais!
> Couvre-les de candeur, de silence et de paix!

Not all Giraud is in this volume. Other manifestations of his talent are published elsewhere.

Other Belgians are represented in the series: Ferdinand Séverin with "Poèmes ingénus" (1899), Paul Brogneaux with "L'Isolement" (1901), and Adolphe Hardy with "La Route enchantée" (1904), each of a different type, but all interesting. Particularly notable is "Poésies choisies" (1901), by André Van Hasselt, the friend of Victor Hugo, the first good French poet the nineteenth century produced in Belgium, and the first since the sixteenth century who has seriously tried to adapt classic and Germanic metres to French poetry. His experiments in this direction are worth more than passing attention.

From Belgium the editor turned to Switzerland for "Théoduline" (1906), a Valaisan idyl in one hundred short poems, by a monk of St. Bernard, Abbé Jules Gross. No ultra modern inspiration is here discernible, save perhaps the freedom with which the poet has handled his metres and the use he has made of local and dialectic terms, carefully explained, however, in an accompanying glossary. The subject is a naïve and touching love story unfolding itself on the sublime stage of an Alpine village. The simple and patriarchal life is depicted in fresh colors and with loving touches.

> Je vous peindrai d'après nature,
> Mes braves et chers Valaisans

forms a fitting dedication to this volume.

The two latest additions to the Collection are in many respects the most interesting. They are "Années tendres" and "Poèmes de la mort," both published in 1907. The most noteworthy fact about them, apart from their high literary quality, is that they come from Hayti and that their author is a mulatto, Etzer Vilaire. He was born in 1872, and educated in the city of Jérémie, where he holds at present the position of principal of the national lycée. In his own country he is favorably known as a writer, but outside of these narrow confines, no one was aware of his existence until Mr. Barral brought out his poems in Paris. Etzer Vilaire writes in the purest of French, and shows astounding facility in the most difficult forms of verse. Moreover, he has a message. It is indeed something quite uncommon, this *Weltschmerz* of a cultivated and extremely sensitive colored man, whose vision of a higher destiny for his race is continually blurred by the pall of native and social disability that hangs over the black soul; whose beautiful dream of intellectual, moral, and artistic emancipation is ever destroyed by evidences of the grossest materialism round him; and whose heart bleeds from all the wounds inflicted on his wretched native land. His African strain, passionate and revelling in color and sound; his careful French culture, imposing restraint on his native exuberance; his feeling for the charms of climate and scenery, his ardent love for a country torn by dissension—all this is reflected in his writing. For us who receive our impressions of Hayti from newspaper reports of political intrigues and excesses, it might be useful to read Vilaire's verses in order to convince ourselves that above the class of political agitators is an intellectual élite which is gradually gaining ground and may some day command the attention of the world.

Our Struggle for the Fourteenth Colony: Canada and the American Revolution. By Justin H. Smith. 2 vols.; with 315 illustrations and 23 maps. New York: G. P. Putnam's Sons. $6 net.

This work has certain features which are most praiseworthy, and at other points it provokes severe criticism. The merits that must receive hearty commendation are breadth of reading, and a desire on the part of the author to present his results in an agreeable form. There can be no doubt regarding the range of Professor Smith's research. Bibliographies and footnotes are sometimes misleading, but here, where the text shows full grasp of the subject, the notes and bibliography confirm one's sense of the care which has been taken in preparation. Now and then a question might be raised about a point of fact. For example, we cannot believe that Professor Smith is right in saying that the fort at Chambly "was a summer hotel rather than a fortress." But the strongest impression is that the book rests upon first-hand investigation.

Although Professor Smith desires, as we have said, to tell his story in entertaining style, yet the book is far too diffuse. History, if an art at all, should be looked on as an art of selection, and Professor Smith apparently cannot bring himself to throw overboard much of his superfluous cargo. Whoever courts picturesqueness must employ details, but there is reason in all things, and here the town is obscured by the houses. Reduced to a single volume, the work would be far more effective. We may cite a single passage which shows not only that he is diffuse, but that at times style runs away with him. It is taken from a character sketch of Richard Montgomery:

> Like a Damascus blade, his will could bend until point and hilt met, or work its way through a problem like the wards of a lock; yet for that his blade never ceased to be a sword. By yielding he could conquer; and in bowing to the unwisdom of others, he could bring it into close contact with his own sagacity and put it out of countenance.
>
> One had to sally a little from the realm of prose to understand his character. This Damascus blade had an Æolian cord strung in its groove, and every stroke was a song —a song from Tara's ruined halls, powerful but sad, and yet forever breaking into a sparkle of gayety like the waves on the beaches of Sligo.

C'est magnifique, mais ce n'est pas la guerre! Nevertheless, these volumes, in spite of the multitudinous details which make it difficult to follow the story episode by episode, are a distinct contribution, not to be neglected by any who would study the invasion of Canada in 1775.

Science.

Earthquakes: An Introduction to Seismic Geology. By William Herbert Hobbs. Pp. xxxi., 336; pls. xxiv., figs. 112. New York: D. Appleton & Co. $2 net.

It is twenty-five years since the first edition of John Milne's "Earthquakes and Earth-Movements" appeared and made accessible to the general reader the causes believed by geologists to lie behind these mysterious phenomena. Meantime, however, methods of investigation have been improved, and in the transactions of learned societies many new and accurate observations have been recorded. The so-called "new seismology" has so developed that the time is ripe for a book to gratify an intelligent interest which has been greatly stimulated by recent shocks of impressive violence. For more than ten years past Professor Hobbs has been investigating the indications of past disturbances as recorded in present topographic relief, and has developed somewhat positive views upon so-called "earth lineaments." These views have seemed to many geologists as rather extreme, and to others as resting on a solid substratum of truth. Professor Hobbs's experience in America has been supplemented by study abroad, all resulting in the present work, which is an accurate, clearly written, and condensed exposition of the subject. The reader should be warned, however, that Professor Hobbs lays greater emphasis upon the above-mentioned "earth lineaments," or old fault lines, than all geologists would be willing to concede.

The book begins with an historical outline of theories, leading up to a discussion of causes, of which, naturally, earth-movements along faults are chief. The author passes in review the regions of most frequent shocks and discusses the nature of the movements and their effects upon topography and drainage-lines. Next he describes a number of great earthquakes, especially those within the United States. In this country he points out certain "danger-spots," so characterized because of intersecting "earth-lineaments." It is here that differences of opinion will arise, since the lineaments will appeal to some critics as ambiguous in significance or even as non-existent. The author also takes up methods of study and interpretation, both upon the ground and at a distance with instruments; and he somewhat illogically interrupts these closely connected themes in order to describe submarine effects. A discussion of the relations of shocks to disturbances of earth-magnetism and of gravity, closes the book proper, but several appendices contain scientific records. On the whole the book is a modern and readable presentation of a theme possessing more than ordinary interest.

Cassell & Co. have started a new series of hand books called The Complete Farmer. The first volume is "Soils: Their Natures and Management," by Primrose McConnell. This will be followed next by "Gardening for Women," by Frances Wolseley.

Prof. J. R. Angell's "Text Book of General Psychology" is to be issued by Henry Holt & Co., in thoroughly revised form.

"The Solar System; A Study of Recent Observations," by Charles Lane Poor, professor of astronomy in Columbia University, is a recent addition to Putnam's Science Series. The book may be recommended with confidence to the general reader. It is not too abstruse, is thoroughly entertaining, and is timely. We may note in passing that Professor Poor, without being overpositive or dogmatic, argues strongly against the recent theories about "canals" on Mars.

The Fitz-Patrick Lectures before the Royal College of Physicians of London, for 1905-06, have appeared with the imprint of the Clarendon Press (Henry Frowde), and the outer title, "Medicine in the British Isles." They were given by Dr. Norman Moore, known for his interest in the history of medicine and long engaged in gathering material for a history of St. Bartholomew's Hospital, whose early appearance is announced. The inner title, "History of the Study of Medicine in the British Isles," is somewhat misleading, since Dr. Moore does not attempt to show precisely how practitioners were trained. What he has done is to pick out various medical men of different periods, and to sketch partly their training and partly their methods as indicative of the general state of medical study in Great Britain at the time. The result is an exceedingly entertaining and instructive book, despite the somewhat rambling and unsystematic treatment. The author selects as his representative personages Mirfeld (about 1320-1400), Mayerne (1573-1655), Glisson (1597-1677), Sydenham (1624-1689), and Edward Browne (1644-1708), but this list of the preface gives no indication of the rich variety of information about persons and things to be found in the text. We note, for example, the ancient advice that hay slept on by "three poor travellers" (evidently forbears of the modern tramp) after suitable entertainment on Christmas eve will surely protect oxen against the epidemic of an entire year if placed between them from Christmas day to Twelfth day. In an appendix Dr. Moore prints various early charters witnessed by Grimbald or John of London, the Latin notes of Mayerne on the health of James I. (not before published), and on the health of Queen Henrietta Maria, and also the account of Harvey's notes on Galen, which he published some twenty years ago. The book has ten illustrations reproducing parts of old manuscripts concerning St. Bartholomew's Hospital, and other matters of medical interest.

"The Psychology and Pedagogy of Reading," by Edmund Burke Huey, is a volume of 469 pages, issued by the Macmillan Co. Since a writer usually looks forward with some dread to the criticism of those who claim to be experts in his subject, we cannot but admire the courage of one who, like our author, discusses an art in which each of his readers must necessarily be a skilled practitioner. But he who opens this book with a sense of self-confidence is likely to close it in a humble frame of mind, astonished to find how little he really knows about the art which he practises most constantly. The work is divided into four parts, dealing respectively with the Psychology of Reading, the History of Reading and of Reading Methods, the Pedagogy of Reading, and the Hygiene of Reading. In the part devoted to the Psychology of Reading the author appears as one of a group of investigators, many of whom are among the leading psychologists of the day. The results of their work are presented with few technicalities to trouble the reader, who cannot fail to feel that the serious study now devoted to the subject may soon lead to an immense improvement in our modes of acquisition of knowledge. The material for the remainder of the book, which gives fulness and symmetry to the treatment, is in large measure a record of the work and opinions of others. Expert teachers and printers will turn to the original works to which the author refers in a somewhat lengthy bibliography. But there is much in the book to interest others than the experts. We learn of "the work of the eye in reading" and of the danger of straining the delicate organ of sight. We are taught something of the mechanics of reading if we may so speak, and of the psychological processes involved, and are led to see that the current methods of teaching reading to the young are crude and unscientific. We have our attention drawn to the influence of the forms of letters, of their size, spacing, and other arrangement, in relation to ease of reading, and discover that many of the books we peruse seem cunningly devised to weary and distress us. We cannot expect pedagogical reforms unless teachers and the more intelligent of parents are awake to existing evils; nor can we look forward to advantageous changes in the making of books, unless pressure is brought to bear upon our publishers by an awakened public. For these reasons all who are interested in these reforms should welcome this work as an attractive study, which is likely to arouse a broader interest in the questions at issue.

Allen Vannérus, author of "Vetenskapssystematik" (Stockholm: Aktiebolaget Ljus), has in the last ten or fifteen years published a number of important philosophical treatises, among them a large "Kunskapslära," and several popular volumes written from the point of view of radical idealism. In his latest work he offers a comprehensive handbook of the classification of the sciences, and virtually a new system of classification, round which he has woven a survey of the scientific knowledge of our time, with estimates of the various sciences and of their relations to each other. For practical reasons the technical, or so-called applied sciences, are not included in the scheme, and the medical sciences are barely mentioned. The system that Dr. Vannérus outlines is eclectic, as he does not accept any one principle of classification throughout. An important part of the work is the historical introduction, in which the author, after a glance at the scientific conceptions of ancient times, reviews the various systems of classification. This part is of particular value because it supplements Flint's "History of the Classifications of the Sciences." The large number of Italian writers which Flint includes are omitted by Vannérus, who, on the other hand, treats fully of many important systems not mentioned by Flint, such as those of John Stuart Mill, Helmholtz, Dilthey, Windelband, Ostwald, and others. Taken in all, Dr. Vannérus's book is an important contribution to an important subject, and well deserves translation into English.

An international association for cancer research was formed in Berlin May 22. The objects are to promote the care of patients suffering from the disease, to collect and publish statistics, to establish an international centre of information on this subject, to publish an international technical organ, and to organize international conferences.

Prof. Leslie Alexander Lee of Bowdoin died May 20. He was born in Woodstock, Vt., in 1852, was graduated from St. Lawrence University at the age of twenty, and in 1876 became professor of biology and geology at Bowdoin. He was a member of several scientific expeditions, and was director of the Bowdoin College expedition to Labrador in 1891. He was author of various reports on scientific subjects.

Francis B. Forbes died in Boston May 21. He was born in 1840, and at a comparatively early age he went to China to engage in business. In the course of a long residence there he wrote a work on the flora of the country, for which he was elected a fellow of the Linnæan Society of Boston. He also made a collection of flora, now in the possession of the British Museum.

Drama.

Drama and Life. By A. B. Walkley, New York: Brentano's.

There is much entertaining and a considerable proportion of solid and instructive matter in this volume. It consists of revised dramatic reviews and essays taken from the London *Times* and two longer and more deliberate papers, the one on modern English and French drama and the other on selected French and English plays, which were printed originally in the Edinburgh *Review*. Mr. Walkley, as most readers know, has been for some years the dramatic critic of the *Times*, which, since his occupation of the post, has spoken with greater authority upon theatrical matters than it ever did before, at all events during the last four or five decades. In many respects he is extraordinarily well qualified for his task. He is not only a sound scholar, but a man of the world and a man of letters. He has an intimate acquaintance with the Continental theatre, ancient and modern, as well as the British, a retentive memory, a striking power of analysis, a keen sense of humor, and a fluent, vivacious, and—except for its occasional polyglottic excrescences—unaffected style. The fruits of his scholarship, his experience, and his wit are displayed liberally in these essays, which will give intellectual satisfaction to readers who care nothing for the traffic of the footlights. But ardent supporters of the theatre, who believe in its almost limitless potentiality as an engine of civilization, will regret that so competent a writer should, in his championship of the newer or newest drama, so often seem oblivious of the true significance of the old. In his admiration of realism and the theatre of ideas—whose great value within certain boundaries of taste and reason no one would dream of disputing—he apparently overlooks the fact that these are but single phases of a most comprehensive art, and that the representation of them demands the exercise of but few of the faculties—and those but seldom the highest—which form the equipment of the true actor. The vital question to-day is whether the literary, romantic, imaginative, heroic, historical, and inspirational functions of the theatre are to be abandoned as worthless or not. They will assuredly vanish—they have almost reached the vanishing point already—unless actors can be provided to interpret them with proper effect.

The misfortune is that Mr. Walkley does not write as if he regarded the theatre as a serious institution, with infinite possibilities for good or evil in its social effects. He can praise or ridicule, but he never protests. He is instant in the castigation of ignorance or stupidity, in appreciation of cleverness, apt characterization, or thrilling situation. In swiftness of comprehension and clearness of description he is almost wholly admirable. In sketching the synopsis of a plot he puts his finger on the salient points with most illuminative accuracy. Sometimes he seems to see the drift of an argument more clearly than the author. Nothing could be better than his sympathetic reviews of "The Admirable Crichton" and "Peter Pan." He reads the heart of Barrie's mystery. His appreciation of Sir Henry Irving, after the funeral services in Westminster Abbey, is brief, but thoroughly fine and sufficient. His criticisms of actors constantly carry the conviction of the nicest discrimination and judicial truth. He says, for instance, of the Hamlet of the younger Irving, that it was a little hard, a little too elaborately emphatic, but distinctly intellectual and original. But he is only dimly aware of the power and vast imaginative scope of Thomas Hardy's, "The Dynasts," which he maintains might be acted on the stage, by the skilful use of puppets. This attitude, perhaps, is explained by his contention, elsewhere, that the imagination in the study, cannot realize the vividness of stage representation. Herein he betrays the shortsightedness of the realist. But, on the other hand, in another paper, he demonstrates with unanswerable logic, the inartistic vulgarity of the dramas of mere curiosity or horror, which are the most prominent articles in the stock in trade of realism. With all his brilliancy Mr. Walkley is not always consistent.

As a rule, his judgment of modern plays and playwrights is sound in argument and discrimination, but occasionally it provokes exceptions. One may be taken, certainly, to his high estimate of Pinero's "Iris," which Mr. Walkley pronounces "solid, living, throbbing drama," whereas few pieces bear more internal evidence of cunning theatrical calculation. But he recognizes the artificiality of the dialogue, and makes it the subject of a capital little essay on literary conversation. It is rather startling to note his inclusion of Bernard Shaw among the "thinkers" of the day, but it is only fair to add that he also compares some of Mr. Shaw's deliverances to the madness of March hares. A more serious matter is his condonation, if not positive approval, of Beerbohm Tree's offences against Shakespeare in his remorseless mutilations of the text in the interests of spectacle. It is true that Mr. Tree, having no company capable of doing bare justice to the text, could not hope to make Shakespeare pay expenses in any other way, but it is plain that such a policy can only lead to the utter extinction of the old poetic drama, so far as the stage is concerned. Mr. Walkley seems to hold that the application of modern methods to these ancient masterpieces is only a step in the process of evolution, and that the rhetorical theatre, which was the product of the open-air platform stage, could not hope to survive long in the modern theatre, to which it is ill-adapted. This theory would be more plausible if the poetic drama had never prospered upon the enclosed stage. But the point need not be argued now. One thing is certain, and that is that, with the practical disappearance of the rhetorical drama, the theatre has grown narrower in its aims, and feebler in its achievements. Mr. Walkley does not realize this, and, considering his authority and influence, it is a pity.

Smith & Elder, of London, have brought out a newly revised and cheaper edition of Sidney Lee's "Life of William Shakespeare." All the illustrations are carried over from the more expensive issue.

A. W. Pinero's play, "The Thunderbolt," recently produced in the St. James's Theatre, London, secures, as might have been expected, a liberal measure of praise from the writers of the daily press; but, mingled with the laudation, there is to be discerned an occasional note of disappointment. Plainly, the piece is more remarkable for its technical excellences and its general theatrical effectiveness, than for the value or novelty of its theme; any definite purpose in its inception—beyond the creation of suspense or excitement—or any tonic intellectual or spiritual effect in its treatment. Reduced to its skeleton, the tale is sordid in quality, and trite in detail, but the cheapness of the original material is skilfully disguised by the cleverness of the decorative workmanship.

The death is reported from Berlin of Adolf L'Arronge, the dramatist and theatrical manager. He was born in Berlin in 1838, and after studying music became the conductor of an orchestra. About 1870, however, he began writing plays, and soon he became very successful in depicting the life of middle-class Germans. He was active in the founding and management of the Deutsches Theater in Berlin. Among his plays are: "Das grosse Los," "Mein Leopold," "Hasemanns Töchter," "Dr. Klaus," "Wohltätige Frauen," "Haus Loney," "Kompagnon," "Sorglosen," "Heimchen," "Der Weg zum Herzen," "Loreley," "Die Verkannten," "Lolos Vater," "Pastor Brose," "Annas Traum." "Mutter Thiele," "Der Wohltäter," "Sanatorium Siebenberg," "Über Nacht," and "Das letzte Bonbon." He also wrote "Deutsches Theater und Deutsche Schauspielkunst."

Music.

Harmony and Ear Training. By William Alfred White. New York: Silver, Burdett & Co. $1.50.

Thirty Preludes for the Organ. Edited by H. Clough-Leighter. Boston: Oliver Ditson Co.

An encouraging aspect of many new books on the theory and practice of music is the growing hostility to the pedantry and impracticability of traditional methods. Mr. White's book is a conspicuous example of this tendency. The author has endeavored, and with success, to provide a book in which systematic studies in ear training are connected organically with a thorough course in harmony. He is professor in the theory and practice of teaching music at Syracuse University, and offers his novel suggestions as a result of many years' experience in the classroom. He applies himself to the study of the music itself, instead of musical theories, and he records remarkable results in the perceptional development of hearing. While this is a book for students, even the general reader who loves to think about music as well as to hear it will be interested in Chapter xv., wherein the author discourses on tone color, in the development of appreciation. He does not profess to be able to explain why the C major chord is so commonplace and characterless as compared with that of F sharp, which has character, tone-color, rich mellowness, and brilliancy combined; but he goes through the whole circle of keys and notes their qualities. Perhaps he goes too far in asserting that differences in the various keys are as marked as the different odors of beautiful flowers; but it is certainly true that the pleasures of musicianship are largely a result of the subtle sensibility to exquisite nuances in tone-color.

Tone-color, in the larger sense of the word, including not only key-differences, but qualities of different instruments and organ pipes and their combinations, has become so important an element in modern music that organists are increasingly estimated by their skill in selecting and commingling them. In the collection of organ preludes made and marked by H. Clough-Leighter, there is perhaps a little too much of the older style of "diapasons and oboe" registration. The diapasons are fundamental, of course, but they are colorless. The voix céleste and vox humana are to the color scheme of the modern organ what the strings are to the orchestra, and are therefore indispensable. The editor has shown excellent taste and judgment in his selections; the list includes not only standard organ pieces, but transcriptions of preludes by Chopin, Gounod, Wagner, and others that sound well on the organ. He has had the courage to include the Ave Maria written by Gounod on the first Bach prelude, which has received more abuse than it deserves. The introduction includes a disquisition on the word Prelude, and brief biographic sketches of the composers represented in the collection.

The publication on the occasion of her eighty-ninth birthday (May 27) of an "Album of Fourteen Songs, Original Poems, and other Verse Music," by Julia Ward Howe, will come as a surprise to many of our readers. Mrs. Howe has not been known as a composer of music. Through a long life of beneficent activity, her fine musical abilities have been kept in the background. A special poem is contributed to the work by Thomas Wentworth Higginson.

Oscar George Theodore Sonneck, who is chief of the division of music in the Library of Congress, and whose "Early Concert-Life in America" is a model of scholarly research, has lately compiled two catalogues (Government Printing Office) which have a value and interest even to those who cannot have access to the Washington library. One is "Dramatic Music: Catalogue of Full Scores," which shows a remarkable zeal in the acquisition of full operatic scores since 1902, when the library had only about sixty of them. The other is a grouping of the musical compositions and literature (largely educational) that have been gathered together. On March 31 of the present year the Library of Congress possessed a collection of about 375,000 volumes and pieces of music, 5,000 books and pamphlets of the literature of music, and 6,000 books, pieces, etc., of musical theory and instruction.

Julius Hainauer of Breslau has published an arrangement for violin and piano, by Arthur Hartmann, of the Cradle Song and Concert Study from MacDowell's opus 24. These pieces will be welcomed by those who regret that MacDowell wrote so little chamber music.

Rubinstein once wrote that to him Bach seemed incomparably higher than Handel because "more earnest, more genial, more profound, more inventive, more incommensurable." The world is gradually coming to share this opinion. Bach's choral works are indisputably the grandest in existence, yet when a choral society was organized in Boston, in 1815, it was called the "Handel and Haydn Society," and it was not till 1871 that Bach was adequately represented on the programmes by selections from his "Passion according to St. Matthew." In England, owing to the Handel monopoly, the Bach cult was equally slow in developing; but to-day it is one of the conspicuous phenomena in the musical world on both sides of the ocean. The London *Musical World* in its last number points with pride to the fact that the greatest of Bach's works, the B minor mass, was sung nine times in the United Kingdom within four months. This same mass was the principal feature of the Fourth Bach Festival held at Montclair, N. J., last week. Frank Taft had gathered a chorus of 135 singers, an orchestra of 40, and capable soloists. The performance was held in the First Congregational Church, and its results indicated that Montclair has now taken the place of Bethlehem, Pa., which gave Bach performances that attracted music lovers from all over the country until Professor Wolle went to California.

The heirs of Donizetti are still fighting for their rights—or copyrights—in Paris. Two years ago they sued the Opéra, the Opéra Comique, and the Société des Auteurs Dramatiques for royalties. A recent decision of the courts is in their favor. It is decided that four of the Donizetti operas—"La Favorita," "The Daughter of the Regiment," "Don Pasquale," and "Lucia"—are still subject to royalty, and the heirs expect to receive about $160,000.

Art.

THE PARIS SALONS.

PARIS, May 8.

Nothing could better explain the character of this year's salons than the fact that the great success is Jean Veber's La Guinguette, shown in the New Salon. It attracts the public; it amuses artists; it occupies the critics; it is destined for the Hôtel de Ville, according to the catalogue, in which it is described as a decorative panel. At first, this success seems almost unaccountable. The picture is nothing more than a huge version of paintings the artist has shown before, representing a resort where Paris takes its holidays, and filled with the detail that has won for Veber the name of the modern Brueghel. In front of a little inn people are eating, drinking, dancing, painting, swinging, sleeping, talking, making love, being photographed. Cyclists arrive, a motor is at the gate. In a word, it is the modern holiday crowd, but rendered in a spirit of broad and bitter satire. As a caricature you can understand the picture; scarcely, however, as a decoration. True, if you stand a little way off you will find that the tiny figures, so out of proportion to the size of the canvas, are not placed at random, but arrange themselves into lines leading up to the distance where Paris stretches vaguely toward the horizon; and that the composition is framed by the trees on either side of the foreground. Even then the color is not pleasant, while it is evident that the artist did not elaborate his detail merely for the sake of an arrangement of lines; he meant you to look at it carefully, to study it out, to lose nothing of its fun and cruelty. Then you remember the great designs that used to hold your attention at the New Salon—the Ste. Geneviève watching over Paris, the stately muses trailing their draperies through the dim lotus lands of Puvis de Chavannes, or the seas and clouds and shores radiant in the light that never shone save in Besnard's canvases at their very best; and you wonder the more that the laurels of these masters should now have fallen to Veber. But as you wonder, you laugh and are interested, despite yourself. There is a humor, a zest, a vivacity, a truth, in the expression and action of the little figures, and in their grouping, that is quite irresistible. They are exaggerated, distorted, but they show keen and often illuminating observation, as well as originality of conception and treatment. And here you have the reason of Veber's success: he is not afraid to be himself, nor to see things and put them down in his own way. Therefore his work abounds in the life, the vitality that always tells, whatever the artist's subjects and methods.

There are only too many other enormous decorative panels in both salons, the larger number on a far more colossal scale than Veber's. They are marked, as a rule, by a greater ability than his to cover a vast expanse of canvas, and by a more profound knowledge of the decorative value of masses and lines. But they are without the life he knows how to give to his most fantastic and absurd parodies. The painters are accomplished, but they originate nothing, basing style and observation both on long accepted conventions. The skill is immense, and so is the energy, in a performance like Detaille's Chant de Départ, the song of the soldiers on their way to battle, Victory—or whatever the allegorical figure may be—leading them on; or like Jean-Paul Laurens's La Musique, a gigantic tribute to Beethoven. But the machinery—it is admirable machinery—creaks and you would rather have it turn out something less correct if it gave you in exchange one touch of genuine emotion or personal observation. Even Henri Martin's method, while it smells less of the schools, has grown into a convention. Certainly, this year, his subject, L'Étude, a large panel for the Sorbonne, has not inspired him. His sowers and reapers were more picturesque, as he saw them, than the students who now wander and group themselves in the same sunlit groves and meadows.

Detaille, Laurens, Henri Martin have always remained in the Old Salon. In the New, though there is not so much as there once was to choose between the two exhibitions, a few of the big decorative panels strike you as something more than mere variations upon well-worn motives. There is a distinct freshness in Maurice Denis's L'Éternel Printemps, a series of panels—cool, white visions of gardens where fruit trees are forever in flower, and grass is forever strewn with blossoms, and maidens forever move in languid dances or pose in listless unconcern. In their languor they recall the old motionless Madonnas of the early Italians and Flemings, and the whole design is carried out with a deliberate assumption of primitiveness, based, however, on the knowledge of the modern painter. The simplicity of the drawing and the naïveté of the figures give the repose that is the first essential of successful decoration, if almost the last thing now considered by the decorator. As different as possible is the work of M. Caro-Delvaille who also has executed a large panel, Le Paon Blanc. M. Delvaille never strays into imaginary gardens of Eden, but keeps scrupulously to the world he knows, and is as realistic in his presentation of it as in his vision. Here is no assumption, no adaptation of primitiveness, but an altogether modern grouping of men and women of to-day on a high terrace, round a long table, where the cloth is spread in an altogether modern fashion. Behind, a row of windows open out upon the terrace; in front, wide steps descend into a garden. On these steps, the peacock that gives the panel its title stands, spreading out the splendor of its tail, the color and the line, too, repeated in the trailing skirts of a lady at its side. The arrangement is ingenious, and the color has charm. But, in this instance, repose has been sought by the sacrifice of all semblance of life in the figures.

In France, artists themselves are keenly conscious of the period of degeneracy, or decadence, as they call it, through which they are passing. The change is most evident in the New Salon, so brilliant in the beginning. Of the older men who are left, Besnard does not exhibit, and few show work they have not surpassed in previous exhibitions. M. Boldini is one of the exceptions. His two portraits—both of women, one a full-length in gorgeous black satin, the other a half-length, all delicate grays—have the style and distinction he gives to every canvas, and are simpler in pose and costume than some of his recent portraits, which, in their exaggeration, were like amazing caricatures of fashion plates. On the other hand, they appear to me to suggest less the character of the individual, which he can, when he chooses, render so astonishingly as in his Montesquiou or his Whistler, than the character of a type—the woman of fashion. Like Van Dyck when he painted the ladies of the court, Boldini has evolved a formula by which to render the faces and, above all, the hands, the gorgeous silks, and jewels of his sitters. It is, however, his own formula, and, though many have attempted to appropriate it, he is still unrivalled in the way he can, with a sweep of his brush, give a fold of the draperies, a long tapering finger of the slim hand, the waves of the hair.

Formula, too, though of another kind, threatens M. Zuloaga, able and daring as he is. His backgrounds, for which he was once wise enough to study Velesquez, grow murkier and murkier, a foil for the vivid burst of color made by the shawls and dresses of the Spanish women whom he delights to paint. This year, it is Mademoiselle Lucienne Bréval, as she will, or should, look in the second act of "Carmen," who figures on his canvas, and she is arranged, not in the conventional properties of the operatic wardrobe, but in the costume worn by the real Carmens in Spain. Her red gown trails below the most flamboyant shawl that, surely, even a Spaniard ever wore, and the pattern is worked out with marvellous elaboration. There is none of the delicacy the old Dutchmen brought to the most intricate detail; and Zuloaga has no respect for surface; his technique is coarse, almost brutal. But, like Veber, he puts life into his work. Nor does his interest cease with the costume; the woman who wears it is very real flesh and blood, with all the fire and passion of Carmen in her face. His other two canvases have little to redeem the murky color and coarse technique. Zuloaga seems always to be forcing up his effects to exhibition pitch, which is the less necessary because he is the strongest of the Spanish group now so prominent in both Salons, with the exception perhaps of Anglada, who, unfortunately, is not represented this spring.

Many exhibitors in the New Salon make their bid for notice, not by violence, but by affectation of technique. In one way, they succeed. You simply must look at Flandrin, who blocks out figures and foliage in curious flat, square, masses, making no endeavor even to indicate the planes in a face, or in a bit of drapery, or in a landscape; you must look at Minartz, to whom realism appears to mean grotesqueness, as it meant grossness to Zola; and at Truchet, who is so blinded by sunlight that, in his eyes, flesh seen *en plein air* is turned to leather. But it is the more useless to call attention to work of this kind when I have not space to speak of all the good work, which is still to be found. There are pictures, like those of Louis Legrand and Hochard, where the merit is in the masterly study of character and the accomplished drawing. M. le Sidaner must be noticed because of his new departure, provincial France and Venice, as subjects, exchanged for London, but not with unqualified success. On his canvas Trafalgar Square looks like part of the garden of some old French château, and it is far too fine in its own way to borrow picturesqueness that does not belong to it; and if, in painting St. Paul's from the other side of the Thames, Le Sidaner has seen, as so few painters of London have, the delicate rose and white which the London atmosphere sometimes gives to the grimiest, dirtiest city in the world, he has not been able to express the delicacy of color quite adequately, nor yet to show the wonderful dome in all its might and majesty as it rises above the tall warehouses.

Again this year, as last, I find the two strongest features of the two salons to be the work of Spaniards and Americans. Of the Spaniards I have already spoken. It is extraordinary that, violent as their painting is, it tells far less in these vast caravansaries of pictures than the painting of Americans who seek their effects by refinement both of tone and technique. I referred to this refinement in the American group when I wrote of the salons a year ago, and I am now as impressed with it as I was then. I take it to be the healthiest sign in modern art as represented in the big Paris shows. For the great evil of the modern exhibition is that it has led artists, in their struggle for success, to accept only the exhibition standard and to think it necessary, as I have just said of Zuloaga, to work up to exhibition pitch. But those of our younger artists who now exhibit in Paris have escaped the evil and have based their art chiefly on the teaching of the greatest American of all—that the pictorial appearance of Nature should be respected, that figures should keep well within their frames and remain in the light and atmosphere where the artist found them. Perhaps the best example at the Old Salon is the work of Mr. Vonnoh, whose Bessie Potter Vonnoh is a proof that the endeavor to obtain harmony of tone need not interfere with a painter's careful study of beautiful detail, and whose small head of a man is a proof that it need not prevent his sympathetic study of character. Perhaps the best example in the New Salon is the work of Mr. Barlow, whose subjects scarcely vary—three or four figures of women in a simple interior, that is all—but who creates a new harmony from each new variation of the same theme. Charles Warren Eaton, whose landscapes are full of feeling; Mr. Frieseke, who at times loses his grip on his figures in his pre-occupation with his design as a whole; Richard Miller, who, however, strikes a louder key; Mr. MacCameron, who is somewhat weighted by the sensationalism of his subject, three absinthe drinkers; James R. Hopkins; Miss Lucretia Spielmann; George C. Aid; are among others of the group who aim above all at arrangement and atmospheric truth.

The sculpture is, as usual, overwhelming in quantity and in its average of excellence. It is out of the question to go into detail, and all I can dwell on here are the three contributions of M. Rodin: Orphée, Triton et Néréide, and the Muse. They are all three in the unfinished, the fragmentary, stage in which, evidently, Rodin now prefers to exhibit his work—a preference many think a mistake. There is, however, passion already in the Orphée in its incompleteness, and there are vigorous passages in the Triton et Néréide. But it is the Muse that is of special interest, the sketch, it is said, for the symbolic figure in Rodin's design for the Whistler memorial. The figure, as he shows it, is armless, and it is nude, though, eventually, there is to be drapery. Therefore, the pose does not explain itself so logically as it no doubt will when the design is completed. From a certain point of view, the lines are awkward; but the drapery will make all the difference. From every other point of view the effect is one of great stateliness and dignity, while, unfinished sketch as it is, the figure, cast in heroic mould, has a solemnity, an impressiveness, I have never seen equalled in any of Rodin's previous work; and in the face there is a simple grandeur that is unrivalled anywhere, unless it be in the figures brooding over the tombs of the Medici in San Lorenzo.

When it comes to the drawings and the prints, one still feels the dulness that, during the last few years, has fallen upon the section that was once the most interesting and stimulating. One thing it is a pleasure to note is the special honor paid to M. Lepère, at the New Salon, where he holds an exhibition apart in one of the smaller rooms. Timothy Cole and Mr. Wolf are in the Old Salon, Mr. Cole showing some of his reproductions of the French masters, Mr. Wolf his copies of Ver Meer and of Sargent's portrait of Mr. Pulitzer. Among etchers, are the Americans, Mr. Pennell and Mr. Webster. Of other prints, none need be mentioned except the lithographs of M. Belleroche, M. Léandre, and M. Dillon.

N. N.

Lewis F. Day, author of "Enamelling" (imported by Charles Scribner's Sons), is not an enameller, but he is well acquainted with men who are. He is familiar with the historical researches of Von Falke, Kondakow, and other Europeans who have not been content, like many of the Anglo-Saxon writers on ceramic and metallurgical subjects, simply to borrow statements and misstatements from each other. Above all, he has convictions, a point of view from which he regards all fine art; and he knows how to write. In this book he has produced a model work of its kind. It is hard reading in places, because it treats of a highly technical subject, but it nowhere goes beyond the comprehension or interest of an intelligent person who understands the elementary practices of metal working. An enamel, in Mr. Day's discussion, means a coating of vitreous color fused upon metal; and strict adherence to this definition marks the entire discussion. The striking illustrations, some of them pen drawings, others half-tones, ought certainly to be in the hands of all American metal workers who have not ready access to important enamel collections at a museum.

"Stained Glass Tours in France," by C. H. Sherrill (John Lane Co.), offers holiday-makers a highly specialized form of entertainment in well-devised trips, which present the development of this branch of French art in three periods or groups, as illustrated chiefly in churches north of Limoges. In system and accuracy of treatment the volume renders capital service as an introduction to the subject. Even so little visited (though accessible) a chapel as that at Champigny-sur-Veude obtains due appreciation of its interesting examples. Concentration on such a hobby naturally tends to present France as a "stained-glass museum," without inhabitants; indeed, it is in Brittany alone that the author seems to become conscious of a population.

"Safe Building Construction," by Louis de Coppet Bergh (The Macmillan Co.), a book written by an architect of long experience, is practically a treatise on engineering, dealing especially with those problems which the architect is called upon to solve. Its simple rules for "those who do not understand trigonometry," its diagrammatic illustrations, and its pages of tables will be attractive to many an architect and builder. Whether it is thoroughly sound in detail can only be judged by the technically trained expert after close study of its closely printed pages.

"Modern Baths and Bath Houses" (John Wiley & Sons), written by a sanitary engineer of long experience, William Paul Gerhard, cannot but be valuable to those interested in the subject treated, and especially to architects who are called upon to design bath-house structures.

A "Handbook of the Germanic Museum of Harvard University," prepared by the curator, Prof. Kuno Francke, has been published by the university. This useful booklet will indicate in a striking way, to those who have not had the good fortune to visit this museum, how much has been accomplished by the energy and devotion of Professor Francke and other friends of Germanic studies in bringing together in so short a time this unique collection. But for this energy and devotion, the German Emperor would hardly have been moved to present the remarkable series of casts, illustrative of German architecture and sculpture of the middle ages and the Renaissance, which forms the kernel of the collection. Short as the handbook is, it is something more than a mere guide to the museum. It indicates the character of the artistic movement which each object illustrates; and each of the important works of art represented by the casts is described and analyzed. The main portion of the book, devoted to the monumental German sculpture of the middle ages and the Renaissance, is thus of value as a work of reference on German art. The photographic illustrations of objects in the museum add to this value; but the illustrations would have been more useful—especially for the reader who is not visiting the museum—if titles had been printed under them. The collection of reproductions of German metal-work from the twelfth to the eighteenth century is more briefly treated. References to important authorities are given in footnotes. The pamphlet closes with the statement: "Even now this museum contains a larger and more methodically selected number of reproductions of objects illustrating the history of Teutonic civilization than any other university museum, either in America or Europe"; and points to the necessity for a larger building to house the growing collection which even now "requires for proper housing and arrangement a building three times the size of the present one." According to the "foreword" more than 100,000 persons have so far visited the museum.

The national Freie Lehrervereinigung für Kunstpflege, which through the house of J. Scholz, Mainz, has been publishing some excellent reproductions of the works of artists, old and modern, now brings out some of the works of Fritz von Uhde, not the well-known Biblical pictures, but scenes taken from daily life. There is an introduction by A. Troll.

In the series known as Hiersemanns kunstgeschichtliche Monographien, Dr. Johannes Sievers has published as a ninth volume a work on Pieter Aertsen. He shows particularly that Aertsen was inspired by southern influences and ideals. The author has travelled all over Europe in search of Aertsen pictures, and furnishes an exhaustive catalogue, which is really the backbone of this work.

In a lecture at University College, London, May 14, Prof. W. Flinders Petrie gave an account of his first season's work in the ruins of Memphis. In the great Temple of Ptah were discovered a number of votive tablets on which ears are carved. Hitherto the ears, modelled in clay or carved in relief on stone, found throughout Egypt, have been classed with the similar small objects found in other parts of the ancient world. For instance, David G. Hogarth unearthed in the Temple of Diana of Ephesus numerous eyes, hands, ears, and occasionally a leg—evidently thank offerings or petitions for cure. But the fact that in Egypt only ears were found and other parts of the body were missing, suggests another explanation. On some of the Memphis tablets there is one ear only, on others many ears, without an inscription. In one case the tablet is covered over with roughly incised outlines of a multitude of miniature ears. But on others there is the explanatory inscription: "Listen, O Ptah!" or "Ptah, listen to the petition made by such an one." It is probable that the ears were not those of the worshipper, but extra ears intended for the god. One rather delicately carved tablet strengthens this theory. On one side is the kneeling figure of the suppliant, with his name and inscription, and on the other side the standing figure of the god Ptah, who, besides his ordinary ears, has two enormous supplementary ears carved one on each side of his head. In Memphis also were obtained some little terra-cotta grotesques. Three of them are clearly East Indian figures, and in one the face is well enough marked to be recognized as a type from Orissa. There are also a head of the Persian King; a mounted Scythian horseman, which suggests a date soon after the invasion of Cambyses; a Persian warrior with a lion's skin and lion's claw on his cap; and a Bedouin Arab, uncommonly like a modern inhabitant of a Polish Ghetto. Excavations were also undertaken on the site of the city of Athribis in Upper Egypt. The ruins of a temple were found there with carvings dating from 60 B. C. to 120 A. D. One of the most interesting discoveries was a chamber containing carvings of trees and inscriptions, recording an expedition to Punt, the land of incense at the south of the Red Sea. The western side of the temple was in a good state of preservation, and the explorers dug deep enough to reveal a portion of the great doorway. Two miles to the south of Athribis the excavators came upon a cliff, 600 feet high, which was honeycombed with tombs. Among these were five painted and inscribed tombs belonging to the fourth and fifth dynasties.

The excavations carried on at Olympia, near the great temple of Zeus, under the superintendence of Professor Dörpfeld, have resulted in the discovery of remains of the neolithic period, including house-vessels and implements. From this it is evident that the site of Olympia was a place of human habitation even before the bronze age.

Recent excavations beneath the Church of St. Crisogono in Trastevere, Rome, have uncovered the walls of an apse of Constantinian date. The original decorative paintings are in a fair state of preservation. Besides these there have been found, outside the original altar screen, the figures of three saints, apparently of eighth century date, and extraordinarily fresh in color. The excavation will be continued into the nave of the old basilica, and there seems good hope that remains of early painting fairly rivalling those of Sta. Maria Antiqua and S. Clemente may be brought to light.

From Jacques Reich we have received an excellent etching of Andrew Jackson, after the painting by Thomas Sully. The size, 14¼ by 10¾ inches, is convenient for framing.

Among the exhibitions at the dealers' galleries in this city are etchings in colors at Edward Brandus's, till June 1; early American art at Ehrich's, June 14; and etchings by American artists at Frederick Keppel's, June 20.

The collection of modern pictures and water-color drawings made by the late Stephen G. Holland of London is to be sold at Christie's on June 25, 26, and 29. It is rich in Turner drawings, among them being the Hastings, which in 1881 sold for $5,522; the Heidelberg with Rainbow, Saltash, and The Diligence. In oils Turner is represented by Mortlake Terrace (1827), for which $27,300 was paid in 1895; The Storm, and The Morning After the Storm, which he painted in 1840. The principal Constable is the Salisbury Cathedral, painted from the grounds of the palace in 1826 because the bishop who ordered it did not appreciate the earlier one, now in the South Kensington Museum, and conceded to be one of Constable's most perfect pictures. Gainsborough, as a landscapist, is represented in The Harvest Wagon. Among the Continental pictures are two very fine Jacqueses, Woody Pasture, with the inevitable flock of sheep in a Diaz-like forest, and Watering the Flock; Diaz's The Bathers, two Daubignys, two Troyons, a Van Marcke, and two Corots.

At an auction at Christie's, London, May 8, the following pictures were sold: Raeburn, Alexander Allan, £367; Mrs. Allan and Child, £367; Romney, Mrs. Maria Hughes, £336; Hoppner, Portrait of a Young Gentleman, £283.

Emil Neide, an artist of the Munich school, has died at the age of sixty-four. Among his best known pictures are Die Lebensmüden, Am Ort der Tat, Vitriol, Orpheus and Eurydice.

Vol. I. From the Beginnings to the Cycles of Romance.

One of the many favorable comments on Vol. I.:

"Lucidity and conciseness of statement are conspicuously linked in this book with exact knowledge, the sense of proportion, and critical insight. Altogether, The Cambridge History of English Literature' has made an excellent beginning, and promises in its completed form to be one of the most valuable works of reference in the language."—Standard.

The Nation.

NEW YORK, THURSDAY, JUNE 4, 1908.

The Week.

Congress has well deserved the epithet, prophetically applied to it in advance by its own leaders, of a "do-nothing Congress." This is not necessarily a reproach. It may be, on the contrary, high praise. There are times when doing nothing is vastly better than the "do-something" policy. Lord Cromer remarks that statesmen and legislators are never so dangerous as when yielding to the cry that they "must do something." The chances are that they will do something wrong. And there are certain aspects of the determination of this Congress to do nothing which appear highly commendable. That it persisted in such a course in spite of the alternate buffetings and beseechings of the President, heightens the credit of the performance. If the plan of "we must do something" had been applied to the project for four battleships, for ship-subsidies, for modified writs of injunction, and for amendments to the Sherman act, we should have a muddle of legislation out of which it would take years to dig ourselves. In a time cursed by too much and too raw legislation, few will blame Congress for refusing to add to its volume. The worst thing to be said of the session is that it has been inexcusably extravagant. Lavish appropriations are always to be condemned; in a year when the money to pay the bills is not in sight, they come near constituting a legislative crime. The Republican leaders were dimly conscious of this, and struggled feebly against the spendthrift policy. But a bad system of financial control, with the acquired momentum of an era of extravagance, was too much for them. They strove against the stream but strove in vain. Now it will be their duty to go before a people who have been pinching and economizing, and defend as best they can the voting away of the largest sums of public money ever known. The most plausible apology which they may be able to make will not, in effect, be very different from the excuse of the Irishman who proposed to feed a hungry dog with joints cut off his own tail! The utter failure of Congress to be frugal, if it could not actually retrench, may be a real issue in the campaign. Senator Culberson seems to think so, from his deliberate biting in of the facts last Friday. It is possible that a people wrestling with prolonged business depression may be angry with a Congress that squandered public money, and may make the anger felt politically. But apart from that possibility, we think there is little in the record of Congress to excite popular emotion, one way or another.

In the compromise currency bill, as finally passed, the one vital and workable provision is that of the Senate measure, against which intelligent banking opinion and intelligent economic opinion unanimously protested. Mr. Vreeland's clumsy machinery of "national currency associations," whereby ten banks in a given territory may unite to authorize emergency banknotes based on general assets, is included. But these groups of banks, after passing officially on the application of a member, must apply to the Comptroller of the Currency, who must apply to the Secretary of the Treasury, who must examine the collateral and decide if it is sufficient. When his assent has been transmitted, through the same channels, the bank may obtain new circulation up to 75 per cent. of the cash value of the deposited assets (within 30 per cent. of its capital and surplus), and all banks in the group become jointly and severally liable for redemption of the notes. This process insures delay, and, taken along with the progressive tax of 5 to 10 per cent. on outstanding "emergency currency," would scarcely predispose a bank to adopt the Vreeland scheme. The Aldrich section of the bill, on the other hand, allows any national bank to apply directly to the Comptroller for such currency on the basis of State, city, town, or county bonds, and authorizes it to take out notes up to 90 per cent. of the market value of such securities. Plainly, therefore, such inducement is offered for use of the Aldrich bill's provision as to render any alternative recourse improbable. This shows to what extent the House conferrees swallowed their scruples at the behest of the experienced intriguers of the Senate, and makes a sufficiently interesting anti-climax to the hearings of the House Banking and Currency Committee, and to the assurances of the House conferees, and the Republican representatives in general, that the one thing they would never do was to accept the Aldrich bill.

At the currency commission clauses, and the appointments made in accordance with them, the Senate clique may indulge in ironical laughter. The Senate's delegation on the commission is made up from the Senate Finance Committee, where the Aldrich bill was drafted. From the House, Speaker Cannon named the three conferrees who assented to the compromise bill, and a group of miscellaneous representatives carefully selected, save in one instance, so as to shut out the members of the regular Banking and Currency Committee. There are, of course, no outside experts; Aldrich is chairman and Vreeland vice-chairman. The predisposition of a body thus constituted is not particularly doubtful. The New York Chamber of Commerce, the numerous trade organizations, and the House of Representatives, had not only called for a commission one-third of which should be outsiders, but had stipulated that the commission, after public hearings, should submit its report before the close of 1908. The bill as passed directs that it "report to Congress at the earliest date practicable." The only obvious comment on this outcome is that it represents a notable victory for the Aldrich cabal and the interests which stood behind it, and a notable defeat for the chambers of commerce, the banking organizations, and the believers in currency reform.

Every one must be pleased to learn that President Roosevelt has been constructing the platform which his party is to adopt at Chicago. These things ought not to be left to chance or the occasion. And there is obvious propriety in permitting the man who has forced a candidate upon his party to frame the platform upon which that candidate is to stand. Furthermore, the gathering of the platform-makers at the White House insures just the right touch of awe and adulation in the resolutions endorsing the Administration which raised the country to a new pitch, etc., has given a glorious example, and so on, to which we pledge ourselves and so forth. If some hypercritical person objects that Mr. Roosevelt is undertaking too minute a management of the Chicago Convention, the reply is that he will permit it to appoint its own doorkeepers and notification committee. There is a familiar story that once, when an alarmed Democrat went to Dean Richmond to point out that his "slate" did not include the nomination of some minor official, the boss pondered for a moment and then said magnanimously, "I'll leave that to the Convention."

Concerning the dignity and importance of the Office of Vice-President of the United States we have had, repeatedly of late, the following somewhat incoherent apologia: It is a great office which is unjustly depreciated, which any man should be proud to fill, and for which, consequently, there is no more fitting candidate than Mr. John Smith of Homesdale, whom no one has ever heard of. Vindication of the Vice-Presidency is as hardy a political annual as acknowledgment of the necessity of a revision of the tariff by its friends, or

Mr. Bryan's readiness to step out in favor of another candidate. It would be interesting to see what a really strong Vice-President, coupled with a somewhat less strong Chief Executive, could do in the way of building the flesh of authority about the skeleton of mere office. Fate decreed that Mr. Roosevelt as Vice-President should have no chance to develop the latent possibilities of the office. Had he been left a little longer in the Vice-Presidency, the position would have come to its own.

The battleship fleet is expected to resume its journey, after the beginning of the fiscal year 1908-1909 with the new appropriations for coal. It is a question, however, whether at least eight of the ships should not remain permanently on the Pacific Coast. One of the many reasons given for the cruise was the desire to put an end to the dread of a sudden Japanese raid on San Francisco or some other Pacific city. But since the Pacific Coast has shown sensitiveness and a desire for a stronger naval force, it might be a wise policy to increase the Pacific fleet so that there could be no recurrence of the alarms. When Rear-Admiral Evans's ships arrived at San Diego, the Pacific fleet, which is under the command of Rear-Admiral Dayton, had on the West coast thirteen ships. Of these eight are our finest armored cruisers of high speed and power, next in strength to our battleships; four are modern protected cruisers, and one is a gunboat. With the addition of torpedo boats and destroyers, there would be available for duty a very respectable fleet of all branches of the service—considerably more powerful in battleships and heavy cruisers than our entire strength on the Atlantic on March 1, 1898, just before the war with Spain. Moreover, there are now out of commission or under repairs in various Pacific Coast harbors, but available in an emergency, the battleships Oregon and Wisconsin, the monitor Wyoming, three destroyers, two submarines, and eleven unarmored cruisers of various ages and sizes.

If eight battleships should remain in the Pacific, ten would be left for the Atlantic. When Evans sailed last December there remained in Atlantic waters practically no battleships save those in reserve and out of commission, the Iowa, Indiana, Texas, and Massachusetts. Of armored cruisers there was in reserve the Brooklyn, and under repair, the New York; of the monitors, three in reserve. Since the beginning of 1908 there have been placed in commission the new battleships New Hampshire, Mississippi, and Idaho, and the recently finished armored cruiser North Carolina. If the Iowa, the best of the older vessels, were recommissioned, a division of four battleships, or one-half of the eight to be left in the Pacific, would be ready to join the ten which will arrive from the Pacific. To take the places of the other four there are under construction or approaching completion the South Carolina, the Michigan, the Delaware, and North Dakota. In about two or three years, therefore, the loss of the eight battleships from the Atlantic fleet would be made good—unless the Iowa be subtracted, because of her age; and there would then be nearly completed the two leviathans just authorized by Congress. Plainly, therefore, such a plan as we suggest would only weaken the Atlantic fleet for a brief period; and to replace the armored cruisers on the Pacific a division of four could be found, the Montana—just 98 per cent. completed—the North Carolina, the Brooklyn, and the New York. Within four years, were this programme followed, we should have, without any further legislation, the two-ocean fleets which our naval enthusiasts are now so loudly demanding, reinforced also by the two new scout cruisers, five new destroyers, and eight new submarines. And this tabulation takes no account of the swarm of unprotected cruisers, torpedo boats, destroyers, and submarines, now in service in Atlantic and West Indian waters and in reserve in our various navy yards.

For shaking hands in public with a woman anarchist—three years in jail. This is the fate of a soldier of fifteen years' excellent military service, including one war. No; this has not happened in Russia. It was not the decree of Kaiser or Czar or of an aristocracy in deadly fear for its existence. It is a little incident in our American life, in the land of the brave and the home of the free. The soldier is Private William Buwalda of Company A of the Engineer Corps, and his offence consisted in going to an anarchist meeting in uniform and there shaking hands with Emma Goldman at the conclusion of her speech. Buwalda himself insisted that he attended the meeting merely in order to perfect himself in shorthand; the court-martial which tried him gave him a sentence of five years, afterwards reduced to three by Gen. Funston. Now, nobody is more opposed to anarchists than the *Nation;* but it is news to us that attending an anarchist meeting is a military crime. It is certainly not defined in the Articles of War; indeed, we doubt if it is specified anywhere as contrary to army regulations. If Buwalda had any knowledge that he was forbidden to attend certain meetings, we should be surprised. At most, he was guilty of an indiscretion; and the sentence is wholly disproportionate to the offence—unless the court wishes to make an anarchist of him. Meanwhile, the case stands as another example of our national hysteria over what is a state of mind, and not in itself a crime.

The result of the vote on prohibition in North Carolina was a foregone conclusion. If, in the heat of the campaign, Gov. Glenn and other leaders of the anti-liquor movement called for a majority of 50,000 as necessary definitely to settle the question, an actual majority of 35,000 to 40,000 ought to be more than satisfactory. The line between the urban and the rural vote does not seem to have been sharply drawn. In some country districts there was an unexpectedly large anti-prohibition vote, while in the large towns the liquor vote appears to have shown a decided falling off. Thus North Carolina joins Georgia, Alabama, and Oklahoma in supplying new impetus to the prohibition movement in the entire South. In so far as the State itself is concerned, the change, though marked, will not be extremely radical, since already 95 per cent. of the area of the State has no saloons. The effect of North Carolina's action should be felt, however, not only in States that are contemplating taking the plunge into the swimming hole of prohibition, where, according to an Atlanta cartoonist, "the water is fine," but in Georgia and Alabama, which have already taken the plunge. In both States it has been inevitable that the imperfections of a drastic law should manifest themselves immediately after its application, and especially a law so notoriously difficult to enforce as that against the manufacture and sale of liquor. But Georgia's law is less than a year old, and Alabama's is an infant of weeks. That North Carolina should have refused to be frightened by the initial difficulties of her sister States argues a resolute desire to try prohibition.

We have not read a better account of the political revolution that has been going on in the South since the close of the Ku Klux period than that in the current *American Magazine* by Ray Stannard Baker. Many observers have dwelt upon the rise to power of the "poor white," but few have realized that this is essentially a great democratic movement, a reaction from the aristocratic régime which began with this republic and only now is finally passing. Democratic institutions never really existed in the South. During slavery times, there were no public schools, and the leaders in the political world were as proud of their blood and breeding as any English aristocrats. The downfall of slavery, peculiarly an institution of caste and privilege, gave the ordinary white man his opportunity; but he made little use of it until such demagogues as Tillman, Vardaman and Jeff Davis showed the way. Since the overthrow of privilege in any guise must cause rejoicing, particularly in a republic, the question which naturally suggests itself is why the new politican of the South should not be welcomed with open arms. The reply is that such a man as Tillman is not a democrat at all, but simply a leader engaged in wresting for his own class the special advantages heretofore enjoyed by others. Were these men standing on the simple platform that all men are born free and equal before the law, it would be easy to bear with their crudities, their vulgarities, and their impassioned appeals to the groundlings. But, as Mr. Baker clearly shows, it is only for the white man of their own kind that they are laboring, when they are not in the field for their own personal advantage. The negro figures in their reckoning only as a sort of bogy with which to stir the passions of the multitude and strengthen their own faction. But if dangerous tendencies, grave wrongs, and many false leaders have been developed in the South's political revolution, it is, nevertheless, a revolution in the right direction. Learning, wider knowledge of the world and affairs, the greatly increased variety in the industrial product of the South—all these things forbid the thought that any movement to make helots either of negroes or the lowest whites can ultimately be successful. This is the worst period in the world's history for any set of men to try to make themselves masters of the fate and the labor and the lives of others. The very democratic forces which Tillman and Vardaman have set in motion move like the glacier, imperceptibly to the casual observer, but none the less steadily; since the days of Magna Charta progress, despite temporary delays, has been in only one direction.

Forgery is a natural handmaid of gambling; and the opposition to the Governor's plans to abolish legalized gambling on the race-track seems to be suspiciously afflicted by the assistance of forgers. In addition to the forged telegram to Senator Cassidy, for which the guilty man in Washington is to be put on trial, we now have the fact that forged letters of protest are being sent in numbers to Senator Agnew and others who have stood by Gov. Hughes. The job is clumsily done: alleged workingmen are sending nicely typewritten letters, on stationery of fine texture. But the animus and unscrupulousness of the attempt are plain, and show what kind of forbidden weapons desperate gamblers will not hesitate to use.

The American Free Art League tells in its last circular of the way in which our barbaric tariff on art operates against even public museums, which are supposed to get their importations free. As a matter of fact, four-fifths of the foreign works of art have come to the museums through the medium of private ownership and have thus paid duty. But there are other instances of hardship. Recently the Chicago Art Institute found itself in possession of two examples of Jules Breton which were very similar. The policy of the Institute was therefore to sell one, and with the proceeds secure some painting that would be a greater addition to the collection. But since the painting by Breton had entered the United States under bond, the Institute was compelled to turn over to the government a duty of $1,000. In any case, duty must be paid on picture frames made abroad; and here again the museums are mulcted. The story is an old one, but it must be told again and again till Congress is brought to the point of revising the tariff and abolishing a tax on education and æsthetic culture.

The proposed "canons of legal ethics" published by a committee of the American Bar Association, preparatory to submission at the annual meeting in August, will not of themselves purify the profession. No one expects that, or thinks that the solemn oath now suggested will really make it much harder for corporations to obtain men of eminent ability to show them how to evade the laws, or will drive out all the shysters who pluck and fleece the unfortunate and create litigation that they may profit by it. But since the genuine uplifting of the profession can come only from within, this symptom of the stirring of the lawyer-conscience is full of encouragement. It will be well, indeed, both for the client and for the legal adviser, to have these opinions as to what does or does not constitute proper professional conduct. It would be of value, also, if there could be a wider knowledge of the existence of the grievance committees of local bar associations. Some other easier way there ought to be, too, of disbarring the corrupt practitioner. The courts themselves could lend a hand here, were they so disposed; but, unfortunately, our permitting the naming of the judges by political organizations has left them, in this city at least, so open to attack by the profession that they are themselves often unfit to sit in judgment upon professional delinquencies.

In Radical parliamentary circles in England there is vehement opposition to the contemplated journey of Edward VII. to St. Petersburg. Should the head of liberty-loving Britain take to "hobnobbing with a blood-stained creature like the Czar?" The problem frequently recurs, and is not free from anomaly. What use is there, for instance, in speaking of that force of the world's opinion before which even Russian tyranny must tremble, if the world's crowned heads and governors stand ready to enter into the most amicable exchange of courtesies with the men so largely responsible for the stifling of liberty in Russia? It would seem that foreign opinion could express itself in no stronger form than through a refusal of the British monarch to meet the Czar. That would be repeating with tremendous force the late Campbell-Bannerman's challenge: "The Duma is dead, long live the Duma!" But that, unfortunately, is royal action of a kind possible only in a world of distinctly separated saints and sinners. How if the Czar were to refuse to meet Francis Joseph because of the way the Galician Poles treat the Ruthenians? And if Francis Joseph should refuse to meet William II. because of the way East Prussia treats the Poles? And if William II. should cut Edward VII. on account of the Bengalis, and Edward VII. should snub M. Fallières on account of the Moors, and M. Fallières should convey to Mr. Roosevelt his distress over our policy in the Philippines? Public opinion, expressing the moral protest of the best elements in a nation, may be justly directed against the evil that other nations do. But heads of states, who sum up in themselves the vices of their country as well as the virtues, are not in a position to cast stones.

Along with movements for the preservation of scenic beauty, naturally go efforts to make that beauty accessible to the public. The House of Commons has just read a second time a bill conferring "the right of free access to uncultivated mountain and moorland." A similar bill for Scotland was pushed by that enthusiastic mountaineer, James Bryce, about twenty years ago, but failed of passage. It was about the time when the Winans case—a man holding a great tract of land from sea to sea, patrolled by keepers, and with the public wholly excluded—caused much scandal. The present bill applies to England and Wales, as well as Scotland; and the disposition of the House appeared so favorable—the vote was 177 to 65—that the measure seems likely, in some form, to be made law. It would suspend the ordinary law of trespass to the point of providing that no person could be kept from uncultivated hills or heaths if he were there "for purposes of recreation or of scientific or artistic study." One golfing opponent of the bill appealed to prejudice by declaring that, under the terms of the proposed act, a tramp might sit down on the eighteenth green at Sandwich and refuse to move, for the reason that he was there for recreation. But the Attorney-General met all such legal quibbles with good-humor and apt judicial decisions.

CAMPAIGN EXPENSES.

Everybody at Washington has been working so assiduously to put everybody else "in a hole," that the practice has spread. Mr. Bryan has now attempted to give Secretary Taft a tumble in the matter of making public all campaign contributions. The latter, however, with that agility by which stout men often surprise onlookers, climbed lightly out of the cavity. He made public his letter of a month or so ago to Senator Burrows, advocating the McCall bill to enforce publicity. Mr. Taft added that he stood firmly by his record in favor of preventing corruption at elections by the secret use of money. At this, Mr. Bryan could be no less than "very much gratified"; and renewed his urging that Congress pass the pending measure before adjournment.

On one point, both Mr. Taft and Mr. Bryan could immediately enlighten their countrymen without an act of Congress. They could tell us what their respective campaigns for the nomination have cost. If we are to have publicity, let us have it all along the line. It might easily happen that an election would be comparatively pure, although a nomination for the election had been procured by corrupt means. Mark Hanna's two years' campaign to bring about the nomination of McKinley in 1896 was lavishly financed; and the political paying off of the pecuniary obligations thus incurred was an embarrassment and a reproach to the Administration. Even if the preliminary expenditures are wholly honest, the demand may be legitimately made that their amount be published. This is one of the things that

> 'tis but just
> The many-headed beast should know.

Under the English Corrupt Practices Act, all this outlay by candidates has to be inventoried and made oath to. Section 63 of that act fixes the time from which a candidate has to keep accurate account of all his expenses, for subsequent filing, as "on or after the day of the issue of the writ for such election"; and those who have to make the return include "any person who is nominated as a candidate, or is declared by himself or others to be a candidate." This would cover both Bryan and Taft for at least six months back; and it would be interesting and pertinent to know what sums have been spent to promote their candidacy. We have heard a very large sum mentioned as the contribution of Mr. Taft's wealthy brothers. A friend of the Secretary's stated as of his own knowledge that more than Taft's official salary had been paid out on long-distance telephone tolls alone. It has been estimated that Mr. Bryan has personally expended $50,000 to secure the nomination, besides what friends of his have put into the common treasury. All these details are an essential part of campaign expenses. A law as rigid as the English would compel their publication. But our two "leading candidates," as they modestly avow themselves to be, can settle all this on their own motion. Gov. Johnson, we notice, declares heartily for the idea. We dare say that Gov. Hughes would be willing to submit his personal accounts, which we have every reason to believe would include nothing but his travelling expenses. Certainly, it will not do for candidates to complain of the inaction of Congress so long as they take no action themselves. Let Mr. Bryan send another telegram to Secretary Taft proposing that they inform the people what amount of money has been laid out by or for either in securing delegates. We think the resulting "hole" would be large enough to accommodate both candidates.

The bill which the House insincerely passed, after tacking on amendments designed to make its defeat certain in the Senate, is a reasonably good measure to regulate the actual election of Congressmen and Presidents. Full and itemized accounts are to be kept of all funds received and expended. Not more than fifteen days and not less than ten before the election, a sworn statement of receipts and expenditures is to be filed with the Clerk of the House of Representatives, and become a public record freely open to inspection. Similarly, within thirty days after the election, a supplementary statement is to be filed, containing a complete and final account. Lastly, to round out publicity of contributions, all sums above $50 given by any individual or association not through the party committee, must likewise be made oath to by their donors, and recorded as in other cases.

It is really unaccountable that no help in the passage of this bill to secure pure elections was had from President Roosevelt. He referred to it perfunctorily in his annual message, but in none of his urgent special messages, enumerating the things which Congress ought to do before adjourning, did he speak a good word for this measure. Its friends did not pretend that it awoke any interest in the White House. Yet no one should know better than Mr. Roosevelt what suspicion will dog the Republican campaign this year unless effective steps are taken to let the country know about political contributions. Democrats will shout from every stump that the President is again, as in 1904, getting secret gifts from his "practical" friend, Mr. Harriman. It will be asserted that Wall Street is for Taft, as it undoubtedly is, and the charge will be made that speculators are contributing large sums to buy the election. Now, the only way to refute such slanders, if slanders they be, is by entire frankness in making the party accounts public. The day of the huge corruption fund, gathered in the dark and spent in secret, has gone by. One way or another, the people are bound, as they are entitled, to know what it costs to nominate and elect a President. In the absence of legislation, the two national committees should bind themselves to do what the McCall bill would have required; and if the Independence League is invited to join in, we make no doubt that the shrinking Mr. Hearst will be glad to let his costly light shine.

THE SENATE RULES.

Senatorial indignation has run high over the attempt to prevent "the most august assembly on this earth" from voting on the currency bill. Both filibuster and filibusterers have been denounced without mincing language. One Democratic Senator was quoted as saying: "This has been the most disgusting proceeding I ever witnessed in the Senate." In the cloak-rooms and hotels, the language used was still plainer. Well, everybody knows what it is that exposes the Senate to this ignominious treatment. It clings to antiquated rules of procedure which open the door wide to such abuses. According the right of absolutely unlimited debate, and possessing no machinery to make an end of sheer obstruction, it places itself in the power of any unscrupulous or determined or merely fanatic member. If May 29, 1908, had been March 2, 1909, the Senate would have been wholly unable to pass a bill which a large majority earnestly desired to enact into law. This is to reduce any law-making body to imbecility.

It must not be supposed that the Senate has maintained its obsolete rules out of pure inertia. One motive has undoubtedly been a kind of pathetic ambition to preserve an ancient dignity. When the Senate consisted of 26 members, met in secret, and was much like a Privy Council, parliamentary constraint was scarcely necessary. Gentlemen would agree in a gentlemanly manner. Steeped in this honorable tradition, some Senators are unquestionably sincere in deploring the need of limiting debate in the Senate. But that has been by no means the chief consideration. Senators have grasped at the enormous power which the rules offer to an individual. They have been glad to have a weapon in the rules which would give them more influence than they could hope to exert by weight of character or force of argument. The opportunity to interpose a personal veto upon legislation is what Senators have cherished. They have been able to serve notice that a given bill could not be passed because, if necessary, they would talk it to death. This power, they have felt, has greatly enhanced their position. It is this which has helped them to control Representatives, dozens of whom one Senator would outweigh; and to threaten the Administration and force favors in the way of patronage from the Executive. So when the Senate groans over a "disgusting proceeding" under the rules, people are not really blind to the selfish motives which have thus far prevented such a change in the rules as would put the Senate on a par with all other legislative assemblies in the world. The Senate has not changed its procedure because the leaders of the Senate see individual profit in not changing.

The question is how many more senseless filibusters will have to uncover the defencelessness of the Senate before measures are taken to assert its authority. There is no demand for applying the rules of the House to the upper chamber. Nobody wants to throttle debate; all that is asked is that the wanton abuse of debate shall not be allowed to throttle the Senate. There is such a thing as reason in legislative discussion, and when it has run beyond all reason, legislators owe it to themselves and to their constituents to devise rules by which the endless flow of irrelevant words shall be stopped, and the individual or the group be compelled to let the majority have its will. What is wanted is not the extinction of the freedom of debate, but the parliamentary suppression of the man who takes advantage of outworn rules and bars all action.

Short of some form of the closure, which we think the Senate will yet be forced in self-defence to adopt, there is much that could be done by a vigilant and firm presiding officer to put an end to such inflictions as the Senate suffered from on Friday and Saturday. Certain dormant rules were, for the occasion, revived and enforced—as that no Senator should speak more than twice on the same subject on the same day. But there is an inherent power in any presiding officer, which could be asserted, rules or no rules, and which would cut off a great deal of the talking (or rambling) against time which disguises itself as debate. We mean the power to make every orator speak to the question. This is a recognized function of the Speaker of the House of Commons. Debates in that body are, heaven knows, tedious enough, but if a member wanders far afield, either out of mere stupidity or in order to kill time, the Speaker calls him back to the subject before the House. This may be done on the Speaker's own motion, or at the prompting of a member. A similar practice holds in our House of Representatives. More than once, during the past session, a member has been called to order for not speaking to the question. This is an essential part of the orderly progress of debate; and it is the business of the presiding officer to see that business is conducted in an orderly manner. And if Vice-President Fairbanks had resolutely refused to permit Senator La Follette to read from a novel, or from irrelevant government reports, he would have been acting within his inherent rights as a presiding officer, and would surely have been sustained by the Senate.

Without a change in the rules, a bold presiding officer might go still further. He might do what Speaker Brand did when he broke through the systematic obstruction of the Irish members in the eighties. After two or three days and nights of that clutching of the House by the throat, the Speaker announced that the right of debate had been grossly abused, that it was plain that the pending question had been more than sufficiently discussed, and that he would proceed to put it to vote. Of course, he first notified Mr. Gladstone of his intention, and also the leader of the Opposition, and was certain of being upheld; yet his action was only an assertion of the inherent dignity and the real duty of the chair. Such a course might profitably be followed by the Vice-President, who presides over the Senate.

A SOUTH AFRICAN FEDERATION.

The college instructor who wishes to give his students a clear conception of the circumstances in which the American nation was born, might well quote freely from the current dispatches from South Africa. Where British and Boer fought some six years ago, a new British commonwealth is now in the process of formation; and the causes that are bringing Cape Colony, Natal, the Transvaal, and the Orange River Colony together are largely those with which writers on the "critical period" in our own history have made us familiar. If the past really helps us understand the present, the obverse is equally true. The Jacquerie that preceded the outbreak of the French Revolution, the château-burnings, and that prolonged, partly silent, yet mortal "war in the village" that went on over the greater part of France while royal ministers of finance kept on contracting new loans, must have taken on new color to the reader of W. E. Walling's recent articles in the *Independent* on the agrarian upheaval of two and three years ago in Russia. The story of Nunzio Nasi, a former Minister of Public Instruction in Italy, who has been found guilty of gross peculations, and who was fond of removing art treasures from the public buildings to his own house, brings his countryman, Caius Verres, more vividly to mind than all of Cicero's orations. And Diocletian, in his Dalmatian cabbage-patch, may come nearer to us if we think of him as carefully watching from his retirement at Salona to see that the Cæsar who succeeded him was faithfully carrying out his predecessor's "policies." And so in the present South Africa we may read something of past America.

A united South Africa has been predicted for some years, if on no other ground than on the analogy of our own country, of Canada, and, within the last decade, of Australia. The British Empire is the fecund mother of self-governing commonwealths, and the pangs of their birth do not greatly differ. The latest move towards South African federation has arisen out of colonial quarrels over railway and customs policy. The Transvaal is, of course, the richest of the four colonies, and is predominantly an industrial region. It is the largest purchaser both of foreign manufactures and of domestic agricultural produce. Hence, the prosperity of the Cape Colony ports, Cape Town, Port Elizabeth, and East London, and of Durban in Natal, and of the Cape Colony and Natal railways, has depended on the Transvaal trade. But the natural harbor for the Transvaal, Lourenço Marques in Portuguese East Africa, is over fifty miles nearer than Durban to Johannesburg, and, approximately, only one-third as far from Johannesburg as Cape Town. The obvious interest of the Transvaal in shipping by way of Lourenço Marques has thus been in conflict with that of the other colonies—a conflict which has hitherto been minimized by mutual concessions under a railway agreement to which all the colonies are parties. But the years since the war have been years of industrial depression in the Transvaal, and of consequently growing restlessness under an arrangement which that colony has always regarded as more or less inequitable. It was to consider a revision of the railway agreement and of customs rates—the colonies are united in a customs union—that a conference met at Pretoria on May 4, and it was only two days later that this body, having assembled in no very amicable spirit, issued the following declaration:

> The delegates of the self-governing colonies have adopted the principle of closer union, and undertake to submit certain resolutions to their Parliaments with reference thereto. They also undertake to recommend to their Parliaments the appointment of delegates to a national convention for the purpose of framing a draft Constitution.

It was like the ending of a lovers' quarrel. The convention is to meet some time this year, and it has already been decided that the Constitution which it may frame shall be submitted for approval or rejection, without the right to alter, to the various colonial Parliaments.

Federation will not, however, come within a year or two, if the Australian precedent is to count. But that it will come soon is everywhere looked upon as a certainty; and the colonies have already fallen to disputing over details. Here again we are reminded of the period preceding our own Constitution. The conference fixed the membership of the convention at thirty, of which the Cape Colony is to have twelve, the Transvaal eight, and Natal and Orange River five apiece. Whence arises much discontent in Natal, and a less amount also in the Transvaal. Readers of our history will recognize an old friend in the protest of the *Times of Natal*, that, "Natal is entitled to equal representation at the proposed conference, and that the resolutions strike a blow at the State's rights"; or in the fear of the Transvaal *Cape Times*, lest "the resolutions give the big states power to squeeze the smaller." It is the Virginia plan, and the New Jersey plan of 1787, all over again.

Other analogies are to be seen. There is in Rhodesia a vast territory reserved for future British-Boer expansion, which exercises to some extent the same unifying influence that our own Northwest Territory did. There is the native question, more formidable to South Africa than our own was to us, as we see it now, though not as the founders may have thought it. There will come up, too, undoubtedly, the question of apportionment of power in the federal legislature as between British and Boer, corresponding roughly to our own North and South. For, though there is no question of actual racial division in the future state, a line of demarcation must naturally persist for years to come. The United States of South Africa, when a fact, will contain an area of 475,000 square miles, a white population of some 1,200,000, and a native population of over 4,000,000. And, if we include Bechuanaland and Rhodesia, the area will be 1,200,000 square miles, and the native population nearly 6,000,000.

A WORD FOR THE SWAN OF LICHFIELD.

It is time that some one spoke a good word for Anna Seward, the Swan of Lichfield. She died in 1809. The next year Constable brought out her poems in three volumes, edited by Scott, who generously said: "The name of Anna Seward has for many years held a high rank in the annals of British literature." In 1811 Constable published also six volumes of her letters, in which the editor discovered "many intellectual and moral excellences." Finally, in 1813, W. C. Oulton compiled "The Beauties of Anna Seward, Carefully Selected and Alphabetically Arranged under Appropriate Heads." He declared that "as a writer Miss Seward had great merit." But since then the devil's advocate has been busy. Our historians and critics of literature have named her only to damn her. Lately the interest in her has slightly revived. Last autumn E. V. Lucas gave us a book devoted to the Lichfield circle, "A Swan and Her Friends"; but he could not resist the temptation to ridicule her. Some months ago Miss Repplier, in one of her wittiest articles in the *Atlantic*, made game of the Swan; and now in the June issue, writing of "Our Great-Grandmothers' Novel," Miss Repplier indulges in a few more sly digs at Miss Seward—*tantæne animis cœlestibus iræ!*

Miss Seward's affectation and vanity we do not deny; but we maintain that her faults were due largely to her social and intellectual surroundings. If we take her as a representative of her class, the eighteenth-century blue-stocking, we shall find it very entertaining to skim through her writings. Even the most ambitious of us cannot always follow Frederic Harrison's advice to read only "the best, the eternal, the indispensable books"; and if we turn aside from the main travelled road of the age, we can find no pleasanter or more instructive by-path than Miss Seward's "Letters" and her "Memoirs of the Life of Dr. Darwin." This path does not lead over the heights; it does not command a noble prospect; but it runs through a quiet cathedral town where Samuel Johnson and Garrick were born and where the luckless Major André made love to Honora Sneyd; it affords us glimpses of a few of the great authors of the day, and a host of the lesser; it passes the Etruscan vase at Bath-Easton and the learned ladies gathered round it to read their verses and wear the crown of myrtle—assuming important little airs of authorship, just as hundreds are doing to-day. If we are familiar with the work of Miss Seward's contemporaries, we perceive that her absurdities of thought and style are but an exaggeration of the traits of Johnson, of Cowper, of Henry Mackenzie with his "Man of Feeling," and of Miss More. Even these absurdities seem almost pathetic as we draw to the end of the "Letters" and pierce through all affectation to the fact that Miss Seward's life, in spite of literary success and popular plaudits, was in essence a tragedy.

Her "Monody on Major André" is to this day much sought by collectors of Americana. Since Honora Sneyd had been her bosom friend, Miss Seward's interest in André and her indignation at Washington are but natural:

> Oh WASHINGTON! I thought thee great and good,
> Nor knew thy Nero-thirst of guiltless blood!
> Severe to use the pow'r that fortune gave,
> Thou cool determin'd murderer of the brave! . . .
> Remorseless WASHINGTON! the day shall come
> Of deep repentance for this barb'rous doom!
> When injur'd ANDRE'S memory shall inspire
> A kindling army with resistless fire;
> Each falchion sharpen that the Britons wield,
> And lead their fiercest lion to the field!
> Then, when each hope of thine shall set in night,
> When dubious dread and unavailing flight
> Impel your host, thy guilt-upbraided soul
> Shall wish untouch'd the sacred life you stole!
> And when thy heart appall'd, and vanquish'd pride
> Shall vainly ask the mercy they deny'd,
> With horror shalt thou meet the fate thou gave,
> Nor pity gild the darkness of thy grave!
> For infamy, with livid hand, shall shed
> Eternal mildew on the ruthless head!

But for such an outburst as this we need feel no resentment, for, as she tells us in one of her letters, when she learned all the facts she was "filled with contrition for the rash injustice" of her censure.

The story she tells in the "Life of Dr. Darwin" about Thomas Day, author of "Sanford and Merton," has often been reprinted. Disappointed by a fickle sweetheart, he decided to train a wife to his mind. "He resolved that she should be as simple as a mountain girl in her dress, her diet, and her manners; fearless and intrepid as the Spartan wives and Roman heroines." But he was grievously disappointed. Struggle as he might, he could not make the girl proof against the dread of pain and danger. When he dropped melted sealing-wax upon her arms, and when he fired blank pistols at her, she would persistently start and scream. Less familiar, perhaps, are Miss Seward's anecdotes of Johnson as she saw him on occasional visits to Lichfield. For example:

> Johnson told me once that he would "hang a dog that read the 'Lycidas' twice."
>
> "What then," replied I, "must become of me, who can say it by heart, and who often repeat it to myself with a delight 'which grows by what it feeds upon'?"
>
> "Die," returned the growler, "in a surfeit of bad taste."
>
> Thus it was that the wit and awless impoliteness of the stupendous creature bore down by storm every barrier which reason attempted to rear against his injustice.

Miss Seward when young, Sir Walter assures us, "must have been exquisitely beautiful"—as an engraving of her portrait by Kettle abundantly testifies. She had her share of attention from men. While scarcely more than a girl she became engaged to marry, but her father broke off the match. Other suitors appeared, but, for some reason, she accepted none of them. Outwardly she made the best of her lot as a spinster: she advised bringing up girls with a taste for literature, which "must preclude the discontents of celibacy, should celibacy be their lot"; and she protested that she was "perfectly reconciled to her . . . old-maidism." Certainly, she enjoyed all the consolations of fame. Wherever she went she was lionized; and she was convinced that the offspring of her mind would live forever in the hearts of posterity. Yet the fondness with which she dwelt on compliments to her fading charms, and on the memory of her love affairs, indicates that, as the burden of lonely years and ill-health increased, she might gladly have exchanged her laurels for a husband and children of her body. And if she can now look down upon the dust which lies thick upon her books, disturbed once in a score of years by some curious student, she must feel infinite pity for all women—from the ambitious, sweet girl graduate to the last popular novelist—who are founding their happiness on the hope of literary immortality.

SIR THOMAS BROWNE.

I.

There is withal something of the amateur about Sir Thomas Browne, and, more perhaps than any other great writer of English, he is saved from "the iniquity of oblivion" by his unexpected phrases and his isolated flights of fancy that cling to memory like the "wild enormities of ancient magnanimity." And yet as, lured on by the handsome pages of this new edition of his works,[*] we read his greater and lesser treatises in order, it gradually becomes clear that his writing is not so haphazard as it seemed, and that even to a peculiar degree he was concerned with a single idea dominant in his age.

The two aspects of that idea were rationalism and science, for which the early years of the century had prepared the way and which the latter years were to see fully developed. Between the inception and the consummation of the movement we may, without insisting too arbitrarily on such a division, observe in England a moment of uncertainty, marked in philosophy by the attempt of Henry More to reconcile the ancient sombre mysteries of religion with the coming optimistic deism, and in science by the divagations of our Norwich physician. From the many workers who laid the foundation of science three names may be selected as variously typical: Bacon, its prophet; Descartes, its theorizer; and Aldrovandus, its practical exemplar. All three were conscious of the radical break with the past involved in the new idea. "The only clue and method," wrote the Englishman in the Preface to his "Great Instauration," "is to begin all anew, and direct our steps in a certain order, from the very first perceptions of the senses"; and at the end of this path he descried as in a prophetic vision the race of discoveries, sprung from the nuptial couch of the mind and the universe, which should fulfil the wants and vanquish the miseries of mankind. How deliberately Descartes swept, or tried to sweep, his brain free of the cobwebs of tradition, need not be told; he too had his vision, not so much of the future, as of the present universe revolving like some monstrous engine, wheel within wheel, all of whose intricate motions could be explained by purely mechanical laws. And already Aldrovandus, in his garden at Padua, had seen, imperfectly no doubt, the necessity of rewriting the whole book of natural history from actual observation. The fruition of the movement, so far as England is concerned, began in the year 1660, when Charles II., himself a curious observer of physical experiments, chartered the Royal Society. In a few years Newton and Locke, the acknowledged fathers of the eighteenth century, were to complete the theory of natural law and extend its sway over mankind, the one by his investigations of universal motion, the other by his analysis of the human understanding.

It was thus not merely the shackles of tradition the new scholarship would throw away; it would invade the ancient sanctuaries of the heart also, and for the humility of religious faith substitute its own pride of investigation. The end of that movement was not unapparent even to the men involved in its triumphant progress. Not a few of them foresaw and dreaded what seemed to them a limiting of man's spiritual life under the rationalizing tendency of science and deism; and the middle of the seventeenth century, in the years before the dominion of Newton and Locke, shows a number of writers who revolted against the new tyranny, either by denying its dictates or by accepting them and twisting them to other conclusions.

II.

Our Norwich physician, half-unconscious, no doubt, of his position, and with the Briton's usual incapacity of logic, was led by the insubordinate faculties of the poet within him to another door of escape. Coming back to England from the Continental schools where the militant ideas were already far advanced, he felt a troubled uneasiness of conscience, and in his "Religio Medici" undertook to establish himself in a safe compromise. As the title of the book implies, the problem presented itself to him immediately as the need of reconciling orthodoxy and the materialism of the new medicine; and so he begins:

> For my Religion, though there be several Circumstances that might persuade the World I have none at all, as the general scandal of my Profession, the natural course of my Studies, the indifferency of my Behavior and Discourse in matters of Religion, neither violently Defending one, nor with that common ardor and contention Opposing another; yet, in despite hereof, I dare, without usurpation, assume the honorable Style of a Christian.

Such is his thesis, but religion, as Pascal and Bunyan understood it and as his orthodox enemies were not slow to observe, receives scant attention from his wandering mind, while his boasted tolerance toward the creed of Catholic, Jew, or Pagan is next of kin to indifference. In effect his work takes its place, a splendid place, among the innumerable protests of the imagination against the imperious usurpations of science. The freedom of fancy which had wantoned in every arbitrary and impossible combination of natural objects—

> Humano capiti cervicem pictor equinam—

such license was becoming impossible for a trained intellect, as Browne himself had proved in his "Vulgar Errors." If the spirit were to maintain its liberty against the encroachments of a fatalism, which would reduce the circle of a man's life to a mere wheel spinning for an hour in the vast unconscious mechanism of the world, it must be by the assertion of another principle distinct from and unmoved by the levers of physical energy. Bacon, and more definitely Descartes, had indeed granted this immaterial law,, but—*quæ supra nos nihil ad nos*; they were pleased to leave it in the sphere of the lofty inane, with no hold upon the heart and actions of men, with no answer to the cry of the bewildered conscience, with no root in human experience—an empty figment of the reason or a sop to quiet the barkings of the Church. What they lacked essentially, and what Sir Thomas Browne supplied, was the primary imagination, as later it was to be defined by Coleridge—the faculty, that is, by which we unite the broken and dispersed images of the world into an harmonious poetic symbol. In their investigation of the law of nature they did not sufficiently recognize that these observed phenomena are but the shadow, too often distorted and misleading, of the greater reality which resides within the observer himself, and obeys its own law. In their haste they lost the power of subjecting the less to the greater reality, of associating the outer with the inner, and thus of finding through the many that return to the one, which was, as Coleridge interpreted the phrase, the *esemplastic* function of the imagination. They followed too well the precept of Bacon: "The understanding must not therefore be supplied with wings, but rather hung with weights, to keep it from leaping and flying."

III.

It is, I know, a part of our present-day eagerness for obliterating distinctions to deny any incompatibility between science and religion, as between science and poetry. And in a way no doubt science has its own faith and its own imaginative domain. Who can be insensible to the exaltation that must come from tracking nature into her secret reserves? who has not felt that exaltation when the mind opens to the thought of illimitable dynamic law? And always there is the residuum of mystery at the end of our actual vision, intensified it may be by the slow-groping security of our approach. There is the imagination of science as of religion. Some minds may dwell in one and the other of these alternately, or even confuse them together; but in their essence they are distinct. If we were to define these two genera scholastically we should say that the scientific imagination is quantitative, the religious qualitative. Thus Lucretius, impressed by the almost infinite divisibility of matter, and the impossibility of conceiving any ordered relation among so many parts, sees in vision the innumerable atoms hurtling blindly toward some centre of space, all obeying, so far as the shock of other atoms permits, some incalculable whim of diverse motion, and, after countless changes of combination, cohering for a moment in the forms of this world. Such a vision is the carrying to a quantitative extreme of the chance and individualism that, to a first glance at least, seem to control the momentary meetings and separations of men and things. It is, without the introduction of any new quality, the utmost visible extension of our feeling of that which Cæsar called "Fortune whose whim governs mankind." Of the same sort quantitatively is the development of the sense of order in things, as seen in another mood, to a universal scheme of nature, typified so graphically by the legend of Newton's deducing the law of gravitation from the fall of an apple. There must be powerful excitement of the imagination, an almost overwhelming magnitude of vision, in this exercise of the scientific faculty; we know how profoundly Newton himself was stirred by the grandeur of his discovery. There is in it also, we must admit, something disquieting to most minds when they enter into themselves to reflect on this dominance of nature whether it be in the direction of ungoverned chance or of inevitable regularity. The melancholy, if not the madness, of Lucretius is well known:

---

[*] *The Works of Sir Thomas Browne.* Edited by Charles Sayle. 3 vols. (The English Library.) Edinburgh: John Grant.

> O miseras hominum mentes, O pectora cæca!
> (O wretched minds of men, O blind hearts! in what shadows of life, in how great perils, is passed this little term of being!)

Nor is there less significance in the anxious awe of Herbert Spencer at the contemplation of those unsoundable gulfs of space through which his law of irresponsible evolution extended its sway. These are the nostalgias of impersonal science.

Now, what has been called the qualitative imagination, religious or poetic, may show itself in the same mind with the quantitative, but it always implies the admission of a new element. Thus in Lucretius side by side with his vision of endless ruthless motion is the conception, at least the passionate desire, of a calm which may remove him entirely outside of the world's despotic chance. When, in the exordium to his second book, he breaks into that magnificent praise of the *sapientum templa serena*, the lofty and serene places whence the wise may look down dispassionately on the wanderings of men and their restless seekings and cruel ambitions, it is no mere separation from toiling mankind for which he prays, but a retreat of religion within his breast, where he may take refuge from the terror of these wild aberrations carried into the very being and mechanism of the universe. It was thus, in the superb expression of this longing for a faith which his reason would not admit, that he may be said to have denied divinely the divine. Newton also turned from his contemplation of inexorable natural law to the most orthodox and childlike confidence in Providence and the medley of Hebraic prophecy. We are apt to forget that besides his "Principia" he wrote an exposition of Daniel and the Apocalypse. Lucretius, intellectually a man of science, emotionally a poet, seeks relief in pure negation, and balances annihilation against the world. Newton apparently never tried to connect his science and his religion or saw any difficulty in embracing both at once; his dualism of nature and deity was of that mechanical sort which is only possible when a man has not stopped to realize his ideas in actual human experience.

IV.

Sir Thomas Browne, it is needless to say, stands far below Lucretius in emotional vigor and as a man of science is not to be named with Newton; but in his method of escape from an overweening naturalism he has a place of his own in the long battle of the spirit. In him the witness within does not speak in the Lucretian voice of magnificent denial, nor is it, like Newton's, a mere echo of a past faith; but makes itself heard in every act of the intelligence. Always there is present the sense of something other and different lurking beneath natural law and peering out at the observer with strange enticements; and this to him was the great reality. He is one of the purest examples of the religious imagination severed from religious dogma or philosophy; dualism with him takes the form of an omnipresent and undefined mystery involving, and sometimes dissolving, the world into wonder—a dangerous faculty, one may add, and apt to run with time into the thinnest wash of romanticism, but saved in him by a sturdy regularity of character.

He was no systematic philosopher, nor is the "Religio Medici" constructed on a rigid argument—far from it. Yet, with all its fantastic divagations and its quaint confessions, this desire to restate facts in accordance with the author's "solitary and retired imagination" is never long absent and gives it a strong unity of effect. "The whole creation is a mystery," he says; " . . . a dream or mock-show, and we all therein but pantaloons and antics." Rather: "in this mass of Nature there is a set of things that carry in their front, though not in capital letters, yet in stenography and short characters, something of divinity, which to wiser reasons serve as luminaries in the abyss of knowledge, and to judicious beliefs as scales and roundles to mount the pinnacles and highest pieces of divinity. . . . This visible world is but a picture of the invisible, wherein as in a portrait things are not truly but in equivocal shapes, and as they counterfeit some more real substance in that invisible fabric." Theology itself is saved by its "wingy mysteries" and "airy subtleties."

It was inevitable that such a mind, groping in the bowels and anatomies of nature for a justification of faith, should have been fascinated by the underlying mystery of death, which, while extending the claims of materialism to their logical consummation, startles the observer by its horrible *reductio scientiæ ad absurdum*. The accidental unearthing of some old mortuary vessels was, therefore, only the accidental cause that set our author off in wild pursuit of the paradox which finds in the absolute negative of death the affirmation of omnipotent mystery. Through all the pedantries of the "Urn-Burial," with its notes on funeral customs jumbled together from every conceivable source, it is the glimpse of these mockeries of reason, breaking through the stiff language ever and anon with shrill vehemence, that keeps the interest of the reader alert. What is human pride before this imperious scoffer? "Now since these dead bones have already outlasted the living ones of Methuselah, and in a yard underground, and thin walls of clay, outworn all the strong and specious buildings above it, and quietly rested under the drums and tramplings of three conquests; what prince can promise such diuturnity unto his reliques?" Thus paradox swallows paradox, until at the end of the book, as all readers know, these tongues of eloquence leap together like the flames bursting upward from a funeral pyre, and the grinning contradiction of the tomb is lost in "the metaphysics of true belief."

Once again, in his "Letter to a Friend," Sir Thomas Browne takes up the theme of death; and again, as he tells of watching by the bedside of the young man who is fading away visibly into the invisible darkness, it is the strangeness of the miracle that absorbs him. He could not go to cure the body of a patient, he says elsewhere, without losing his profession in concern for the man's soul; but one interest of his own he must always take with him—his inquisitive research into the paradox of living and dying. Thus his "Letter to a Friend," with its lingering absorption in the present mystery creeping upon the world before the very eyes of the watcher like an all-obliterating shadow out of the infinite, may be regarded as a complement to the "Urn-Burial," with its rhapsody on the memorials of the past. Together they would seem to say: Look hither and lay aside vain pretensions; there is no knowledge of death.

V.

Other writers, especially in more recent times, have undertaken to express this constant dualism of knowledge and wonder, of reason and mystery, which it was the main business of eighteenth-century philosophy to deny, but none with the same magnificent impetuosity as Sir Thomas Browne. Something of his power was due to his age, something to the solidity of his training; but still more to the imaginative burden of his language. Of style in one sense he possesses, indeed, little; unless sustained by poetic emotion, he is never safe from floundering in the most awkward verbiage. He is, more, perhaps, than any other author in English, dependent for his fame on purple patches. But at its best, there is I know not what excellence of sound in his language, a melody through which we seem to catch echoes of otherworldly music, that ravish the hearer into an ecstasy of admiration. He has, as he himself might say, transfused into words the magic of that Pythagorean numerosity which forever haunted his understanding.

It is not easy to discover the secret of these harmonies in words, for his manner varies from page to page. At times, particularly in his earlier works, the language is brief and direct, built up on the simplest Anglo-Saxon roots. More often it has a touch of exotic strangeness, due principally to the excess of Latin. "He has many *verba ardentia*," said Dr. Johnson, "forcible expressions, which he would never have found, but by venturing to the utmost verge of propriety; and flights which would never have been reached, but by one who had very little fear of the shame of falling." There is undoubtedly a danger in this constant recourse to Latin idioms, as may be seen in many of his imitators. Dr. Johnson, who is known to have modelled his style on Sir Thomas Browne's, was able to attain by this means a gravity which raises the commonplace almost to the sublime; but other writers only sank with its weight. Whole passages in "The Seasons," for instance, halt and stumble, as if loaded with foreign chains. Browne himself, we may suppose, employed this pedantic style, as did Milton and others of that age, primarily because his reading was so much more in Latin than in English that these outlandish terms came to him more promptly than their home equivalents. But there is also at times an artistic consciousness that the note of surprise was better obtained by these unusual words and the desired richness of harmony more fully developed. I do not know whether the musical difference of the Anglo-Saxon and classical elements in our tongue has been analyzed, but to me they seem in the hands of a master to be related to each other as a pure tone is to one rich in harmonics. There is a full and complex effect from the sonorous Latin words due to countless half-remembered associations, comparable to the undertones and overtones that give the note of the violin its pathetic appeal. Almost always we catch these echoes of the past in the language of Sir Thomas Browne when most characteristic; they are heard clearly in such a passage as this, in the "Letter to a Friend":

> And altho' he had no Opinion of reputed Felicities below, and apprehended Men widely out in the Estimate of such Happiness; yet his nobler Contempt of the World wrought no *Democritism* or *Cynicism*, no laughing or snarling at it, as well understanding there are not Felicities in this World to satisfy a serious Mind; and therefore to soften the Stream of our Lives, we are fain to take in the reputed Contentations of this World, to unite with the Crowd in their Beatitudes, and to make ourselves happy by Consortion, Opinion, or Co-existimation: for strictly to separate from received and customary Felicities, and to confine unto the Rigor of Realities, were to contract the Consolation of our Beings unto too uncomfortable Circumscriptions.

That may sound at first merely quaint, if not cumbrous; yet to the attentive ear what subtle harmonies unfold themselves. To understand the force of this deliberate Latinization, consider for a moment the contrast of the words *felicity* and *happiness* that stand so close together. The Saxon word is direct, strong, simple, with the associations of the common homely feelings of the day. But in that thrice-repeated *felicities* there is I know not what strange accumulation of meaning from the hopes and desires and disappointments of many peoples through many ages. I hear, as it were a deep undertone, the grave reflection of Virgil's *Felix qui potuit rerum cognoscere causas.* I hear the pathetic phrase of Boëtius, thinking of his own fall from felicity and of the waning world: *Fuisse felicem et non esse.* That phrase, I recall, was caught up by Dante and placed in the mouth of his Francesca da Rimini: *Che ricordarsi del tempo felice*—"there is no greater woe than to remember in pain the time of felicity"; and from Dante it has passed into the emotional life of Europe. Echoes of the word come to me from great passages in Spanish and French, and last of all the plea of dying Hamlet to his friend:

If thou didst ever hold me in thy heart,
Absent thee from felicity awhile,
And in this harsh world draw thy breath in pain.

Can any one fail to perceive the lingering sweetness and manifold associations of the word *felicity* here as it is contrasted with the quick, stinging Saxon words that follow? Such was the music of the emotions sought and obtained by Sir Thomas Browne in the passage quoted. To vary the metaphor, his cunning use of Latin words affects the ear like the hearing of some majestic fugue, in which the melody, taken up by voice after voice, is repeated and varied and interwoven until the listener by the long accumulation of sound is rapt out of the solid world into mystic admiration.

Correspondence.

ROTOGRAPHS OF A WORCESTER CATHEDRAL MANUSCRIPT.

TO THE EDITOR OF THE NATION:

SIR: In connection with the recent discussion (see the *Nation* for March 5, March 19, and April 2), as to the best method of reproducing the valuable manuscripts of European libraries so as to make them accessible to students in America and elsewhere, it may interest many readers of the *Nation* to know that the library of Western Reserve University has just obtained rotographs of a Worcester Cathedral manuscript. These specimens of the rotographic process are certainly excellent, the white script on a black ground standing out boldly, so that in many places where the manuscript has been injured and the writing dimmed the reproductions seem to be sharper and more distinct than the original. With considerable experience in reading Old and Middle English, mediæval Latin, and old French manuscripts in the libraries of England, I should say the rotograph process, as the work is done by the Clarendon Press, is eminently satisfactory. So far I have not noticed that rotographs are any more trying to the eyes than any original mediæval manuscript of the same kind and size of script is likely to be.

For many of us American students who are not able to spend every summer abroad, such methods of making the treasures of the old world libraries available are little less than a godsend. And since the Modern Language Association adopted a plan at its last meeting for coöperative work among the libraries of this country in the rotographing of desirable manuscripts in the libraries of England, the day will no doubt soon come when American scholars engaged in research in the field of English literature, at least, may have the use of any valuable English manuscript by making proper application to one of the university or college libraries associated in the plan.

The Worcester Cathedral manuscript Folio 172, mentioned above, was virtually unknown to scholars until a couple of years ago, when a brief account of its contents was published in *Modern Philology*, July, 1906. Later in the same year, a description of it was included in the "Catalogue of Manuscripts, Preserved in the Chapter Library of Worcester Cathedral," compiled by John Kestell Floyer and Sidney Graves Hamilton, and printed for the Worcestershire Historical Society. The manuscript consists of 213 leaves, measuring 11x8 inches, written by one hand in the second half of the fifteenth century. The contents embrace about twenty different pieces, all Middle English prose. Most of them are preserved in other manuscripts, and have already been made accessible in printed form; but in every case the dialect and style of the Worcester manuscripts differ materially from other known versions. Then there are two or three important long pieces, which are otherwise unknown in Middle English versions. The first is the "Disciplina Clericalis" of Peter Alfonse, a collection of Oriental tales, composed in Latin by a converted Spanish Jew early in the twelfth century, which exerted a powerful influence upon mediæval, especially French, literature. The Statutes of Roger Niger, Bishop of London, 1229-1241, were originally composed in Latin, and a manuscript of the original is preserved in the Cambridge University library. But the Worcester manuscript contains, I think, the only known Early English version of this interesting and important episcopal document, which promulgated specific laws for the regulation and government of English religious and social life of the thirteenth century in all its phases. Following the Statutes in the manuscript we find the Constitutions of William de Courternay, Archbishop of Canterbury, 1381-1396, and of Archbishop Robert of Winchelsey, 1294-1313. Of well-known mediæval treatises the following are preserved in the Worcester Manuscript: "The Gospel of Nicodemus" (fragmentary); Richard Rolle of Hampole's "Libel of the Amendment of Man's Life or the Rule of Good Living"; "A Treatise Against Ghostly Temptations"; "Epistola Alexandri magni ad magistrum suum Aristotelem;" the Deeds (or Acts) of the Apostles (Purvey's translation); "The Book of Contemplation, or the Divine Cloud of Unknowing" (better known, perhaps, as "The Ladder of Perfection"); the Psalter in Latin and English (a fragment ending with Ps. 83, 18, probably by Hampole).

WM. H. HULME.

Cleveland, O., May 21.

ENGLISH IN RELATION TO OTHER STUDIES.

TO THE EDITOR OF THE NATION:

SIR: May I add one more word on the obligations of all teachers to the subject of English composition?

I quite agree with Professors Maurice G. Fulton, and H. P. Breitenhach, in your issue of May 21, that there is a good deal in the teaching of English composition that lies outside the interests and generally beyond the capacities of teachers of other subjects; but I think that their communications do not recognize the first problem that we teachers of English have to meet, viz.: the demand of the community that our pupils, whether in school or in college, shall be able to put their ideas in writing without exposing themselves to the suspicion of illiteracy. School committees, school superintendents, and headmasters would all admit, I think, that it is a disgrace to our system of education that large numbers of boys and girls graduate from our high schools with such outward and visible habits of illiteracy as bad spelling, abortive sentences, and senseless paragraphing. There is a minimum of correctness and freedom of expression, with which every child has a right to expect that he shall be equipped; that minimum many schools make little pretence of attaining.

When we look for the cause of this manifest failure of our school systems, there can be no doubt that it is in part to be found in the fact that teachers of other subjects condone illiteracy. If the public have a right to expect that their children's writing shall show that they have been to school, they must demand that all teachers besides being to some degree specialists in their subjects shall also use and enforce reasonably correct English.

It is important that the question of efficiency in the higher teaching of English should not obscure the more fundamental one of a minimum of literacy.

J. H. GARDINER.

Harvard University, May 24.

TO THE EDITOR OF THE NATION:

SIR: Two letters in the *Nation* on the teaching of English (March 19 and April 30) interested me greatly. Every effort to arouse teachers in other departments to a sense of their duty toward English is an effort in the right direction. Mr. Herbert L. Baker, however, in your issue of April 30, seems a little extreme in his position when he says:

> The practice of having various teachers on various subjects apply, by lecture or otherwise, the pouring-in process exclusively for days and weeks together, until the pupil has become more or less waterlogged mentally, and then sending him to another teacher to learn to pump himself out, seems a peculiarly abortive one.

In truth, is there a school in which this is done? Is there a teacher anywhere who continues "for days and weeks together" the "pouring-in" process, without the "pouring-out" process? Does not every teacher call for oral or written expression, or both, from his pupils at shorter intervals than the phrase, "days and weeks together" seems to indicate? The difficulty is that in many cases the teacher pays but little attention to correctness of form and mechanical structure, expecting the teacher of English to attend to that. Most teachers are to be censured, not for entire lack of expression on the part of the pupil, but rather for a lack of correctness and effectiveness of expression.

Mr. Baker continues:

> By fixing the attention upon form, to the neglect, if not the exclusion, of subject matter, this process involves a separation between the teaching of thought and the teaching of expression, which is hostile to both.

My objection to Mr Baker's position here is that he seems to assume that the student has nothing to express except that which comes from a class exercise. If this is true, the teaching of composition is absurd; but it is not true. To give an example from my own teaching: Last week I had a class of twenty boys and girls in second-year academy work write themes in exposition. They were to tell how they made something. Here more than in any other kind of composition they had an opportunity to use material they had gathered in other courses. Only one selected such a subject. One boy told how he made a porringer in the metal shop. All the other students selected subjects outside of class work. One told how he made a rabbit-trap—knowledge gained as a boy on the farm. Another told how he made a magic-lantern—an actual experience of early boyhood. These themes were much more interesting when read in class than if only processes with which all were familiar had been described. In a third-year class this subject was assigned for the students' first argument: "Examinations at the close of the quarter should (or should not) be abolished," the student to select the side he preferred. The efforts were crude (if they had not been, I should have known they were not original), but each student had his first opportunity of putting down in the form of written argument his own observation and experience upon a subject concerning which he had a very decided opinion—material that came from no text, that could have been gathered in no class, material that would never be used if each teacher looked after his own composition work.

Every person has a fund of thought which does not ordinarily find expression. One of the important duties of the teacher of composition toward the student is to have him formulate this inchoate material and express it clearly and sincerely. Often a student writes a theme more mature than his experience seems to warrant. On inquiry I frequently find that the subject is one which he has had in mind for a long time; one which did not come from a class exercise. Is such material as this—more truly the student's own than any other with which he deals—to be pushed into the background while he puts forth only what he gains from his teacher or his class work? Such a choking-out process discourages freshness and originality, and tends to make the student only the mouthpiece of others.

MARGARET McLAUGHLIN.

Peoria, Ill., May 23.

THE SHAKESPEARE QUARTOS.

TO THE EDITOR OF THE NATION:

SIR: In your "News for Bibliophiles" of May 21 you give some features of W. W. Greg's "bibliographical bombshell," contributed to the English quarterly, the *Library*. One of these seems to me to have very little weight, and it would not have been offered by Mr. Greg if due consideration had been given to the technique of wood-engraving and printing. This argument, as you sum it up, is as follows:

> All but one of the nine title-pages of these common editions contain a device with a Welsh motto. This device, originally the property of Richard Jones, was used by him frequently from 1593 to 1596, but, with the exception of these plays, it seems not to have been used again until 1610. . . . Mr. Greg reproduces side by side the same device printed from the same wood block as it appears in Dent's "Plain Man's Pathway," 1605, and in the Shakespeare quarto. The 1605 volume shows that the wood block had just begun to split, while in the book dated 1600 the crack has opened wider and the flaw becomes much more conspicuous.

From these facts Mr. Greg draws the inference that the quartos bearing the date 1600 must have been printed after 1605.

Bearing in mind that the wood block had been used from 1593 to 1596, let us suppose that it had begun to split after being used in 1596, but that the printer had not taken the trouble to repair it, and had used it in the quartos of 1600 just as it was, for these quartos were probably produced as cheaply as possible. In these quartos the split or crack is quite prominent, but in 1605, when they came to use the block in Dent's book, the split had opened so that the block was no longer available without repair. They therefore resorted to a very common device; they bored one or more holes horizontally through the block, and through each hole they passed an iron bolt with a screw and nut on the end, and in this way they actually made the block better than it was in 1600. I have seen this done hundreds of times in the days before process work superseded wood engraving, and the method is so simple and obvious that it would naturally occur to any intelligent mechanic.

In this connection it might be well to ask if we have any evidence that Pavier cared anything for the dates of his quartos. To us dates are exceedingly valuable in relation to old books. A genuine first folio with a genuine date of 1622 would bring an enormous price; would it have brought as much as a copy with the date 1623 if it had been offered for sale in 1624? I think not. And so in 1619; would not copies dated 1619 bring more in that year than copies which had been issued in 1600? What was Pavier's object in falsifying these dates?

JOHN PHIN.

Paterson, N. J., May 22.

A SUGGESTION TO MAKERS OF GERMAN GRAMMARS.

TO THE EDITOR OF THE NATION:

SIR: So far as I know, all German grammars issued in this country represent the pronunciation of the name of the German letter *j* with the symbol *yot*. Is this transcription as accurate as it might be? I suppose, to be consistent, we should have to give the vowel *o* of this symbol the same value we find in words like *not*, *cot*, *blot*, whereas the name, as properly pronounced, seems to me closer to the sound-picture *yut*. To avoid any possible contamination with the *ut*-sound in *put*, it might be well to transcribe the name of the letter with the symbol *yutt*, thereby insuring the vowel-sound which we have in *butt*. The Muret-Sanders Dictionary represents the vowel-sound in question with a short German *o*, which is by no means identical with the short English *o*. It is, however, quite the same vowel we find in the German words *Gott*, *Spott*, *flott*, when properly pronounced.

C. H. IBERSHOFF.

Cornell University, Ithaca, May 27.

THE VICE-PRESIDENCY.

TO THE EDITOR OF THE NATION:

SIR: Our country has had a long and severe object lesson on the importance not only of having the President the best man available for the highest official position, but also of having the Vice-President the next best man for that position. We have had three Presidents assassinated within fifty years, and there are many other chances of a Vice-President becoming President. Yet we give the maximum of interest to the Presidency and the minimum to the Vice-Presidency, although the President-elect might die or be incapacitated between election and inauguration. We should change all this, if we wish gradually to raise the standards of our national government to those of well-managed private corporations.

ROBERT S. MINOT.

Boston, May 25.

Notes.

The Cambridge University Press (G. P. Putnam's Sons) will publish two volumes of lectures delivered by the late Prof. F. W. Maitland. One of these is from a course on "Constitutional History," and contains a survey of the Constitution at times dated by the deaths of Edward I., Henry VII., James I., and William III. The other volume is from a course of lectures on "Equity Law."

In this connection we may mention a slender volume from the Oxford University Press, containing two lectures on the life and work of Professor Maitland, by A. L. Smith of Balliol College, with a bibliography of Maitland's works.

David Nutt is about to issue volumes VIII. and IX. of Keating's "History of Ireland," edited by the Rev. P. S. Dinneen. This will complete the publication of a work which was begun by the Irish Texts Society in 1901.

Jacobs & Co. will soon have ready two books by T. H. S. Escott, the editor of the *Fortnightly Review*. One deals with "King Edward VII. and His Court," the other is "The Story of British Diplomacy."

From Harper & Bros. comes the news that Swinburne, since publishing "The Duke of Gandia," has been engaged in the final revision of what he regards as his greatest prose work, "The Age of Shakespeare."

Beckles Willson of Quebec House, Westerham, Kent, has already in hand 140 unpublished letters of Gen. Wolfe, whose life he is writing. He would be pleased to hear of any further new material bearing on his subject.

The prefaces to Volumes IX. and X. of the New York edition of Henry James's "Novels and Tales" continue his account of the conditions under which he wrote and the objects at which he aimed. Volume IX. contains "The Awkward Age," which was projected as a short story, but which illustrates "the quite incalculable tendency of a mere grain of subject-matter to expand and develop and cover the ground when conditions happen to favor it." The novel was published serially in *Harper's Weekly*, in 1898. After it appeared in book form the publishers told Mr. James: "I'm sorry to say the book has done nothing to speak of; I've never in all my experience seen one treated with more general and complete disrespect." Volume X. is made up of three tales which succeeded in being shorter: "The Spoils of Poynton," "A London Life," and "The Chaperon." The germ of "The Spoils of Poynton" was, Mr. James informs us, a casual hint, "dropped unwittingly by my neighbor, a mere floating particle in the stream of talk." This particle was a remark about "a good lady in the north, always well looked on," who was "at daggers drawn with her only son, always hitherto exemplary, over the ownership of the valuable furniture of a fine old house just accruing to the young man by his father's death." Of the second story Mr. James says:

> "A London Life" would probably consort . . . with a dozen of the tales by which I at one period sought to illustrate and enliven the supposed "international" conflict of manners; a general theme dealing for the most part with the bewilderment of the good American, of either sex and of almost any age, in presence of the "European" order.

But he admits that the story breaks down altogether "as a contribution to my comprehensive picture of bewildered Americanism." The story would have been in essence the same without the American flavoring. In discussing "The Chaperon," Mr. James offers us this suggestive generalization, which offers a key to not a little of his writing:

> A short story, to my sense and as the term is used in magazines, has to choose between being either an anecdote or a picture, and can but play its part strictly according to its kind. I rejoice in the anecdote, but I revel in the picture; though having doubtless at times to note that a given attempt may place itself near the dividing-line. This is in some degree the case with "The Chaperon," in which, none the less, on the whole, picture ingeniously prevails.

"Discipline and contemplation," says Henry Dwight Sedgwick in "The New American Type and Other Essays" (Houghton, Mifflin & Co.)—"discipline and contemplation bring life to that ripeness which is the foundation of happiness, of righteousness, of great achievement." The words might be taken as the text of his book. They are the key to his comparison of the new American face with that of Washington's day, which forms the title essay; they are the sting of the following essay on "The Mob Spirit in Literature," and of the preaching to the end of the volume. Preaching, we say, for here and there, as in his comments on "American Colleges," Mr. Sedgwick passes from the style of the essay to that of the pulpit, and his ethical intention is everywhere evident. But the moral is good, and the manner entertaining; he has mingled the sweet and the profitable with commendable cunning.

In "The Schoolmaster" (G. P. Putnam's Sons), A. C. Benson puts into practice a theory of his that if only people wrote naturally about what they best understand they would be genuinely helpful. The book carries a faint suggestion of "The Parent's Assistant," and belongs to the *vade mecum* variety. It presents the advice and opinions of one who has himself been for twenty years a master at Eton, and, needless to say, presents them readably. The book appeals chiefly to the English rather than to the American schoolmaster, and that is probably the reason it is only now published in this country; in England it appeared six years ago. But, though we have no Etons here, we have many schoolmasters who tend to fall into ruts, and who may receive from Mr. Benson's suggestions a new glow of enthusiasm.

The most remarkable feature of the Highways and Byways Series, published by the Macmillan Co., is that so many volumes written by different hands should preserve such unity of tone, and, we may add, such uniformity of excellence. The latest volume, "Hampshire," by D. H. Moutray Read, is in the well-known vein midway between the guide book and personal reminiscences of travel, only carrying the permitted discursiveness of the series a little further than usual—perhaps a little too far. If the keys of a chapel are not readily forthcoming, Mr. Read jauntily passes—probably it contains nothing worthy of comment, anyhow. He treats you as if he were conducting you through his own estate, and took pleasure in pointing to this and that which he values for his own reasons. The result is entertaining. There are important cities and institutions in Hants—Southampton and Portsmouth and Winchester and Aldershot—but on the whole the literary associations are not of the first importance. The illustrations, by Arthur B. Connor, are in Joseph Pennell's manner, but are less satisfactory in the landscapes than in the glimpses of old houses.

As a supplement to J. A. R. Marriott's excellent life of Viscount Falkland (reviewed in the *Nation* August 1, 1907, p. 103) we are glad to call attention to a reprint (E. P. Dutton & Co.) of John Duncon's "Lady Lettice, Vi-countess Falkland," edited by M. F. Howard. When in 1639 "her dear lord and most beloved husband, that he might be like Zebulon (a student helping the Lord against the mighty), went from his Library to the Camp, and from his Book and Pen to his Sword and Spear," Lady Lettice was left behind with her mother at Great Tew, to sorrow and wait—and wait in vain. With the rashness of a contemplative man driven into furious action, Falkland threw away his life at Newbury in 1643. It is not hard to imagine the consternation that fell upon the household at Great Tew. From that time the bereaved wife gave herself up daily more and more to the mortifications of a religious life. She was confirmed in this practice by the death of her youngest and dearest son in 1645; her own release came the next year, at the age of thirty-five. A little before her death, her chaplain, John Duncon, had written out for her comfort a series of devotional exercises, in the form of letters from her with his replies. It is probable that those under her name represent the burden of her actual conversation with him, and it is certain that they were revised under her direction. These were published in 1648, and to a second edition (1649) Duncon added a biography of the lady in the form of a letter to her surviving mother. It is this biographical letter that we now have in a reprint, with extracts interspersed from the rest of the correspondence. There is altogether too much pious ejaculation and too little narrative in the good chaplain's memorial, but through all his religious platitudes there shines the image of one of those beautiful and unworldly women of the seventeenth century, a companion to the mother of George Herbert, to the wife of Col. Hutchinson, to Lady Fanshawe, and to how many others whose names sweeten the memorials of those turbulent years. There is something of the savor of Little Gidding in the management of Great Tew. Indeed, one of Duncon's brothers had been sent from the Ferrars to George Herbert's deathbed in 1633, and was entrusted with the poet's manuscripts; it is likely that John Duncon had personal acquaintance with Little Gidding and influenced Lady Falkland to follow it as a model. We seem to read the secret of her devotions in her own words: "Oh, I have had my portion of these very comforts with the first; no woman more; but there is no lasting or true pleasure in them: There is no real comfort from any espousals, but from those to Christ." Elsewhere, commenting on her renunciation, the biographer adds:

> It sounded very harshly to some of her dearest friends when she said, "Oh, love me not, I pray, too much!" until she added, "and God grant I never love my friends too much hereafter, that hath cost me dear, and my heart hath smarted sore with grief for it already."

The title of "The Curse of the Romanovs," by A. S. Rappoport (the McClure Co.) hardly suggests serious history; and yet the book is intended to be serious, as the reader sees when he has got far enough along, and has learned what to overlook. Some of the chapter headings would do for a yellow journal; for instance, "The Birth of a Tyrant," "Love in a Palace, or, The Love Letters of a Princess," "A Modern Caligula," "Finita la Commedia, or, The Mysterious End." The first chapter, "From the Colosseum to the Kremlin," is turgid rant; but after that matter and manner begin to improve. The author, if not sympathetic, is at least no longer obviously unfair, and he has used standard authorities. The result is an interesting, if not a very original, account of the private life of the unfortunate Russian Emperor Paul, and of the early years of Alexander I. Paul, who was none too normal, even before his accession, was dangerously out of his mind in the later part of his reign. Great as his mother's sins against him may have been, we cannot blame her for wishing to pass him over. and to transmit the Imperial crown directly to her grandson. But for the sudden death of the Empress, this step would probably have been attempted. Of course, Mr. Rappoport has little tenderness for any Romanov, and he finds Alexander guilty of at least connivance in the murder of his father. Mr. Rappoport does not say, however, what other course the heir to the throne should have followed under the extraordinary circumstances in which he found himself. His liberty, if not his life, and those of his brother and mother were threatened by the jealous suspicion of a madman, who had already caused wanton suffering to thousands of innocent people, and who was not only making life unbearable to those about him, but was plunging the empire into disastrous war. That madman was an absolute sovereign, who could only be removed by force. Can we blame Alexander for having consented to the measure? He took what precautions he could by obtaining a promise that his father's life should be spared; and, though the promise was not kept, the parleying between the conspirators and the Emperor Paul, when they had him in their power. would seem to show that they had no immediate design of assassination, but were hurried into it by fright at the tumult outside. Alexander's horror when the news was brought to him, and his life-long grief at his share in the tragedy are testimonies not so much to his guilt as to the tenderness of his conscience. At the worst, we can only accuse him of a knowledge that a fatal outcome was possible. As Mr. Rappoport goes on he judges Alexander more leniently.

In an essay entitled "Safed in the Sixteenth Century," the most important of his "Studies in Judaism, Second Series" (Jewish Publication Society), Dr. S. Schechter, president of the Jewish Theological Seminary, introduces us to a little world, strange and unreal, brought into being by the combined forces of persecution and of the curious philosophico-religious movements that agitated Judaism at the close of the middle ages. Here, in the highlands of Galilee, a community sprang up devoted to a holy and spiritual life. Its austerity was relieved by the almost ecstatic joys which the teachings of the great masters of the law and of the Cabbala afforded, as well as by the sunshine of the Sabbath, which was venerated and welcomed as Queen Sabbath. In the sixteenth century Safed was large and prosperous, its population being made up largely of Jews who had been driven from the Spanish dominions and Portugal, or who had come from northern Africa and other Mohammedan regions. There were as many as eighteen Talmudic schools in this city, which, under such sages as Caro and the Cabbalists Cordovero and Loria, became the centre of learning in Palestine. Dr. Schechter asserts that "there can be little doubt that no place in Jewish history since the destruction of the Holy Temple could point to so brilliant a gathering of men." The author gives us interesting glimpses of the "simple life" of the people of Safed, where everybody "attended to his own domestic work." The decline of Safed began about the beginning of the seventeenth century. Although still one of the largest towns of Palestine, it lives in the memories of its past. An earthquake in 1837 destroyed several thousands of its inhabitants.

Frederick McCormick's letters from Manchuria, where he made the campaigns of 1904-05 with the Russian armies, have been reprinted in two volumes by the Outing Publishing Company, under the title, "The Tragedy of Russia in Pacific Asia." There are many chapters in the book that are as clumsy as the title, not least among them the opening chapters on political conditions in the Far East and the causes that brought on the war. The narrative here is often obscure, ill-connected, largely speculative, and carries in consequence no large sense of authority. A good deal that is elementary even to the ordinary reader is presented in unnecessary detail, and much that even the specially equipped reader does not know is taken for granted. Mr. McCormick gives evidence of satisfactory acquaintance with the material side of his subject—that is, the country, the language, the nature of the people, and the military events he was there to chronicle. It is, perhaps, nothing against the author that some of his battle descriptions convey no distinct impression of unity. That is often the defect of the minute narrative of an eye-witness, who can see only part of the engagement. On the other hand, the story of the Russian retreat from Mukden is a magnificent piece of descriptive writing, all the more successful because there is no striving in it after the effect that is to be obtained by mere words. Evidently Mr. McCormick was carried away in spirit, as he was actually in body, by the fugitive torrent that broke from Mukden and poured in panic sixty miles without rest to Tie-ling in the north. Here the writer has done more than describe vividly: he has actually realized. The illustrations, consisting of photographs and sketches by the author, are admirable.

The demand within a year for a second edition of Prof. Mary Whiton Calkins's admirable book, "The Persistent Problems of Philosophy" (The Macmillan Co.) is a merited recognition of its serviceableness to students and teachers of philosophy. It was necessary, Professor Calkins states, to make the new edition ready at a few days' notice. It contains, consequently, few changes, and these are not numerous or extensive enough to alter the original paging of the book. They involve no important modifications of doctrine, but are made chiefly to secure greater accuracy and clearness of statement on some of the more disputed points in the opinions of modern philosophers. The new edition calls, therefore, for no new critical comment

"Studies in Chaucer's 'House of Fame'" (published for the Chaucer Society by Kegan Paul, French, Trübner & Co., London), by Wilbur Owen Sypherd, professor of English in Delaware College, is the most comprehensive work on the sources of this poem which has yet appeared. We do not believe in the main thesis of the book, viz., that the poem is a love-vision and owes its conception to contemporary French poems of that character. Nor do we believe that Chaucer's work has any "meaning" beyond what lies on the surface. In our judgment he aimed simply at working out his allegorical conception of Fame and her dwelling-place, and, if he is somewhat slow in reaching this central conception, no one need be surprised at this in a mediæval poet—all the less so in this instance, as the world has found the preliminary stages of Chaucer's journey, on the whole, very agreeable. Notwithstanding these objections and some others—such as the author's acceptance of Professor Lowes's early dating of the poem—he has given us a very instructive as well as very detailed study of the sources. He rightly insists on the influence which the mediæval conception of Fortune has had on Chaucer's Fame and her house. Interesting is the parallel of the Rock of Ice on which the House of Fortune rests in the "Panthère d'Amours." The suggestion that Chaucer's wattled House of Tidings is derived from the Old Irish wicker houses is a novel one, and may well furnish the solution for this feature of the poem.

The portion of the Bosworth-Toller Anglo-Saxon Dictionary, for which Dr. Bosworth alone was responsible, has always borne an evil reputation among scholars and the authorities of the Clarendon Press from the beginning promised, after the completion of the work, a supplement which should correct the deficiencies of this first issue. The first section of the promised supplement (Henry Frowde), extending from A to Eorth, and prepared by the competent hand of Prof. T. N. Toller, has now appeared. It is a pity that the old issue of Dr. Bosworth's work was not cancelled altogether and an entirely new treatment of this part of the Anglo-Saxon vocabulary entrusted to Professor Toller. As it is, one has to look through both the original issue (with all its inaccuracies) and the supplement, to settle the meaning of a word. The supplement contains many words not included at all by Dr. Bosworth, but more frequently merely additions and corrections to articles by him. How thorough-going the changes are will appear from a comparison of the number of pages in the two—192 in this section of the supplement corresponding to 255 in the original work. Notwithstanding the drawback mentioned above, this dictionary will remain indispensable to all students of Anglo-Saxon, especially on account of its abundance of illustrative quotations. On comparing it with some of the numerous treatises on special branches of the Anglo-Saxon vocabulary like those of Jordan, MacGillivray, and others, one still observes now and then the omission of a rare word, such as ealfara (beast of burden), benne (reedgrass), ealdfaeder, in the sense of "patriarch," etc. Such omissions, however, do not seriously detract from the usefulness of this important work.

A work which promises to be of great

interest to students of Danish literature is entitled "Tider og Typer" (Epochs and Types of the History of Danish Genius), by Dr. Vilhelm Andersen. The author, one of the ablest of the younger generation of Danish critical writers, has just been appointed a professor of literature in the University of Copenhagen. The plan of the work is ambitious. The volume now published (Copenhagen and Chicago: Gyldendal Publishing Company) as the first of the first series, which is to be devoted to humanism, covers the humanistic phases in the development of Danish genius from the earliest specimens as represented by Saxo Grammaticus down to the time of Holberg, a period of about 500 years.

Dr. Lydia Wahlström's biography of Erik Gustaf Geijer (Stockholm: Norstedt) is based on much new material, especially his own early letters and still unpublished documents, which are the basis of the treatment of Geijer's relations with Hans Järta before and after Geijer's desertion from the conservative ranks. This side of Geijer's life is treated with more fulness than the rest, and rightly; for the sight of a truly conservative man, a scholar and politician of high rank, who abandons his early associates and allies himself with former adversaries, who puts himself virtually outside the pale, because the logic of events has compelled him to change his views, is a rare one.

Prof. Friederich Paulsen, of Berlin, publishes in the *Internationale Wochenschrift*, No 15, an interesting paper "Der nationale Charakter der höheren Schulen Deutschlands und die Grundtendenz der jüngsten Schulreform." He discusses fully the reforms now being planned for the nine-year courses in all three types of secondary schools, the classical *Gymnasia*, the semi-classical *Realgymnasia*, and the scientific *Oberrealschule*. Paulsen favors a division of these schools into two institutions, largely after the manner, as he himself states, in which the work done by them is in America divided between the high school and the college. He further urges the introduction of a limited elective system in all the higher classes. Professor Paulsen has also recently published through Reuther & Reichard, Berlin, a discussion of the sex problem from the pædagogical point of view, entitled "Moderne Erziehung und geschlechtliche Sittlichkeit," with the sub-title "Einige pädagogische und moralische Betrachtungen für das Jahrhundert des Kindes." The same firm announces a third and fourth *stark vermehrte Auflage* of Professor Paulsen's "Philosophia Militans, gegen Klerikalismus und Naturalismus."

It is not often that a professor of mathematics turns aside from his specialty, as Prof. L. Pochhammer, of Kiel, has done in his "Zum Problem der Willensfreiheit: eine Betrachtung aus dem Grenzgebiet von Naturwissenschaft und Philosophie" (Stuttgart: Max Kielmann). The author opposes monism, and insists that it leads to fatalism. He finds in man's mind powers which he calls supermaterial, and declares that these coöperate with the powers of nature in the production of activities.

"Napoleon-Anekdoten," by G. Kuntze (Stuttgart: Robert Lutz) consists of two volumes of anecdotes and stories. The effort has been to select only those which are authenticated and which characterize the man and his work.

The new series started by the two Leipzig historians, Professors Erich Brandenburg and Gerhard Seeliger, under the title Quellensammlung zur deutschen Geschichte (Leipzig: B. G. Teubner) begins with a work of 260 pages by Johannes Haller, "Die Quellen zur Geschichte der Entstehung des Kirchenstaates." Only the sources are given, but these fully and fairly, on this controverted matter.

The Verein der Bücherfreunde, since its organization in 1891, has published, in attractive form and at a low price, 128 volumes, in 16 series of 8 volumes each, of belles-lettres, chiefly fiction, science, biography, and the like, exclusively from modern writers. A seventeenth series is now announced of which "Kiautschou: Deutschlands Erwerbung in Ostasien," by Weicker, is the leading attraction. Among the other works will be novels by Hans Fischer, Ottomar Enking, and Georg Neudeck, and the story of the life of Queen Elizabeth Christine of Prussia by Eufemia von Aldersfeld-Ballestrem. The publisher is Alfred Sokall, Berlin.

Prof. Friedrich Delitzsch has published through the J. C. Hinrich'sche Buchhandlung, Leipzig, a small work entitled "Mehr Licht; die bedeutsamen Ergebnisse der babylonisch-assyrischen Grabungen, für Geschichte, Kultur, und Religion." The topics considered are demonology, angelology, and satanology. Data merely touched on in the author's "Babel und Bibel" are here enlarged. The work is well illustrated.

Dr. Adelbert Düringer publishes through Veit & Co., Leipzig, "Nietzsche's Philosophie und das heutige Christentum." Nietzsche's criticisms of Christianity are declared to be the outcome, not of reason and logic, but of prejudice.

J. C. B. Mohr, Tübingen, announces for the spring of 1910 a third edition of the scholarly translation of the Old Testament, known as "Die Heilige Schrift des Alten Testaments," translated by Prof Emil Kautzsch in conjunction with Professors Budde, Guthe, Höllscher, Holzinger, Kamphausen, Kittel, Löhr, Marti, Rothstein, and Steuernagel. This edition will be a practically new work. Not only has the translation been thoroughly revised, and the literary apparatus been doubled, but brief commentaries will accompany every book. It will present in one volume, in translation and interpretation, the results of modern Old Testament research.

The reports from the headquarters of the German book trade in Leipzig state that during 1907 there were exported from Germany to foreign countries 42,012,520 volumes. Austria heads the list; and the next in order are Switzerland, Russia, and the United States.

The annual report of the British and Foreign Bible Society, just published, is more encouraging than for several years. Three new versions have been added to the society's list, making a total of 412. European immigration into North America has increased the demand for Testaments in which English is printed side by side with one or other of a dozen Continental versions. Of the issues for the year of 5,688,381 volumes, over one million were sold in China, while in Korea, Testaments could not be supplied fast enough to meet the demand. The year's income amounted to a little over a million dollars.

The Harvard Library has received another large addition to its Risorgimento collection. This accession, consisting of about seven hundred volumes and pamphlets, is in part the gift of H. Nelson Gay and in part bought from library funds, but all the pieces were selected by Mr. Gay in Rome. Another shipment, now on the way from him, will contain about a thousand items, partly on this same subject and partly of a miscellaneous character. Most of these were bought by Mr. Gay at the recent sale of the library of Crispi, in Rome.

A notable addition has recently been made to the Chinese department of the Cambridge University Library, the nucleus of which consists of the gift of Sir Thomas Wade of the collection made by him during his forty years' residence in China. Several important *lacunæ* have been filled up. The library already possessed the gigantic anthology of the T'ang dynasty (A. D. 618-903), which contains over 48,900 selected poems; and now to this has been added a similar collection of the prose works of the same period, filling 401 volumes. There is also a rare encyclopædia in 120 volumes, which was compiled in the thirteenth century. Good editions of some of the best novels have been secured, and several collections of essays on light and interesting topics.

The eighth meeting of the Bibliographical Society will be held in conjunction with the American Library Association at Lake Minnetonka, Minn., June 24-25. The following papers will be presented: Report from the Committee on Americana, "A Preliminary Statement Regarding Materials for the History of the Scandinavian-American Press," by J. C. M. Hanson, Library of Congress; "Manuscript Hunting," Dr. E. C. Richardson, Librarian of Princeton; illustrated lecture, "Instruction in the Book Arts in Public Schools," Miss Gertrude Stiles, Chicago; "Lincoln Collections and Lincoln Bibliography," the Hon. Daniel Fish, Minneapolis; "Library Catalogue of the Future," H. W. Wilson, Minneapolis.

Dr. Louis Fréchette, the French-Canadian poet, died in Montreal May 31. Born at Levis, in the province of Quebec, in 1839, he was educated at Laval University and Nicolet College. After admission to the bar, he lived in Chicago for seven years. Then returning to Canada, he was elected to Parliament from Levis and practised law. Since 1889 he had been clerk of the Legislative Council, Quebec. For some years he was active in journalism; he edited *Le Journal de Québec*, *Le Journal de Levis*, *L'Amérique* (Chicago), and *La Patrie* (Montreal). Among his volumes of verse are "Mes Loisirs" (1863), "La Voix d'un exilé" (1869), "Pêle-Mêle" (1877), "Les Fleurs boréales" (1880), "Les Oiseaux de neige" (1880), "La Légende d'un peuple" (1887), "Les Feuilles volantes" (1891), and "Veronica," a drama. His prose writings include "Lettres à Basile" (1872), "Originaux et détraqués" (1893), "Lettres sur l'éducation" (1893), "Christmas in French Canada" (in English), "Le Noël au Canada" (1900), and translations of W. D. Howells's "A Chance Acquaintance" and George

W. Cable's "Old Creole Days." Several of his writings were crowned by the French Academy.

Ernesto Masi died in Florence on May 17. He was born in Bologna in 1837, and after the unification of Italy he played an important part in organizing the national system of education. He had been for many years professor of modern history in the Istituto di Studi Superiori at Florence, and was widely known for important historical studies and critiques. Besides volumes entitled "Studî e Ritratti," "Nell' Otto Cento," "The Two Wives of Napoleon I.," he published essays on Savonarola, Gozzi, Alfieri, Goldoni, and the Burlamacchi, and edited the memoirs of Ranalli. We took occasion not long since (August 22, 1907, p. 165), to commend his remarkable brief analysis of the Italian Risorgimento, with a critique of the bibliography of the period. Although a Romagnole, he had as a writer much of the keenness, wit, and irony which are believed to characterize the Tuscan intellect.

MODERN FRANCE.

Contemporary France. By Gabriel Hanotaux; translated from the French. Vol. III., 1874-1877. New York: G. P. Putnam's Sons.

This third volume of M. Hanotaux's history fully sustains the interest of the two which preceded it. The first covered the ministry of Thiers. It described France rising from the abyss into which the war of 1870-71 had plunged her, and recovering her self-confidence all the faster from the undaunted spirit of the ardent and energetic little man whom the emergency had called to the helm. The second volume was chiefly filled with the long and complicated struggle between the four parties which divided France over the question of the form of government. At the beginning the Legitimists, possessing the most numerous following in the Assembly, seemed destined to succeed in placing the Count of Chambord on the throne of his ancestors as Henry the Fifth. But the magnificent obstinacy of that prince, who refused to assume the crown except upon his own terms, one of which was the substitution of the white flag of the old monarchy for the tricolor, foiled the efforts of his friends. Marshal MacMahon was installed as President for seven years, and the fact that he was installed as President of the republic, if it did not absolutely negative, yet practically discountenanced the theory that the whole proceeding was only tentative. But it did not prevent the Legitimists from still hoping to secure the reëstablishment of a monarchy, and continuing to work in that direction.

The republic, however, was still little more than a name. It was necessary to give it a Constitution. The creation of that Constitution, with the beginning of a regular responsible government under it, is the theme of the present volume. Some pages are devoted to an account of the military and financial measures of 1875, and a full account (the more interesting because partly based on unpublished documents) is given of the relations of France and Germany, culminating in the famous "war scare" of 1875, which is here represented as having been deliberately organized by Bismarck. The diplomacy of the Duke Decazes met this anxious time with firmness and a good deal of skill; but the chief credit for inducing Bismarck to disavow hostile intentions and for restoring a measure of tranquillity to Europe is awarded to the Czar Alexander II. In this view M. Hanotaux seems to be right; but it may be doubted whether he does not do less than justice to the efforts for peace made by Great Britain, his animosity to which Power is scarcely concealed. The incident had an importance even greater than was seen at the time. It was the first conspicuous instance of the tendency towards a *rapprochement* between Russia and France which Bismarck always sought to avert, and which issued long afterwards in the Dual Alliance.

Apart from these matters, practically the whole of this volume is occupied with a narrative of the parliamentary conflicts of 1875 and the two following years. The story is told in much detail and with great spirit. Many were the alternations of fortune, many the combinations of groups of Deputies made and dissolved and remade. Notable was the parliamentary skill displayed by such leaders as Audriffet Pasquier, Buffet, Raoul Duval, Jules Simon, Dufaure, the Duke de Broglie, Gambetta himself. Much of the interest of the story lies in the characters of the principal actors, some of which have been sketched with finished art by M. Hanotaux. More than any one else, Gambetta is his hero. But he presents us with other well-drawn portraits. One is of Louis Buffet, the man of authority, whose temperament drew him to the Monarchists though he had professedly become rather a Republican than an Orleanist, a stiff, conscientious, unaccommodating man, trusted because he was known to be honest, but not liked; excellent in opposition, but too sensitive and too individual to be a good head of a Ministry. Another of Henri Wallon, a well-known professor and learned author—his "Histoire de l'esclavage dans l'antiquité" is still a book of value—is equally lifelike. None of these men, however, except Gambetta, won permanent fame outside of France. Few of them are now remembered even there. The main interest of the story lies in the singular process by which there was created a republic which has now lasted twice as long as any other form of government France has had since 1792, and which has so often escaped the dangers that threatened it as to seem now more likely to last than any one believed when it was founded. Its foundation came about by three causes, none of which could have been predicted. One was the inconceivable folly of the Count of Chambord. Another was the conscientious loyalty of Marshal MacMahon. The Marshal was himself a Monarchist. His wife was an earnest Catholic. But he was too upright a man to override the law and resort to the *coup d'état* towards which many of his Monarchist friends tried to push him. The third cause was the mutual suspicion and jealousy of the three monarchical parties. The Legitimists and the Orleanists, though secretly distrustful, each of the other, often worked together. But both hated the Bonapartists; and the Orleanist princes would appear to have been led by their fear of Bonapartism into negotiations with the moderate Republicans, which at a critical moment greatly aided the cause for which the latter were working. The singular zigzags by which the National Assembly approached nearer and nearer to a republican Constitution, at last dropping half unconsciously into it, are dramatically described by our author. "Do not seek for the principles which guided us: chance alone was our master," is the phrase which he suggests as the one the makers of that Constitution would have used to characterize their action. "The Assembly," said J. J. Weiss, "spent its years in dreaming of a monarchy, while realizing a republic." The Duke de Broglie, himself a collaborator, observed: "Everything in the law of 1875 bears the trace of an assemblage of irreconcilable elements, made with unthinking haste, with a view to transitory concord." Nevertheless, this Constitution, which did not even call itself a Constitution, has lasted (though somewhat altered), and lasted when a more elaborate and systematic instrument might have been overthrown.

Mr. Hanotaux dedicates eighty pages to a review of French constitutional history since 1789, and makes some interesting reflections on the currents of French thought which have during that period been flowing, now in one direction, now in another, yet which have always been distinctly and distinctively French. He shows how often the pendulum had swung back and forth; how men had fallen back on monarchy in the person of Napoleon, because terrified by the excesses of democracy; how the constitutional monarchy of July failed because it was based on a very limited suffrage which excluded the bulk of the nation; and how the empire of Louis Napoleon fell because after it had alienated the people by its corruption and its failures, it had in the consciousness of its own unpopularity brought itself into contempt by trying to assume the trappings of liberalism. After its fall, the leading men of wisdom in France, apart from the fanatics of legitimism on one side, and the fanatics of socialism on the other, felt that safety lay, for the time, at least, in a middle course, either a constitutional limited monarchy, like that of England, or else a carefully restricted and wisely tempered republic. The former alternative might have prevailed had there been an obvious person to choose as constitutional king. But the Count of Chambord had made himself impossible, and was excluding the Count of Paris also, so there emerged a republic conservative except in one point. It was a momentous point. It was universal suffrage. Most of the assembly disliked it, but they were swept towards it by a sort of "stream of tendency" which they could not resist. A limited suffrage had led to the fall of Louis Philippe. Universal suffrage offered what seemed a solid footing, because it was the bottom, and you could fall no further. Those who feared it, sought to limit its working partly by the institution of the Senate, partly by the large measure of authority which seemed to attach to Marshal MacMahon in respect of his election for seven years. There was in some minds a scarcely concealed hope that before the seven years had ended, he would establish a monarchy. But as the constitution made, not the president, but his ministers, responsible, following the Cabinet system of England, MacMahon found himself obliged to bow to the will of the electors expressed through the chamber. Parliamentarism prevailed. It has ruled France ever since, and latterly has in so far ruled better that there has been less oscillation of opinion, and more continuity of policy.

In M. Hanotaux's hands not even questions of constitutional law are dry. His views do not always seem to us correct, and his references to the United States show some want of knowledge. But about the actual French system he writes with the full comprehension of one who has been in the middle of it all, and a part of it, and his personal acquaintance with many of the prominent actors adds a further sense of reality. The book is interesting from beginning to end.

The Pleasant Land of France. By Rowland E. Prothero. New York: E. P. Dutton & Co. $3.50 net.

The title of this volume gives a semblance of unity to seven sketches and studies, ranging over agriculture, folklore, history, and literature, with the one common attribute of an all but exclusive bearing on provincial conditions of life and thought in France. Most important are two practical discussions of French farming and tenant-right, together with an elaborate contribution to the appreciation of Rabelais.

Of farming in France, Mr. Prothero justly claims wide knowledge, for the facility of his references to its extreme variety points to the kind of familiarity which marked the work of Arthur Young. Contrasting agriculture in England and France, the author gives an interesting demonstration of the causes which have tended to the production of fundamental differences in the practice of the two countries: the self-sufficing country, with all sorts of soil and climate, from the Belgian frontier to the Mediterranean, naturally fails to compete in certain specific lines with its less versatile, but more concentrated, neighbor across the channel. There enters also the potent factor of population, virtually stable in France, while increasing rapidly in England. Incidentally, the discussion takes up the claims of large and small ownerships, the *métayer* system, and concludes with a plea for the facilitation of peasant-proprietorship. In the next equally readable essay there is presented a sketch of the relations between owner and tenant in one or two French provinces, with a singular account of agrarian outrages resulting from neglect or violation of peasant feeling, instances of which are said to have occurred in Picardy within memory of living men. Still, any suggestion of conditions even remotely resembling Irish or Sicilian unrest must be misleading.

Mr. Prothero's treatment of Rabelais offers an interesting contrast to the recent study by Charles Whibley, among the prefaces to the Tudor Translations. The latter article emphasized chiefly the personality of the great satirist, in the tone and humor of Paul Stapfer's now classic study; Mr. Prothero lays stress on the substance and significance of Rabelais's teaching, and takes a middle course between the two conventional views which, respectively, portray him as a gross and ribald buffoon, or endeavor to find an exalted scheme of thought under the apparent confusion and license, whether of idea or of expression. The interpretation of the hidden meaning contained in the oracle of "La Dive Bouteille" is by no means new or original. Most of the contentions here advanced are amply familiar to French Rabelaisians. It is surprising to find not even a distant allusion to the Odyssean character of the wanderings of Pantagruel. As to the more broadly liberal aspect of some of the ecclesiastical and religious tenets hazarded in the famous romance, it would have been well to suggest that doubts have been cast on the genuineness, here and there, of the text.

CURRENT FICTION.

The Stage Door. By Charles Belmont Davis. New York: Charles Scribner's Sons.

This book exerts a fascination deserving analysis. The ten stories of Bohemian New York which constitute the volume gain greatly by their association. No one of them alone strikes the reader as really distinguished work; taken together, their unity of intention and effect is impressive. The author aims, if not always triumphantly, at a detached point of view; at his best, he makes us feel that the thing happened so—precisely so. At his worst, he is occasionally led astray into the cheaply sentimental or fanciful. Noticeably, he makes no capital of the shady possibilities of the material; there is nothing to excite the most careful ears. The plots are, in general, slight and not particularly ingenious. The familiar characters are drawn with no unusual power—half-successful singers, reporters, actresses, playwrights, singularly poor in emotion and unburdened by sense of sin. Yet there is a charm, surely not intrinsic, in this world of beer and smoke, of bachelor apartments, frumpish boarding-houses, and Bohemian restaurants, in the circle of the footlights, and the glamour of the street lamps.

By the time one has finished the book, one perceives that it is the class, not the individual, and the setting, not the plot, that have affected author and reader. To quote one of the heroes:

> I tell you, Rita, the hall bedroom and the one dress and the one hat have had almost as much effect on some girls' lives in this town as mothers' prayers. What do you think?

The keynote of the book is struck in "A Modern Cleopatra," in a speech by Escott, a bankrupt young clubman, who knows that he ought to go West and begin again:

> He walked across the room, and, raising the window, looked down on the black city with its myriads of yellow lights. The noise of the streets rose in a great wave, and as he held tightly to the window frame, the towers and church steeples seemed to waver slightly, and the high buildings to rock slowly on their foundations, and all seemed to be moving toward him. "My God," he muttered, "how I love it."

In the love of this vast element which engulfs them and shapes their destinies, these creatures of the underworld of art and song, without will or sturdy passion, live and move and have their being. The author's study is the triumph of atmosphere, the triumph of environment. All his characters acknowledge in their lives the mastery of a higher will than their own—the will of New York. This idealism, however, redeems the Bohemians: their lives, unelevated, unlovely, tawdry in detail, are dedicated to what they esteem their highest worth. They are not slaves of routine, for their hearts are in their work; after their fashion, they live the life of the spirit.

Hester of the Hills. By Grover Clay. Boston: L. C. Page & Co.

Sidney Stanton was an only child, as had been his father and his grandfather. He was, moreover, a puny child, and reached manhood only by incessant vigilance. Since he feared lest he might be the last of his family, his sole idea of a wife was a healthy peasant who should rear a mighty race. In the Ozark Mountains of Missouri he found his cracker candidate, took her on picnics, inspected her teeth, saw to it that she should have a few months' civilizing in the household of his St. Louis uncle and cousin, and in the end carried her off, an easy conqueror. When, some months later, through the pique of a discarded mountain lover, Hester learned that Mr. Stanton would hardly have sought her in marriage but as a source of strength for his descendants, she was displeased, and abruptly took the night train home, while Sidney stood "stockish" at the door, "nettled by his incapacity to hold her." Arrived at home in her draggled evening dress, she holds converse with her mother, who advises her to be glad that her husband feeds, clothes, and does not "whup" her. On this, Hester telegraphs her husband that she is "coming back on number two."

As a photograph of life among the cracker farmers and hunters of Missouri, the book is not without significance. Stanton's ownership of vast acres gives chance for statement of enlightened views on forestry. Uncle Brinkley and Sylvia, in educating Hester, make use, severally, of pompous learning and social incredibilities. The topography, customs, family histories, feuds, exploits, both tame and wild, of an only partly civilized mountain folk, are drawn with sharp edges; and so far the book has a place in the national gallery. As a "romance" it is singularly uncouth.

The Breaking in of a Yachtsman's Wife. By Mary Heaton Vorse. Boston: Houghton, Mifflin & Co.

A wholly charming little book is here, full of fun, salt spray, fickle sea breezes, contrary-minded tides. Madame takes us through her entire course of instruction. First, as an engaged girl she had to learn the relative positions of herself and a boat, considered in reference to the fiancé. Next came trying to like boats, then trying to learn to sail them, then really revelling in them and learning really to manage them; and finally settling back into thankful acceptance of whatsoever participation she is allowed—never so happy as when she is fussing about a boat, painting its sides or cleaning out its corners, rowing out after the rain stops, to hoist sails, or best of all, sitting by while her husband and his masculine friends squabble over academic questions of handling. She sings the joys of the boat on shore as well, making us hear the cheerful noises of an American shipyard, and conducting us to obscure regions in Venice, where gondolas receive their periodic grooming. She shows us too her lord and master in his rueful experiences of the way of a Mediterranean boat with a Yankee.

Human nature under the influence of the boating passion is a study which Mrs. Vorse has prosecuted thoroughly, humorously, altogether delightfully.

Wolfville Folks. By Alfred Henry Lewis. New York: D. Appleton & Co.

> You comes to Wolfville, an' it's as though you're beginnin' life anoo. Your past is as nothin' to that hamlet. It begins with you as you steps from the stage. It don't ask your name; it asks, "What may we call you," an' leaves you, as a proodent gent, to pick out what title is best adapted to your needs. As you go romancin' along from day to day, it watches you; an' final, it endorses you or lynches you as seems jest an' mete."

With so engaging a scene as background, how could the sketches of Wolfville Folks be other than desirable? None surely can read them and fail to feel a substantial attachment to the Old Cattleman, who is the narrator; to Doc Peets, "the genteelest sharp, an' the best eddicated, that ever dwells in Arizona"; to Sam Enright, "the soul of fairness"; to Cherokee Hall, "predestined kyard-sharp" though he is; to Faro Nell at his right shoulder "lookin' out the play"; to the rest of the camp which eats its daily flapjacks at the O. K. Restauraw and then adjourns to the Red Light, where Black Jack, the barkeep, holds sway. The episodes that illustrate these gallant gentlemen's fine honor in dispensing justice and in defending weakness are only less winning than the wonderful language of their telling. For variety and adequacy the tongue of the Arizona camp is unapproachable. Taking dialect and story together, the book more nearly than any other we can recall tugs at those muscles of mirth that Artemus Ward first played upon. One feels almost like an Englishman discovering American humor.

The Avenger. By E. Phillips Oppenheim. Boston: Little, Brown & Co.

Modern improvements multiply. When upon a London murder and mystery story is grafted the plight of a queen of Mexonia, with its appeal to chivalry, one recognizes the fusion of two schools of fiction. The combination has its advantages. For what more natural than that royalty from one of the *i-a* countries should have a following, male and female, as devoted as ever were adherents of the Stuarts? And what more consequent than that when the man who stole the letters is found dead with a silken cord drawn tightly around his neck, suspicion should fall on the group, on their friends, and their friends' friends, while the London neighbors of the murdered one, knowing no queen, no Mexonia, no plot, no stolen letters, make precisely the right medium for mystery and conjecture? The long list of *dramatis personæ* thus provided is made up of figures unusually well defined and well projected for a mystery story, where characters too frequently allow themselves to be mere pegs on which to hang testimony. "The Avenger's" folk are nicely alive—all who are not killed. Its manner places it in the class of novels of comfortable manslaughter — smooth-running, readable, pleasantly puzzling. When it comes to the identification of the murderer we take frank issue with the author, and tell him we do not believe it! Either the little boy lied who told Mr. Oppenheim, or the proof-reader was careless.

Science.

Psychology: General Introduction. By Charles Hubbard Judd. 3 vols. New York: Charles Scribner's Sons.

Only the first volume of these three is devoted to theoretical psychology; the other two, smaller in size, are concerned with the practical work of the laboratory, and are admirably adapted to their purpose. The general discussion of the subject is also original, illuminating, and in the main remarkably convincing. The only question is whether (as far as it is boldly original) it has found its proper audience in a class of students: matter which is as yet uncriticised by one's fellow scientists may have to be given up in the end; and the student is not a fitting judge of controverted points. But it may be that the slow building up of defences against critics will follow later on.

As the critic is explicitly warned in the preface, the point of view is throughout functional and genetic; an unusual amount of space is given to the physiological accompaniments of mental life (an admirable feature); and while analogies with lower forms of life are given full weight, special stress is laid on the elucidation of the so-called "ideational processes," which are apparently nothing more than what the classical psychologist might have called reflection, or even cognition. It is easy to treat with too much scorn the so-called structural psychologists. Functional psychology is not so much a new psychology as the addition of fresh subjects of interest to the psychology already known. A sorry mess we should make of our functional psychology if the way had not been prepared by the structural psychologists with their keen analyses. Sensations will never cease to be structural elements of consciousness, no matter how much light may be thrown hereafter upon the way in which the mind works. The trouble with the structural psychologists is not so much that they begin with elements (*i. e.*, constituents of mental experience not farther analyzable), but that their analysis into elements is so often wholly inadequate and wrong. One might think that, busy as they are in examining the contents of children's minds, they had never given any attention at all to the contents of their own, when one sees them persistently maintaining, for instance, that all is made up out of sensation and feeling. To another generation it will surely seem incredible that the experience of being conscious that a *relation* holds between two sensations (that this blue, *e. g.*, looks brighter than that blue) is *composed* of either sensations or feelings, or any combination of both.

It is a curious fact that psychology, which is now no very recent science, has not yet been put upon a firm foundation as regards its first principles and its undefinable concepts (to use the terms of the mathematician). There is no "consensus of the competent" as to the right final analysis of conscious processes. In regard to many of the later doctrines of the subject, and still more strikingly to the foundations, it is not too much to say, as Prof. M. W. Calkins says of the various doctrines concerning attention, that "no one theory has the undivided support even of any one scholar." This state of things, while it is somewhat discouraging as to outlook, has the effect, of course, of making the subject all the more a field of absorbing interest for enterprising minds. What is most to be dreaded is that opinion should be crystallized too soon, and without sufficient thoroughgoing criticism. It is, consequently, good to find that Professor Judd has a method of his own for effecting the fundamental analysis. His types are five in number: sensation, relations between sensations, reactions to sensations (what he calls attitudes, including here feeling, interest, and attention), memory and the ideational processes. This classification will doubtless meet with due criticism in the proper places; it suffices here to say that it leads to a discussion which is fresh, vigorous, and interesting in the extreme. Chapters of particular interest and force are those on "Instinct and Habit," and on "Experience and Expression." The sensations are very adequately treated; in particular, the present reviewer can but admire the acuteness and illumination with which the topic of color theories (usually made most tiresome) is here handled. Less successful, perhaps, is the doctrine of space and time; and intensity is far from deserving the stepmotherly treatment which it gets. One would have expected that the order of the book, and the dividing up into chapters, would have followed closely upon the dividing up of the conscious processes, but such is not the case

There are certain fictions which conduce, no doubt, to the production of a neat, well-ordered structure of psychological science, but which are exposed to the danger of almost certain overthrow as knowledge progresses. Thus, to give an example of many in one (common, of course, to other psychologists also):

> As in the case of sensations, we have physiological processes which parallel and condition these complex phases of conscious experiences. Relational combinations conditioning the relational forms of consciousness are continually going on in the nervous system, especially in the cerebrum; and motor processes are always present as the ends of nervous activities and as the conditions of mental attitudes.

Now it is a part of our psychological and epistemological faith that all conscious experiences have fixed cerebral accompaniments, but this is a very different thing from saying that we know it to be the case, as plain matter of fact, in particular instances. Still less can we say, with any chance of correctness, that there are relational combinations in the cerebrum conditioning the relational forms of consciousness (even if we could know what such "relational combinations" might be); nor that motor processes are always present as the end, for instance, of abstract thinking. When the student has thought out the fact that in circles the greater chords are the nearer to the centre, he stores up his result —perchance—for future action; but to say that he acts upon it at the time is a part of fictional psychology. So also the doctrine that the "condition" (that is, the sufficient and indispensable physiological accompaniment) of being satisfied with a certain conjunction of colors (what would be classed here among mental attitudes) is any motor process whatever is imaginative in the extreme. Affections may invariably have, perhaps, appropriate circulatory and respiratory accompaniments, but these may nevertheless be of a secondary nature, and the real "condition" may be, for aught we know at present, something very different there may be any number of chemical, mechanical, electrical, radio-active, or as yet unknown processes in the cortex which are the real thing involved. In such a case as this, imagination and analogy with less enormously complicated nervous structures are but uncertain guides to truth. In fact, the author himself theorizes to more purpose when he says, on a later page, without noticing the contradiction, that it is the central processes which determine the motor discharges into the muscles that constitute the immediate conditions of attitudes. But this *is based upon* and *amounts to* nothing more than the familiar doctrine of psychophysical (or what should rather be called psychophysiological) parallelism. But this is carping criticism, and it amounts only to saying that psychology is not yet a completed science, with the added warning that love for completeness should not be allowed to outrun plain laboratory demonstration.

The most defective portion of this book is that on the formation of the concept, a title which is forced into covering the judgment and the process of reasoning as well. Science is defined by Judd as the effort to develop a coherent body of concepts. Now, it is true that, when science has all been found out, and has long since become an old story, every judgment will be old, *banal*, non-informational, matter for the conversation of bores; and all knowledge will be packed away in concepts. But that time is now far in the future, and the content of libraries of science is at present very largely in the form of explicit judgments, propositions, or "items of knowledge." Concepts are the coin of thoughts, and thoughts will not be good and effective unless the concepts are adequate—that is, sharp, clear, well-minted, and widely accepted at their face value. But to be in the possession of good concepts is not to be a good thinker, nor necessarily to be a thinker at all. Thought, in the best usage of the term (see Eisler), is identical with all judgments, and uses good concepts merely as good tools. But tools alone are not enough to constitute carpentry. This whole chapter should be recast in the light of a stricter logic. But it is noticeable that the psychologists have one and all been particularly unfortunate when dealing with this difficult subject.

In a mere review, unhappily, fault-finding has to be set out and explained at large, while commendation can usually be expressed in a few lines. Thus we can but repeat that this book contains an unusual amount of admirable introspection, analysis, and reconstruction, and that it must be regarded as a valuable contribution to the subject of which it treats.

The J. B. Lippincott Co. is about to publish "The Perfect Garden," by Walter Page Wright, editor of the *Gardener*. The book is said to be profusely and handsomely illustrated.

Prof. Robert De Courcy Ward's "Climate Considered Especially in Relation to Man" (G. P. Putnam's Sons), a volume in the Science Series, is singularly successful in meeting the object for which it was prepared. It was intended to be "read by an intelligent person, who has not had special or extended training in the technicalities of the science." The simpler divisions of the climatic zones as belts, more or less regular, extending around the earth, and the more elaborate subdivisions involving the contrasts of land and water, of lowlands and highlands, are presented in the first six chapters. Then follows a chapter containing a large amount of information regarding diseases that depend closely upon climatic conditions. Next follow three chapters on the life of man as affected by tropical, temperate, and polar climates; and finally a chapter on changes of climate. The treatment throughout is conservative. Professor Ward has evidently read widely and made a good selection of material; if his courses on climatology at Harvard are to be judged by what we find in his book, his students may be congratulated on receiving a well considered abstract of a large subject.

William Arnold Anthony, an electrical expert, died in this city, May 29. Born in Coventry, R. I., in 1835, he was graduated from the Yale Scientific School, and then taught science in Providence and Franklin, N. Y. Beginning in 1867, he held professorships successively in Antioch College, Iowa Agricultural College, and Cornell University. Since 1887 he has been a consulting electrician, and since 1893 a professor of physics at the Cooper Union Schools of Science. At one time he was president of the American Institute of Electrical Engineers. He has been a frequent contributor to scientific periodicals; he published in 1898 "Lecture Notes on the Theory of Electrical Measurements": and, with Prof. C. F. Brackett of Princeton, he was joint author of a "Manual of Physics."

Drama.

Elizabethan Drama, 1558-1642: A History of the Drama in England from the Accession of Queen Elizabeth to the Closing of the Theaters, to Which Is Prefixed a Résumé of the Earlier Drama from Its Beginnings. By Felix E. Schelling. 2 vols. Boston: Houghton, Mifflin & Co. $7.50 net.

It is illustrative of the rapid march of scholarship that a fresh study of the early English drama should appear only nine years after Ward's second edition. Ward's first edition appeared in 1875, the Preface of his second edition is dated July, 1898; Schelling's Preface is dated July, 1907. The English work and the American, though agreeing in substance, differ in scope and method. Ward continues his story into the Queen Anne period, ending with Addison and Steele; Schelling ends with 1642. Further, Ward's work is entitled "A History of English Dramatic Literature"; Schelling's "A History of the Drama in England." The distinction between dramatic literature and drama has been observed by each historian. In Ward's work we find dramatic impulses, movements, and forms subordinated to authorship. For example, in Chapter iii., "Shakespeare's Predecessors," Lyly, Kyd, Marlowe, Peele, etc., are discussed one by one in order. Chapter iv. gives, first, an Historical Account of the Growth of Shakespeare's Fame; then, a Biographical Sketch; last, a discussion of the Poems and Plays. Thus the great dramatic writer is "disposed of" in 381 pages. In like manner Ben Jonson is disposed of in the 111 pages of Chapter v. If, on the other hand, we wish to follow in Schelling the several phases of Shakespeare's activity, we must study his English historical plays in Chapter vi.; his "Merry Wives" in Chapter vii.; "Love's Labours Lost," "Merchant of Venice," etc., in Chapter viii.; "Hamlet," "Romeo and Juliet," "Anthony and Cleopatra," in Chapter xii.; "Julius Cæsar," "Coriolanus," "Timon," in Chapter xiii.; "Cymbeline," "Winter's Tale," "Tempest," in Chapter xvii. Ben Jonson's work is similarly scattered. The explanation is that Schelling treats his dramatic authors, great and small, under such topic-headings as "The National Historical Drama," "Domestic Drama," "Romantic Comedy," "Romantic Tragedy," "History and Tragedy on Classical Myth and Story," "Tragicomedy and Romance." The individual dramatist figures as one of several factors in a general movement.

Which of the two methods is better? We have no dogmatic answer at hand. Assuredly, each method has its right of being. Perhaps Professor Schelling wished to avoid the semblance of treading tamely in the steps of his predecessor; perhaps—and this is our preferred supposition—he argued that the time was ripe for handling the drama as a succession of grand impulses rather than as a gallery of illustrious names. At any rate, the public is the richer by a novel method. Nevertheless, we fear that the general reader, who knows only his Shakespeare fairly well, and seeks to compare him as an entirety with his predecessors and successors as entireties, will be puzzled more than once by this topic-grouping. At any rate, we fail to apprehend why "Antony and Cleopatra" should be in Chapter xii. ("Romantic Tragedy"), and "Coriolanus" in Chapter xiii. ("History and Tragedy on Classical Myth and Story"). To our way of thinking the late Egyptian tragedy is no more "romantic," no less "historical," than the early Roman play. The rider who sits firm in his saddle will follow with keen zest and abiding profit this zigzag after authors through topics, for he will get ever fresh glimpses of familiar objects; certainly his ear will be closer to the throb of the great English stage. But the rider less expert will, we fear, be constrained to dismount at many a turn and ask his way.

Within the narrow limits at our disposal we cannot attempt the briefest evaluation of our author's scholarship. Fortunately, Professor Schelling's reputation for accuracy and research does not need either testamur or caveat. We will only select a feature here and there for special praise or mild dissent.

In the matter of style the present work is decidedly stimulating; it carries the reader along more vigorously than does Ward's work. Our sole grumble is at the excessive use of the preposition-phrase "as to," where a simple "of" or "in" or "about" would be more legitimate. Occasionally one meets with an expression which is not quite authorized by usage. For example, in I., p. 257, the old play of "Jack Straw" is "the story of the villains' revolt"; true, we all know, or should know, that in our earlier language a peasant was called a villain, yet the modern historian entitles Jack Straw's rebellion the peasants' revolt. The Irish euphemism for fairies is not "other people," I., p. 395, but "good people." We wonder, also, how many of the non-elect will know who is meant by the "Christian Terence," II., p. 1. The French term *estrif* is in several places spelled *estrife*; this is neither French nor English.

Of the author's downrightness the following, I., p. xxxii., will serve as a specimen:

> The happy Elizabethans were little troubled by the eternal fitness of things, and were as innocent of the existence of that monster, anachronism, as they were unaware of that strict code of twentieth-century morals whereby a man may not take his own thoughts, if he happen to find them in the works of one of his predecessors.

An apt sentiment aptly expressed, though not quite as searching as the venerable malediction: *Pereant qui ante nos nostra dixerunt*. In more serious vein is this, I., p. 544:

> Marston's situations, too, in their attempt at originality, lapse into the improbable and the absurd. He is apt to take his readers long journeys through the ooze and slime of the marshes in quest of his rare and exquisite orchids of virtue. But the quest is often well worth our effort; for, with all his defects, Marston is one of the great Elizabethan brotherhood, and shares in that strange mingling of earthiness with things spiritual and visions poetic which was the birthright of that fortunate age.

Even more admirable is the summing up of "Hamlet," pp. 561-2; but it is too long for quotation, and we have given enough to whet the reader's appetite. Of the individual chapters, those which please us most are Chapter vi., "The National Historical Drama," for which indeed we were prepared by the author's previous monograph on the Chronicle Play; and the final Chapter xx., "The Drama in Retrospect." Here, in sixty pages, is a panorama in miniature of the whole movement from 1558 to 1642. So clear, concise, and vivid is the treatment that we are tempted to advise the reader to begin with this chapter by way of getting at once in touch with the author's method.

It lies beyond our scope to enter into the minutiæ of Shakespearean interpretation; else we might dissent from some of the author's remarks upon "Twelfth Night" and "The Merchant of Venice," upon Shakespeare's "negligence of plot," and upon the character of Julius Cæsar. On the last two points we incline rather to Moulton. Yet, after all, Professor Schelling is a passed master in the diligent study of the drama in England, and few of us may aspire to rival him in erudition or in general sanity of judgment. His defects, if we have the right to use so harsh-sounding a word, are inherent in his very qualities. Knowing the drama of Old England from alpha to omega, he sometimes overlooks or misapprehends the connection between that drama and general European literature, dramatic or otherwise. For example, from what is said in I., pp. xxviii. and 27, 77, the incautious reader might infer that the humorous treatment of King Herod and of Joseph the husband of Mary was a specifically English development; whereas nearly all, if not quite all, the humor lavished upon Biblical personages was an outcome of the general mediæval spirit. The fooling of the Devil, I., 356-7, is also general European; see Wünsche, "Der Sagenkreis vom geprellten Teufel," especially Section iii., "Der geprellte Teufel als Freiersmann." To say, I., 386: "The magician, on the other hand, dates back to no such antiquity, but is mediæval in origin and the creature of historical romance," is to ignore Simon Magus and all his tribe. The contests between the apostles and Simon in the apocryphal Acts, some of which are quite early, remind one of the struggle between Moses and the Egyptians in Exodus.

Our most serious objection, however, lies against the author's treatment of the origin of the liturgical drama. At p. 2 we read: "The drama . . . may be technically described in its beginnings as an antiphonal and *mimetic* development of certain tropes of the *Mass, transferred* to the celebration of Easter or Christmas." Again, p. 4: "In the Concordia, . . . ascribed to Dunstan, but more probably Ethenwold's [an evident misprint for Ethelwold], and dating about 967, there is a description of the ceremonial of a Quem quæritis *transferred* to the celebration of Easter." The italics are ours. Now this entire theory of *transference to Easter* is, in homely phrase, putting the cart before the horse, besides misrepresenting the character of the mass. The Quem quæritis in sepulchro trope did not originate in the sacrament of the mass proper, consequently could not have been "transferred" from the mass to Easter. On the contrary, the trope *originated in the matins of Easter Sunday*, and remained there an indeterminable period. The Christmas trope grew out of the Easter trope with a slight change of formula; the Quem quæritis in sepulchro, Christicolæ, became Quem quæritis in præsepe, pastores. That is, the three Maries at the sepulchre became the shepherds at the manger. The words of Lange, "Die lateinischen Osterfeiern," p. 78, are explicit:

> Als Aufführungszeit ist in sämtlichen Denkmälern, wo dieselbe erkennbar ist, die Matutin des Ostersonntags bezeugt, in welcher die Feier ihren Platz nach dem dritten Responsorium *Dum transisset*, etc., hatte und als Regel mit dem Te Deum schloss.

Wirth, "Die Oster- und Passionsspiele," p. 3, says the same; and Creizenach merely echoes Lange and Wirth. The conclusion with the Te Deum is significant; that hymn has never formed a part of the consecration of the elements which constitute the mass proper.

Some fatality haunts the utterances of English writers on this point. Ward, in his first edition, speaks of the "pantomimical" element in the action of the celebrant, and repeats the error in his second edition, Davidson, "Studies in the English Mystery Plays," has a section headed "The Doctrine of Transubstantiation as a Dramatic Motive," and even Chambers speaks of the mass as "an essentially dramatic commemoration." All this savors too strongly of the ultra Protestant hocus pocus of Prynne's "Histriomastix." We shall never attain to a clear understanding of the nascent liturgical drama unless we cut loose absolutely from the interpretation of the mass as mimetics and histrionics, a gross misconception, and confine our attention to a simple Easter morning service. Whatever the later Church plays may have become, the early liturgical plays in Latin were a simple but most effective presentation of the gospel story of the Maries at the sepulchre.

The Index is an admirable piece of work, as near perfection as anything of the sort is likely to be. The Finding List of Plays is also excellent; we note, however, the omision of the play of Thersites. Concerning the Bibliographical Essay we speak less confidently. It is too much an essay and too little a bibliography. To him who may have the patience to study it through and through it will be an instructive guide. But as a ready means of discovering, for example, what editions of a play are in existence and just what has been written on the play, the bibliography will be puzzling, if not disappointing, in places. The editor would have done well to discriminate, p. 442, between those publications which are genuine periodicals and those which are merely collections of monographs, *e. g.*, Münchener Beiträge, Materialien zur Kunde, etc.

In parting we congratulate Professor Schelling on having produced a work of which we may all be proud, a work of which every note rings true, a work whose doctrine is throughout stimulating and helpful. We like especially the dedication "To my students," etc. It is a pity not more of us were thus frank in admitting that our students are our better half.

At the recent meeting of the Deutsche Shakespearegesellschaft in Weimar, the prize offered for the best work on "'Hamlet' auf der deutschen Bühne bis zur Gegenwart," was awarded to Prof. A. von Weilen of the University of Vienna, and a second prize to Adolf Winz of the Royal Theatre in Dresden. Both of these productions are to be published.

It now seems probable that the great memorial to Shakespeare, which has recently excited so much discussion in England, may take the form of a theatre in London.

The poetic drama "Lanval," written by T. E. Ellis (Lord Howard de Walden) and recently produced in London, seems to be a work of respectable literary and fair theatrical quality. The story appears to be suggested by the adventures of Tannhäuser and the Scriptural Joseph. To begin with, Lanval, the Italian knight at the court of King Arthur, is enthralled by Triamour, the spirit-woman, "from the quiet of the middle world," whom he meets in a wood. For three months he dallies with the fair enchantress in the "middle world," which is understood to symbolize the world of dreams. Then he tears himself away, returns to the Arthurian court, overthrows Agravaine, a boastful knight, in the jousts, and becomes the object of a guilty passion on the part of Queen Guinevere, who seems to have forgotten both her husband and

Launcelot for the time being. Like Joseph, Lanval repulses her addresses, only to be traduced before the King by Queen Guinevere herself—whose love has turned to hatred—and doomed to banishment. The blank verse is said to rise at times to the level of good poetry.

Anna Haverland, one of the best-known actresses of the German stage, has died in Dresden. She came to America to act the title rôle in the first German performance of Ibsen's "Hedda Gabler," a part for which she was selected by the author when the drama was first given in Berlin. She was born in 1854 in Leipzig, and began her stage career there. Later she went to Dresden and took the leading parts in the modern and classic plays. She was at the Court Theatre in Berlin, travelled with the Meiningen players to London and St. Petersburg, and acted at various private theatres in Berlin. In 1890 she appeared in New York, and on her return to Germany she retired from the stage. Her greatest success was won in the tragic rôles, although she was highly praised in certain plays of Ibsen. She had written verses and essays which met with some favor in her own country.

Music.

Bayreuth and Munich are not the only German cities that will have opera festivals this summer. Cologne will have a series of performances lasting from June 11 to June 28. The operas to be sung are Wagner's "Tristan" and "Meistersinger," Mozart's "Figaro," Verdi's "Falstaff," and Debussy's "Pelléas et Mélisande." For this last-named work Mary Garden and the vocal ensemble of the Brussels Opera have been secured. Among the other artists engaged are Olive Fremstad of New York, Frieda Hempel of Berlin, Minnie Nast of Dresden, Frau Preuse Matzenauer of Munich, Carl Burrian of Dresden, Messrs. Demuth and Slezak of the Vienna Court Opera, Paul Knüpfer of Berlin, Albert Reiss of New York, and Messrs. Feinhals, Geis, and Von Kraus of Munich. The directors will be Fritz Steinbach and Lohse of Cologne, and Felix Mottl of Munich.

An opera of Bizet's which has not yet been produced in Paris was given in Rome a few weeks ago. Its title is "Don Procopio," and its history is interesting. One day, while Bizet was living in Rome as holder of the Grand Prix of the Paris Conservatoire (1859), he came across an old volume at a bookseller's which contained what seemed to him material for a good light opera. He wrote the libretto as well as the music, and when the opera was completed he sent it as a specimen of his work to the judges in Paris. In regard to it he wrote to a friend:

> I am working hard; have just finished an opera buffa with which I am not dissatisfied, and hope the Academy will find that I have improved in my style.

Ambroise Thomas, however, was not impressed, and the score passed into the hands of Auber, who put it among a lot of papers, which, after his death came into the possession of his daughters. In 1894 Weckerlin, in sorting these papers, found the opera which Bizet and his friends had given up as lost. The libretto was missing, but a new one was made by Choudens and Malherbe.

The death is announced from London of the composer Jacques Blumenthal, who was born in Hamburg in 1829, and came from Paris to England at the outbreak of the Revolution of 1848. Some of his songs, such as "The Message," "Good Night," "In the Shadow," and "In the Sunshine," were very popular.

Art.

Alessandro Filipepi, Commonly Called Sandro Botticelli, Painter of Florence. By Herbert P. Horne. Folio; pp. xv, 366; 42 photogravure plates. 225 numbered copies. London: George Bell & Sons. £10 10s.

This beautiful folio is in striking contrast to the big books on art that drop so frequently from the publishers' presses. Such seemliness of page and perfection of process engraving are not to be got with hasty manufacture. The book has been in hand something more than fifteen years, and has so far outgrown the original plan that the work of Botticelli's school, indexes, and addenda will afford material for a second volume. Though a scholar's book for scholars, it avoids the usual tangle of footnotes; the fairly printed text runs unbrokenly between rubricated side notes that give succinctly the indispensable references, while the actual documents are printed in full at the end. The contribution to Botticelli's biography is unexpectedly large. Through the discovery of new parchments and the thoroughgoing use of those already known we gain something like a picture of Sandro's family life, of his patrons, of his melancholy devotion to the lost cause of Savonarola. We lose as well certain dear legendary matter. Lorenzo the Magnificent diminishes as a patron, the Fair Simonetta disappears as a sitter. In short, the work is a learned and loving reconstruction of the life of the painter—an attempt to set us near him in his Florence.

Except as Mr. Horne, following recent authorities, has made a clean sweep of the school pictures, the book leaves the æsthetic appreciation of Botticelli much where it was. In this respect it is adequate, and a careful reader will not fail to perceive the author's attitude towards Botticelli as "the master of contour." One could wish, however, that the critical observations on the individual pictures might somewhere have been brought to a focus. As it is, Mr. Horne should have the credit for a literary handling of a most laborious investigation: there are singularly few passages in this encyclopædic biography that must be regarded as merely for reference. In fact, for a similar example of mellow scholarship equally regardful of the parts and of the whole, one must go back to such biographies as Nott's "Surrey and Wyatt," which after a century of eager research still holds its own as an authority. To enumerate the items of biographical and antiquarian interest presented for the first time in this study would be impossible, but we may suggest a few of the more important.

By 1459 we must assume that Alessandro Filipepi, then a fifteen-year-old lad was already with Fra Filippo Lippi. The ever dilatory friar was then under pressure to complete the frescoes in the choir of the Collegiata at Prato. From him, Mr. Horne believes, Sandro learned his peculiarly graceful and expressive use of the line. In pressing this obvious relation, it seems to us that the immense difference between the Frate's draughtsmanship and that of his pupil is ignored. At all times Sandro's line is at once more calligraphic and more dynamic, and here is a fact that we may account for either by temperament, or by supposing especial advantages from an apprenticeship at goldsmithing. Vasari tells us that Sandro got his nickname "il Botticello"—the cask—from an apparently mythical goldsmith thus qualified. Mr. Horne points out that Botticello was the nickname of Sandro's eldest brother, Giovanni. Its transfer to the younger brother may well mean that the brother took the charge of the young painter. We know, too, that the second brother Antonio was a goldsmith during Sandro's boyhood, and here may be the ground of Vasari's account. In Botticelli's earliest work we find something of that nervousness of line that often comes from the use of the tracer. It would be interesting to digress and show how the practice of that admirable instrument has invariably enhanced the talent of true draughtsmen, such as the Pollaiuoli and Verrocchio. In drawing on metal, especially in working out designs in relief, the line must be agile and expressive, the method concise and symbolic. As a rule, the Italians who have shown great preciousness and power of pure line have had some experience as goldsmiths or sculptors. Whether or not Sandro had this training early from his brother, he was, at any rate, early initiated into the kind of drawing we mean through his association with Antonio Pollaiuolo. His influence seems to us to outweigh that of the Frate. In any case, it is already strong in the oblong Adoration of the Magi, in the National Gallery, which Mr. Horne regards as Botticelli's earliest painting. By 1470 we find Botticelli actually the associate of the Pollaiuoli in painting the Virtues for the Hall of the Mercanzia, while a few years later we catch him borrowing the lovely figure of the Flora, in the Allegory of Spring, from one of Antonio's silver reliefs. Everything points to the early supersession of the somewhat inert formulas of Fra Filippo by the strenuous methods of the greater Pollaiuolo. Some such view is implicit in Mr. Horne's cautious pages, for he rejects all of those nondescript products of the Frate's studio which the late Hermann Ullman and others had laboriously assembled to provide Botticelli with a "first manner." Some years ago, after this part of the book was in type, a Madonna in fresco was discovered in an oratory above Settignano. Mr. Horne then published it as Sandro's earliest work, and will presumably return to the matter in the second volume. To us, who know the painting only from a photograph, its quality is unconvincing.

No discovery of new works by Botticelli was really to be expected, and Mr. Horne adds to the familiar list only a much damaged fresco of the Annunciation in the suppressed convent of S. Martino, via della

Scala, Florence. He rejects the Munich Pietà, which seems to us one of the finest works of the master. He accepts as late works the Judith of the Kaufmann collection, Berlin, and the design of the Strange Crucifixion owned by M. Aynard, at Lyons. So far as one may judge by the admirable reproductions, these pictures seem doubtful, despite their evident relations with the Dante drawings. Besides those famous illustrations, Mr. Horne admits as authentic only eight drawings, five in the Uffizi, two in the Louvre, and one in the British Museum. To us this seems an excess of skepticism, and in particular we have never seen any cogent argument for rejecting the lovely pen sketch of an orchestral ring of angels surrounding a Coronation, in the Uffizi. In general, as we have noted, Mr. Horne remains on the sure ground of historical fact. We get from him an enormous amount of information about the Florentines, who came into relations with Botticelli either in an artistic or business way. Much of this material is of the minute sort, and it would be easy to flout it with the hackneyed citation of Goethe's wash lists. But this would be unfair. Such antiquarian small change may at any time assume a major value—help, for example, to date a crucial picture. Mr. Horne has supplied a mine in which students may profitably dig for many years to come.

Nor are the smaller rectifications without critical significance. It seems a small thing to show that the Spring, the Birth of Venus, and Pallas and the Centaur, were commissioned not by Lorenzo the Magnificent, as had been surmised, but for his cousin Lorenz di Pierfrancesco de' Medici, who was of the popular party. But this correction takes Botticelli further away from the court of the Magnifico, emphasizes the inwardness of his inspiration, and removes the alluring but extraneous legend of the Fair Simonetta. So in many instances Mr. Horne's patient compilations and adjudications help us to a more just view of Sandro's activity. We can mention only in passing the elaborate studies of the contemporary engravings which have been ascribed to the master, and such lists as those of embroideries based on his designs. Of more general interest is the careful reconstruction of Botticelli's attitude as a follower of Savonarola. After many biographies on this theme it is the first that gives its hero any convincing reality. The characterization of individual pictures is admirable; the too brief summing up of Botticelli's mastery as lying in contour rendered by line may well be the starting point of a long debate into which we cannot enter. We feel that the positions occupied by Mr. Horne as a connoisseur will rarely be successfully assaulted. This may be a disappointment to critics of the belligerent sort, but they, too, will have their innings when the second volume on Botticelli's School appears.

One of the most infectiously enthusiastic of recent books on any of the arts and crafts is Bertie Wyllie's "Sheffield Plate" (imported by Charles Scribner's Sons). Few Americans will read it and not want forthwith to collect or even to make articles from the "copper rolled plate"—that is the trade name—which thrifty middle-class ancestors used as a good-looking substitute for solid silver. The author adds:

> All that is necessary is for the public to signify their desire to have it, and willingness to pay the higher price inseparable from the cost of making beautiful hand-made specimens of the silversmith's art, instead of machine-stamped, coarsely shaped, roughly finished electro-plated rubbish. Surely people of means will be willing to do this when they know that it is possible to get these beautiful things made again. Surely they will refuse to go on buying the unlovely electro-plate which they have put up with for the last fifty years, when they hear that the art of copper rolled plate would be only about twice the cost of electro-plate and half the cost of silver—in all large pieces, at any rate. I believe that they will, because I know many people who hate electro-plate, and wish for the old designs and old workmanship.

Not only in Great Britain, but in this country, interest in Sheffield plate has been somewhat revived in the past few years. For antiques there is abundant demand, and at least one American firm is producing meritorious reproductions and originals. The process consists essentially in welding to one face or to two opposite faces of a copper ingot a sheet or sheets of fine or slightly alloyed silver. The composite ingot thus formed is flattened out under heavy rollers. The process was invented about 1742 by Thomas Bolsover, a mechanic of Sheffield. The designs employed, in accordance with changing fashions of the eighteenth century, followed a course whose stages are denominated by the dealers as "Queen Anne," "Early Georgian," "Adams Period," "Empire Period," "Late Georgian," and "Late." One of the services rendered by this newest book is to elaborate a more accurate nomenclature of the patterns. The manufacture, as is well known, flourished until about 1840, when a patent was taken out for a process of depositing silver by electro-decomposition upon copper, nickel, or German silver. Thereafter the making of copper-rolled plate gradually died out. The author holds beliefs common to the arts and crafts movement, so that the book, irrespective of its wealth of specific information, will be prized by many people for its general doctrines. It pleads strongly with all householders to purchase a few things, well made and having the hand quality, rather than fall victims to the expensive cheapness of articles which cost little at the outset, but which must speedily be replaced.

Some interesting excavations are being carried on near Piombino, the site of the ancient Etruscan city of Populonia. This city, which is one of the few Etruscan strongholds known to have been built on the seashore, must have been of considerable importance, since it had its own coinage. According to Virgil, Populonia sent help to Æneas; but other authorities gave it a much later date, describing it as a colony from Volterra. The present excavations justify the claims for its high antiquity. Among the sixty-four tombs brought to light, the earliest are Italic tombs of incineration, identical with those found at Vetulonia, and containing vases and ornaments of the well-known "Villanova" type. There are also tombs of inhumation; Etruscan tombs of the archaic period; and later ones with painted vases of the third century B. C. The most interesting of these tombs are: one in the shape of a cradle, containing the remains of a small body, entirely covered with ornaments of bronze and amber; and one of a young girl, evidently of a high caste, as is shown by her rich ornaments and jewelry. On her left was found a solid gold ring, and around her head was a gold diadem of exquisite workmanship. This tomb also contained several bronze and terracotta vases. All the objects found will be placed in the Etruscan Museum, at Florence.

Recent excavations in the garden behind the royal palace at Turin have opened the semi-circular area of the Roman theatre discovered several years ago. Many pieces of its decoration and a bronze fragment of the Augustan period have been found. This bronze is a delicately modelled foot wearing a shoe. It is more than life size and is supposed to belong to a statue which Cozius, a barbarian king who became a Roman prefect, erected to Augustus. The King has ordered all that part of the garden explored, in the hope of discovering the rest of the statue and its dedicatory inscription.

The second Salon des Humoristes, organized by the proprietors of *Le Rire*, has opened at Paris, and, like the first a year ago, is proving a great success. To some people, the exhibition has one serious fault; there is too much of it. It includes over nineteen hundred exhibits in the modern section alone, and to these are added a series of Gustave Doré's early work, done in the forties and fifties, for *Le Journal de Rire*, and a collection of the drawings and prints of English humorists from Hogarth to Leech and his colored lithographs. No one could read straight through a book of the choicest witticisms without feeling surfeited long before reaching the end; and so, there can be too much of a good thing in the best collection of comic drawings. But many of the most admirable draughtsmen in France draw for the weekly and daily papers, and it is a pleasure to see in the original the work of men like Jean-Louis Forain, Chéret, Charles-Lucien Léandre, Léon-Adolphe Willette, Pierre-Georges Jeanniot, and Albert-André Guillaume. The contemporary work from abroad is not particularly remarkable—Americans are hardly represented. But the collection of English humorists chiefly of the eighteenth century has been better made than would have seemed possible in France.

Early next winter a new wing of the Metropolitan Museum of Fine Arts will be opened with an exhibition of modern German art. The objects to be exhibited, consisting of paintings and sculptural works in bronze and marble, will be collected by a committee, under the general supervision of the art director of the German government, Wilhelm Bode.

There is now on exhibition in the Art Museum and in the corridors of the Library of Bryn Mawr College an interesting collection of photographs and reproductions of practically all the old masters which are now in this country. The exhibition is limited to paintings antedating 1700; and, leaving out of account the catalogues of the P. A. B. Widener and the William L. Elkins collections, which are illustrated by very fine plates, there are 528 photographs. There are also photograph albums of the collections of Dr. George Reuling of Baltimore and of the C. B. Walker collection of Milwaukee. The collection has been made and catalogued, by Dr. C. L. Ransom, head of the department of art and archæology, Bryn Mawr, and Miss Una McMahan, demonstrator in art and archæology. The exhibition will close June 5.

At the sale of the Gerbeau art collection in Paris last week, the following prices were paid for etchings by Whistler: Palaces, 4,200 francs; Little Venice, 1,350 francs; San Biagio, 1,200 francs; and The Balcony, 1,500 francs.

At an auction at Christie's, London, on May 15, pictures with the following attributions were sold: D. Teniers, A Kitchen, £210; R. van der Weyden, Madonna and Child Enthroned, £630; G. Terburg, Portrait of a Gentleman, £210; Rembrandt. A Philosopher Writing, £315; Raeburn, Harie Guthrie, £262; Goya, Pepe Illo, $546; Count Florida Blanca, £210; Murillo, St. Joseph and the Infant Saviour, £315; Velasquez, A View in the Park, £210; A. van der Neer, A Woody River Scene, £672.

Walter Satterlee, the painter, died in Brooklyn, May 28. He was born in that city in 1844, was graduated from Columbia in 1863, and studied at the National Academy of Design, and also under Léon Bonnat in Paris. He was successful as a teacher, and also as a painter of figure and *genre* pictures. In 1879 he was elected an associate of the National Academy, and in 1886 he received the Clarke Prize at the Academy.

Charles Drouet, who died recently in Paris, was a sculptor comparatively unknown to the general public. He was an artist of accomplishment, though in France, where the average of sculpture is so high, this is not always sufficient to bring reputation and commissions. He had been one of a group of students who worked together in Paris in the fifties; among them were two or three destined to become the most distinguished artists of the second half of the nineteenth century—Whistler, Fantin-Latour, Manet. Drouet and Whistler once had their studios in the same building. Whistler made a portrait of Drouet in one of his now most celebrated plates; and Drouet owned Whistler's early painting of the old man smoking, which was shown in the Paris Memorial Exhibition, and early Whistler etchings which the collector might well have envied him. He had, moreover, an astonishing collection of pictures, prints, and drawings, picked up no one knew where, which covered the walls and the floors of his rooms, even his bedroom and his bed, in the Rue de Seine. No one who was ever admitted into his apartment can forget the bewildering litter everywhere. and the charming, alert little old man, with his fresh color, his brilliant red skull cap, and his youthful enthusiasm, who displayed the Romneys and Constables and Turners and Lawrences which he regarded as his greatest treasures. Like Whistler, he was young and a delightful companion to the very end.

The death is announced at the age of fifty-six of Roger Ballu, formerly Inspecteur des Beaux-Arts. He was the author of "L'Œuvre de Barye" and "La Peinture au Salon de 1880."

Finance.

THE "SUNSHINE MOVEMENT."

The aftermath of the panic of 1907 has been characterized in this country by many singular incidents which have perplexed students of economics quite as much as practical business men. Such occurrences as the remark by Judge E. H. Gary, chairman of the Steel Corporation, when rejecting propositions for lower prices, that the fact that the demand is less than the supply does not furnish an argument for lowering the price, and the subsequent decision of the Eastern railway managers to *increase* rates because demand for transportation had decreased, suggested topsyturvy conditions, at any rate in financial thinking. For these vagaries there was at least the explanation that the two industries feared to reduce the price of labor, and believed themselves near enough to monopolistic control to force the general public to make up what should normally have come from a lowered labor cost.

A third phenomenon, however, cannot be explained on just these grounds, because its basis seems at first sight to be emotional and sentimental. Last March the commercial travellers of the country were summoned to meet at Baltimore in what was termed a "Prosperity Convention." About one thousand came; they were addressed by numerous speakers with an appeal to "'cheer up" and "get out into the sunshine." Obviously the purpose was to persuade merchants or for merchants to persuade themselves, that trade was not so bad as appearances indicated. It was not clear what success this curious gathering had. Certainly it did not end the commercial depression; as a matter of fact, the flicker of reviving trade activity, which occurred just before the Baltimore meeting, disappeared almost completely towards the end of March and during April. But the chief movers in what was now called the "sunshine propaganda"—among whom were some really important Western business men—continued to organize "prosperity associations." They appointed dates for national conventions, and appealed to all other trade organizations to send delegates—even presenting that request, last month, before the staid Chamber of Commerce of New York, which had some difficulty in pigeon-holing the appeal without hurting some one's feelings.

As was to be expected in a Presidential year, efforts were straightway made to draw the "sunshine conventions" into politics. At Baltimore, in March, after a speech by Representative Fowler of New Jersey, the "prosperity convention" unanimously indorsed the Fowler currency bill. Last month a delegation from the national association called on President Roosevelt, to ask him, somewhat timidly and deprecatingly, not to do anything strenuous now, which might disturb business. This phase of the demonstration was promptly dubbed, by its enthusiastic supporters, the "give-us-a-rest-and-sunshine movement."

The financial and commercial side of the matter has this week, however, been presented in an extremely curious aspect. A week or two ago, the officers of what was now formally styled the "National Prosperity Association," with headquarters at St. Louis, announced that they had decided to designate the first of June as "Reëmployment day," and that on that date increased orders were to be sent by merchants to manufacturers; and laborers who had been laid off because of the trade reaction and reduced activity in business, were to be reinstated. The first of June arrived, and the story of the day certainly was one of reviving activity in trade. A large number of the New England cotton mills, which had been working on half-time, resumed full production. Around St. Louis itself, according to the assertions of the Prosperity Association, new orders for $5,000,000 worth of goods were sent out to manufacturers, and 17,508 laborers were reemployed.

This extraordinary incident looks, on its face, as if a gigantic experiment in Christian Science had been tried successfully; as if a determined crusade to make people believe that they were prosperous had really made them so. If this were the only explanation, then we should have to wait until the hysterical stage of supposed recovery had passed, and the disease had again begun to progress. In any case, it will be wise to keep an open mind until we see just how much permanency there is in this June resumption.

But it is not really necessary to resort to morbid psychology to explain the event. Experienced business men, even in the crisis, perceived that the sequel to 1907 could not be exactly similar to that of former first-rate financial panics. Aside from such advantages at the present time as the sound currency and well-guarded Treasury, which did not exist during other setbacks, two factors of the highest importance have favored a relatively early return to health. One was the great and seemingly imperative demand for the products of our soil on the part of foreign consumers; the other was the financial wealth and power of the agricultural West itself—the half-bankrupt burden on the East in 1893 and 1873 and 1857, but the reservoir of capital, credit, and genuine resources in 1908. The principal doubt was whether or not nature would favor these farm communities with an abundant yield this year. On this depended the character of the coming season's trade.

The fixing of June 1 as the day for increased activity was not arbitrary edict or pure chance. By that date in any normal farming year, the prospects of the early

crops are reasonably assured. This year, after ideal weather, the winter wheat is in excellent condition. In the Northwest, where the later crop is grown, the season is yet young, but there, too, indications are extremely favorable. Since orders for goods are commonly placed at the opening of a month, it is entirely probable that a great part of the week's increased activity in trade, and even the increased employment at the mills, would have occurred even without the edict of a Prosperity Association. Under not dissimilar conditions, a precisely similar revival of trade occurred in the spring of 1895 and the fall of 1904, after a period of depression.

Whether this means that the period of reaction is past, is a very different question. The week's recovery was by no means common to all trade. Pittsburgh's horizon has been only slightly brightened, and even in the dry goods industry, there is much skepticism over the immediate future. We have before us the disturbing possibilities of a Presidential contest, and the richest of all our crops, Indian corn, is barely above ground. It was a failure, not of the wheat or cotton crop, but of corn in 1894 which checked all that year's tendency to revival. These are, however, only possibilities; the facts at the moment point to a relatively rapid recovery from depression.

Cornell Studies in History and Political Science
JUST ISSUED
Western Asia in the Days of Sargon of Assyria, 722-795 B.C. A Study in Oriental History
By ALBERT TEN EYCK OLMSTEAD, Ph.D., late Thayer Fellow, American School of Oriental Studies, at Jerusalem. 200 pp. 12mo. $1.25 net, by mail, $1.33.
The author, after collecting the published Assyrian data, visited Syria, travelled over a large part of the lands and visited the principal cities mentioned by the scribes of Sargon. The results are modifications of the chronology and of the topography, and new light on a number of the unsettled questions.
PREVIOUSLY ISSUED
Money and Credit Instruments in their Relations to General Prices
By EDWIN W. KEMMERER, Assistant Professor of Political Economy in Cornell University. xi+160 pp. $1.25 net, by mail, $1.31.
A distinctly new treatment of a very old subject and a real contribution to economic science. Without doubt the most complete statistical test of the quantity theory of money that has yet been made.
HENRY HOLT & CO., N. Y.

BOOKS
We offer out-of-town patrons painstaking and intelligent service in all matters connected with book-buying. Correspondence solicited.
MONTHLY BULLETIN OF NEW BOOKS FREE.
E. P. DUTTON & CO., 31 West 23d Street, New York.

NOW READY
Vol. II. The End of the Middle Ages
The Cambridge History of English Literature
Edited by A. W. WARD, Litt.D., and A. R. WALLER, M.A.
To be in 14 Volumes, Royal 8vo, of about 600 pages each. Price per volume $2.50 net
Subscriptions received for the complete work at $31.50 net, payable at the rate of $2.25 on the notification of the publication of each volume
PREVIOUSLY ISSUED
Vol. I. From the Beginnings to the Cycles of Romance.
One of the many favorable comments on Vol. I.:
"Lucidity and conciseness of statement are conspicuously linked in this book with exact knowledge, the sense of proportion, and critical insight. Altogether, 'The Cambridge History of English Literature' has made an excellent beginning, and promises in its completed form to be one of the most valuable works of reference in the language."—Standard.
G. P. Putnam's Sons, New York and London

The Nation.

NEW YORK, THURSDAY, JUNE 11, 1908.

The Week.

Old hands at national conventions profess themselves staggered at the rough directness with which the Roosevelt control of the party machinery is being exerted. What becomes of the fine art of politics? Where are all those nice compromises, that magnanimity of the victor, that desire for conciliation and harmony which we have always understood to be the full flower of political management? The Democratic bosses of New York State, Murphy and Conners, could scarcely be more frankly brutal than the Taft managers have thus far shown themselves at Chicago. They mean to let nothing get away. To ride rough-shod over Senators and Representatives and protesting committeemen and delegates, appears to be their conception of the height of political wisdom. And when the result of their strong-arm tactics was reported to the White House, he that sitteth in that heaven held his opponents in derision. A decent regard for appearances would have dictated some other course than having three of Taft's hired men turn up with proxies for seats in the National Committee. Among all the well-known Republicans favoring the Secretary's candidacy, it must have been possible to find two or three who would have used the artfully provided proxies, and thus spared the committee and the party the affront of having three men who were known only as paid out of the Taft campaign fund step forward to pass judicially upon credentials which they themselves had secured. That would at least have been to keep a very thin velvet glove over the iron hand. The whole incident, with its violent break with party traditions, and the disagreeable effect it has produced upon the older Republicans, is but one evidence more of the great change in political manners and methods since Mr. Roosevelt came to look upon the Republican party as his personal property. To him, the possession of power without using it to the utmost, is sheer folly. The nomination of Secretary Taft is his doing. He set the whole Federal machinery to work for the purpose of bringing it about. All the other Taft managers were putty in his hands. As for the party, what does it exist for but to take instructions from him? Discipline must be maintained; and if any left-over Republicans of an epoch before the age of brass think that the delicacies and the decencies ought to be observed in running a national convention, it is time that they learned their mistake. This is the day of Thorough.

"Hands off the judiciary!" is an admirable appeal at any time. It is particularly fitting that just at this juncture representative men like Joseph H. Choate, A. Barton Hepburn, ex-Chief Justice Andrews, ex-Secretary Tracy, Mr. McKinley's Attorney-General, John W. Griggs, and Presidents J. M. Taylor and Rush Rhees, should petition the Republican party to include in its platform the following declaration:

> We affirm our confidence in the integrity and justice of the courts, State and national, and we insist that the preservation of their independence and full constitutional prerogatives is essential to the maintenance of the American system of government.

That sounds as if it had been written in 1896, when the Republican party was aghast at Bryan's attack on the courts. Times have changed, and not in any respect more than in the attitude of McKinley's successor towards judges. Such a plank would be extremely useful in holding men who are disturbed by the radicalism of to-day. But a petition of this kind is a dissent, not merely from the Bryan, but also from the Roosevelt policies.

What particular merit is involved in returning a tainted campaign contribution to its stigmatized owner, we confess ourselves not quite able to see. When Mr. Bryan, like angry Jove, announces that Mr. Ryan shall have his maculated money if it be proved that Mr. Ryan did shed his bounty over Nebraska, it amounts at the best to a locking of the stable after the horse is stolen, to a surrender of the cake that you are caught with in the pantry, to the fashioning of a very thin virtue out of a very robust necessity. For the gravamen of the charge that this or that predatory interest has lent its support and its funds—E. H. Harriman to Mr. Roosevelt, or Thomas F. Ryan to Mr. Bryan—is not so much in the evil actually wrought by the particular sum of blood money, as in the fact that predatory interests should think it worth while to adhere and bear aid and comfort to the particular politician under fire. If a man should be accused of burglary and an accuser should come and testify that he had supplied the ladder and held it in place while forcible entry was made, it would do the accused little good to say, "Here, take back your confounded ladder."

The monthly "condition estimate of the Department of Agriculture shows the highest promise for winter wheat since the "record" wheat year 1901; the condition of spring wheat has never but twice been equalled at this time of year in a decade past; the yield of oats, which failed so signally last year, seems likely to be the largest ever harvested. It is still too early to reckon with confidence on the realization of all these hopes; spring wheat and corn are not yet out of danger. But it is possible to say that the outlook is the very brightest. This promise comes, moreover, at a time when the smallness of the supply of grain—owing to the general shortage of 1907—guarantees remunerative prices. If these expectations are fulfilled, we shall have the natural process of financial recuperation powerfully assisted. It was a harvest of this character which insured the success of specie resumption in 1879, which in 1891 probably postponed for two years the panic that came in 1893, and which started the industrial revival of 1897. Nothing could be more reasonable than that mercantile industry, in the Middle West especially, should begin to stir. But even with this hopeful outlook, the country's purchasing and consuming power is not to be restored in a day, after such a shock as last October's. Our industries still have a fairly long road to complete recovery. The steel trade is yet in great depression; the railway business shows few signs of encouragement; both of them need all the help that a great harvest would give to them and to general trade. But if all goes well during the next few months, in agriculture and in politics, steady recuperation is probable.

The cut in the price of steel products is a matter of general interest, chiefly because of its bearing on the announced policy of the United States Steel Corporation and the group of other manufacturing concerns which dominate the trade. Early last April, after a meeting of these manufacturers in this city, Judge E. H. Gary of the Steel Corporation declared that no reduction in prices would be made from the level maintained in the prosperous period of the year before. The fact that supply had run beyond demand was not, he stated, an argument for lowering prices; no more steel would be sold because of the reduction, and stability of prices—"avoidance of violent and sudden fluctuations"—was equally in the interest of manufacturers and purchasers. At a further conference, late in May, this position was reaffirmed, in the statement that "prices of steel are reasonable, and should not be reduced"; that most customers "do not expect, or desire, any change"; and that conferences on the question would therefore be discontinued for the summer. These statements throw a curious light on the sudden cut, last week, in the price of steel bars, followed this week by an inevitable cut in other forms of steel. The first reduction was officially explained as due to the fact that some smaller manufacturers of steel had been selling bars at the lower price to meet competition of the iron-bar makers; and that the larger steel men had decided to hold their own in the market. This is precisely the language usually employed to explain why a corner in any commodity has broken down; and this inference is confirmed by the second reductions.

Already those interested in a high tariff are taking sly satisfaction in the unprecedentedly large appropriations by Congress. They will, it is said, make reduction of the tariff impossible. The bigger the deficit, the higher the tariff. What if Congress has voted 70 per cent. of all our revenue for war purposes? This will so put the Treasury to its trumps that, instead of cutting down customs duties, the only thing to do will be to raise them. Thus extravagance will redound to the greater glory of the standpatters. The fact that their argument is fallacious will not prevent its being used. A finance minister with a free hand and a clear head would like nothing better than the job of so revising and reducing our tariff as to make it yield a much larger revenue. But it is not that point which we would at present urge. What these smug people should consider, who are rejoicing in a spendthrift policy because it seems to favor their personal ends, is the fact that it will also favor ends which they profess to hold in alarm and abhorrence. For wanton voting away of the public money is a direct encouragement to the schemes of Socialism. The higher the burdens of the taxpayer are heaped up, the readier will be the Socialists to pile on more, and to assert that when so much money can be found for wasteful expenditure, still more can be got by taxation for state purchase of private enterprises. One of the most powerful arguments against Socialism is the need of economy; but if we snap our fingers at economy, what answer have we left when the Socialists ask us why we are not willing to expend millions upon social reform—such as old-age pensions and provision against sickness or disability? "Who will pay the bills of Socialism?" That is a question which has never been answered. But our standpatters who are rejoicing in the Treasury deficit, our ambitious military Presidents who insist upon spending money which we have not got, to build ships which we do not need—these are showing the Socialists how, if not to answer the question, at least to dodge it. They will say: we will not pay the bills at all. We will do as you do, leave bills unpaid, let the deficits pile up, trust to posterity to find a way out of the muddle, by either repudiation of debts or confiscation of property. The extravagant statesman is, we know, like the private spendthrift, capable of nearly every form of folly, but we should hope that no one of them will much longer be such a fool as to imagine that his own extravagance can be used as a valid argument why others should be frugal.

That a reduction in our foreign postal rate for letters should be first arranged with Great Britain, is not due to mere sentiment. Both countries have for a long time been distributing mail at a two-cent rate over a wide area and in large quantities—the United States to Canada, Mexico, and our own possessions beyond the seas; and Great Britain throughout her extensive Imperial domains. In addition, of course, there is the fact that the volume of postal communication between the two English-speaking countries is larger now, and is capable of far greater expansion, than is the case with Germany. International correspondence is naturally largely conditioned by the degree of commercial intercourse, and our foreign commerce with Great Britain in 1904-05 amounted to $700,000,000, while that with Germany was a little over $300,000,000. On the number of European immigrants into this country would also largely depend the volume of postal communication with their different countries. Since 1900 we have received from Germany some 270,000 immigrants, and from the British Isles over 645,000.

Dispatches from the fleet on the Pacific Coast report a feeling among the officers that all of the battleships will not, in the end, be brought back to the Atlantic. It is expected that the sailing for Honolulu, Japan, and the Philippines will be made according to schedule; but after that there may be a change in the published plans. To leave enough ships in the Pacific for defensive purposes, could not be construed as a threat to Japan or any other country. It would be simply a measure of precaution, and would tend to allay both the apprehensions of the people on the Coast and the clamor for an immediate doubling of the navy. If all of the battleships were kept in Pacific waters, it might be alleged that aggression was clearly intended; but retaining only a small fleet would be open to no such interpretation. This plan for distributing the vessels ought, we think, to be carefully considered by the naval authorities.

The announcement that the State Superintendent of Banking, acting as receiver in the insolvency of the Home Bank of Brooklyn, has liquidated its accounts and restored it to its owners with a cost of $1,190, of which $666 was receiver and counsel fees, appears as the first fruits of the new banking law. No provision of that act was more angrily opposed by the professional politician than that which committed to the State Department of Banking liquidation of failed banking institutions. To see these rich political "plums" disappearing was enough to excite wrath. With the Knickerbocker Trust Company receivers, appointed before the enactment of the law, asking $300,000 for their five months' services, and with recollection of what political debts have been paid in the past by appointment of bosses, large or small, to sinecures of this sort, the feeling of the politicians over such a showing as that of the Home Bank must naturally be mingled contempt and exasperation. Even the minor insolvencies which helped along worthy private secretaries and retired dancing-masters are to be handled with this shameful parsimony by the Department. Every one will recall Attorney-General Jackson's declaration, in April: "This is the worst legislation that has ever been passed." The sentiment of the general public, any one of whom may some day be a stockholder or depositor in a crippled bank, and whose share in the funds recovered can no longer be taxed for the benefit of political jobs, will be somewhat different. Of one thing we may be sure: the new law, thus vindicated in its results, has come to stay.

It used to be a standing boast of the Socialists that their political strength never experienced the more or less violent fluctuations which are characteristic of every middle-class political party. Temporary issues or the whim of the electorate might cause the scales to vacillate between Republican and Democrat, Tory or Liberal, Centrists or Agrarians, whereas the growth of Socialism was steady and unmistakably indicative of a rising tide of social discontent. But the history of international Socialism during the last three years demonstrates that it, too, has come to be characterized by the same flood and ebb of success as the older organizations. The British general election of January, 1906, brought forth a lusty young Socialist party in the one great European country where the Marxian teachings had made least progress. Yet just a year later came the German elections and the cutting down of the Socialist strength in the Reichstag from eighty members to forty-three. That was in January, 1907. In May the first Austrian elections on the basis of the new manhood franchise took place, and a Socialist party of over eighty members made its dramatic appearance in the Reichsrath. Whereupon, in Great Britain, an anti-Socialist reaction began which manifested itself in municipal and parliamentary bye-elections. Finally, there were the French municipal elections of about a month ago, in which the Socialists met with serious reverses. But, while the press is still commenting on the outcome in France, the Belgian elections of last week give the Socialists a gain of five Deputies out of a total of eighty-one voted for; and as a result of the elections in Prussia a half-dozen Socialists have at last broken into the serried ranks of the Junker Diet.

The success of the German Social Democrats in forcing their way into the Prussian Diet is a spirited reply to the Chancellor's assertions that his last year's victory in the Reichstag's elections meant a permanent check to their progress. The incident is the more remarkable because this is, we believe, the first time Social Democrats have sought a representation in that body, and because the indirect franchise, strictly limited to persons of property qualification, made it the more difficult for them to succeed. It must show Kaiser and autocracy that the Social Democrats are by no means to be characterized as merely ignorant or unemployed, or to be dismissed as traitors to the country. One explanation of this outcome is that, owing to the Liberals having joined forces with Von Bülow in his "block" policy, and the continued breaking up of their forces into small groups, many Liberals and Radicals who do not believe in Socialism are voting the Social-Democratic ticket because of that party's energy and fearless opposition to the forces of reaction. But those are wrong who think that this victory means that Von Bülow will let the people have their way in regard to the reform of the Prussian suffrage, for which the Berlin mobs clamored last winter. It will, rather, be cited as fresh reason why the government should put up the bars instead of letting them down.

The Czar's journey to Reval to meet King Edward has an interest not altogether connected with foreign affairs. That he should venture to make the trip by train, after nearly four years of abstention from passenger cars which may be derailed and bridges which may be blown up, shows how confident the government is of having the terrorists well in hand. The Czar's courage is all the more commendable in that his way from St. Petersburg to Reval lies through a section of those Baltic Provinces which more than any other part of the Empire have been racked with the pains of revolution and repression. It was in the Baltic Provinces, and in the very Esthonia in which Reval is situated, that Socialist "republics" arose during the winter of 1905-06. Revolution, or jacquerie, almost swept the country clean of Russian officials and German landlords. Then came the army of "pacification" under Gen. Orloff. His sanguinary record suffered no occultation under his successor, Gen. Beckmann, whose services have since been rewarded with appointment to the Governor-Generalship of Finland. The thousands of peasants and townspeople who were put to death by the Orloff and Beckmann courts-martial cannot have exhausted the number of those who two years ago upheld the United States of the Baltic. The hatred for the autocracy must still be lingering there; but no attempt on the life of the Czar could now hope for success. The machinery of revolution has been destroyed, and the spy system is completer than ever.

The motion recently submitted to the Russian Duma, calling for the exclusion of Jews from the military service, was defended by two arguments: The Jews were declared to be unsatisfactory fighting material, and to act as disseminators of revolutionary ideas in the army. It was stated that during the Manchurian campaigns the Jewish soldiers, of whom Kuropatkin had about 35,000, not only failed to hold their ground under fire, but by their timidity threw their comrades into panic. But good evidence can be cited from the correspondents of the *Novoye Vremya*, an Anti-Semitic organ, to the effect that among the Jews were found many "intrepid and intelligent soldiers," and that a number of them were awarded the St. George's cross for gallantry. That the Jews have preached sedition in the army is not, of course, to be denied; but if the Russian reactionaries think that by purging the army of Jews they will be casting out all the devils of discontent with them, they are underestimating the resourcefulness of the revolutionary agitators and the extent to which the leaven has already worked on the masses of the true Orthodox. The records show that up to the accession of Alexander III. in 1881, the Jews, while constituting less than 4 per cent. of the population, supplied 5½ per cent. of the recruits. Only unbridled oppression has driven them into revolution. There they have displayed a talent for organization and strategy which, directed in loyal channels, Russia might have found useful in the war against Japan.

The honor of the French army has once more been vindicated by an Italian journalist who couldn't shoot straight. The attack on Alfred Dreyfus is so mad a piece of policy for the reactionary parties in France that even their ten years of ineptitude make it scarcely conceivable that any responsible anti-Republican element was behind the assault at the Panthéon. Desire for notoriety on the part of the would-be avenger of national honor should be sufficient to explain the act. Paris has, after all, a very yellow journalism, in the sense that editors and reporters are much given to self-advertisement. The custom of signing a writer's name even to "stories" of third or fourth-rate importance encourages a fine peacock vanity in the *journaliste* who often plays the leading part in his own contribution. The temptation is strong, when news is wanting, to make news, not in the sense of absolute invention as practised by our own "yellows," but by actually creating the sensation to be chronicled. At the time of the Separation troubles two years ago, it appeared as if French church-goers were made up almost entirely of newspaper men, to whom the closing of the churches came as a terrific blow. A reporter would hit a Republican Guard with a cane and then deliver a violent harangue on country and religion, which was already probably in type at the office waiting to be released. A long and intimate interview with the favorite actress at the Variétés one day, and a riot in defence of the nation's honor the next, would seem to be part of the Paris *rédacteur's* routine.

The case of the late Sir Redvers Buller illustrates the soundness of Pope's advice about not being the first by whom the new is tried, when applied to warfare under modern conditions. The general whose fortune it is to direct the opening operations of a war runs the heavy risk of paying with his personal reputation for the initial blunders that sometimes seem almost essential to ultimate success. Wars have at all times opened with the blasting of old reputations and ended with the establishment of new. This is particularly true in modern times, when the pace of fighting has been accelerated with the general pace of life, when cable and telegraph are prompt to report the slightest check to an army or mistake on the part of a commanding officer, and a high-strung democracy calls for immediate results. Without absolving Gen. Buller from serious error, or offering disparagement to so great a soldier as Lord Roberts, we may still doubt the result if the latter had been entrusted with the British command at the outbreak of the war. Would the hero of Kandahar have learned all the lessons of a new country and a new enemy without paying part of the price Buller had to pay? Later, when Lord Roberts finished the war by his deliberate, clear-sweeping march across the two Boer republics, popular opinion did not accuse him of unnecessary delay, or of insufficient success at any one point. Mindful of the past, England was prepared to be content with something less than all. France in Madagascar and Germany in Southwest Africa had to shift generals before victory was secured. What Grant could have accomplished as commander-in-chief in 1861 instead of 1864 is an interesting speculation.

THE MORALITY OF COMPETITION.

At the recent conference in this city of the Christian Socialist Fellowship the question of the relation of morals to industrial competition was again raised. The reports of the conference make necessary the separation of several ideas which were there blended inextricably. It is one question whether Christianity either historically or logically involves the acceptance of Socialism. It is another distinct question whether competition contravenes the motives which ought to actuate mankind in their social relationships. It is still a third whether Eugene V. Debs should be elected President of the United States.

If the argument be valid that competition in the long run produces plenty and cheapness—an inference one might plausibly draw from the denunciation of monopoly in the conference—we are driven to the curious paradox that the material welfare of this world is at war with essential morality. Those who accept this conflict are bound either to show us some more excellent way—possibly coöperation—or to acquiesce in a more scanty provision of material goods for the race. There are probably few who will adopt the last alternative. It therefore behooves the repudiators of competition to demonstrate the possibilities of coöperative production and distribution.

But this practical difficulty of finding a substitute for competition does not entirely lift a vague burden from the minds of many thoughtful people. They have an uneasy feeling that competition is a contravention of the Golden Rule, that the spirit of gain is opposed to the spirit of service, that self-interest is the antithesis of self-sacrifice, and that between trade and benevolence there is a great gulf fixed. They combine the false axiom that "trade is war" with Gen. Sherman's remark that "war is hell," and draw a very unpleasant conclusion. For those of this way of thinking there are several points worthy of consideration.

First of all is the fact that competition in business often involves no feeling of personal ill-will, or even the consciousness of personal rivalry or hostility. Prof. Charles H. Cooley, in his excellent study of personal competition remarks wisely that "in great measure the selective process [of competition] operates without any conscious clash of personal aims, and therefore without generating any personal feeling"; and that "most men look upon social conditions under which they work very much as the farmer looks upon the weather and other natural agents. They may make him or mar him, and he thrives or suffers accordingly; but there is no single person to hold responsible." Where competition is open and aboveboard, ill-will is much less than where the game is partly under cover, as witness the friendship between opposing attorneys, contrasted with the inroads which the "green-eyed monster" sometimes makes in the medical profession.

Moreover, competition is an ineradicable trait of human nature which will persist under all conditions. The politician's aim for place and power will continue under Socialism. The opposite to competitive self-realization is not altruism, but quietism; not the active benevolence of the missionary, but the passive evaporation of the recluse. Competition being thus certain to appear under one guise or another, the real question is whether it is kept within proper bounds. Men are therefore to be esteemed not because they abstain from competition, but because they hold in due check that fierce desire for supremacy which ravages so many souls. Sterne, in his "Sentimental Journey," says finely of the "clay-cold heads and luke-warm hearts" who can argue down or mask their passions:

> Whip me such stoics, great Governor of nature! . . . Wherever thy providence shall place me for the trials of my virtue—whatever is my danger—whatever is my situation—let me feel the movements which rise out of it, and which belong to me as a man; and if I govern them as a good one, I will trust the issues to thy justice, for thou hast made us, and not we ourselves.

Moreover, let the honest soul who has misgivings as to the morality of competition take comfort from the thought that its moral character may be judged not only by the eagerness to gain wealth, but also by the motive which prompts legitimate acquisition and the spirit in which fairly-won wealth is used. The college student who works his way through college is anxious to make money. Yet his ambition is not the index of a sordid thirst for money, but an honorable desire for knowledge. What St. Bernard says of knowledge may be rightly transposed to meet the case of competitive wealth-seeking: "There are some who desire to gain wealth with the sole purpose that they may gain, and it is selfishness; and some who desire to gain wealth that they may be known, and it is base ambition; and some who desire to gain wealth that they may dispose of their riches for still greater riches, and it is miserliness; but there are some also who desire wealth that they may use it worthily, and it is prudence; and some who desire to gain wealth that they may help others, and it is charity."

BEGINNING WITH HOPS.

The agitation for protection in England has recently centred upon the concrete case of the Kentish hop-growers. They have been suffering because foreign hops, particularly those from America, have been "dumped" in London at a price with which Kent cannot compete. The Kent farmer is said to spend £2 15s. to produce a hundredweight of hops, and he cannot get his money back. Naturally, the Conservatives and their Tariff Reform League have become extremely sympathetic, and their platform orators have joined the protectionist press in crying for a duty of, say, £2 a hundred on hops. According to the theory of economics held by our own Speaker Cannon and Representatives Payne and Dalzell, the proposed impost is the simple and obvious solution of such a difficulty. If profits are falling in any industry, clap on a duty or increase the old one; and, incidentally, exact a contribution to the party campaign fund.

But to some English economists the matter does not appear so beautifully clear. They are pointing out, in the first place, that the trouble in the hop market is very widespread. Indubitably, there has been over-production, the effects of which are by no means confined to England. The New York *Journal of Commerce and Commercial Bulletin*, for example, is authority for the statement that the hop acreage in this State will be reduced this year by from 8 to 10 per cent.; in Oregon, by 10; and in Washington, by 30 to 40. The *Journal of Commerce* adds that the industry is "in a bad way" and that a reduction of 50 per cent. "would be none too much." Such a condition of affairs must trouble the orthodox protectionist, for the hop-growers of the United States ought to be more than happy, with a duty of $12 a hundredweight on hops. That duty, however, has not saved us. Why, then, should Englishmen look to it for salvation.

The real cure is pointed out by a hard-headed "Kentish Farmer" in a letter to the London *Spectator* of May 23. He argues that Kent is not adapting its agricultural system to present conditions:

> If Kent and Herefordshire are unable from defects of climate and soil and cost of labor to compete on equal terms with the Pacific slope or with the plains of Hungary, let them turn their acres and their hands to other crops and other products for which they are endowed with natural advantages superior to any foreign competitor—to the produce of the dairy and the poultry-yard.

The people of Kent have been planting hops from time immemorial, and they seem to think they can do nothing else. The "Kentish Farmer" insists that if his county will devote its energy to butter, cream, cheese, eggs, and chickens, it can, with its soil and its climate and its nearness to the great London market, "defy foreign competition." In sticking to hops Kent is acting with scarcely more wisdom than if it attempted to rival the West Indies in pineapples and bananas. The force of this argument as to the necessity of changing crops must come home to every American. Since the opening of the West we have seen enormous alterations in the conditions of agriculture in the East. Broadly speaking, it is no longer profitable to plant wheat or Indian corn in New England or the Middle Atlantic States. The grain from the prairies can be laid down in New York and Boston too cheaply. The farmers of this region are finding their prosperity in entering the field which the "Kentish Farmer" suggests. The dairy, the poultry-yard, and the market garden are the sources of income on which they must rely. If the principle of protection had been rigorously applied, we should have cut this country up into tariff zones and made the tax on wheat and corn high enough to keep out the products of the West. The absurdity of such a performance is clear enough from a bare statement of the facts. Yet the word "foreigner" has in it a magic that stirs our blod as it stirs that of the hop-growers of Kent, so that we are blinded to the reality that our tariff is a system of folly, waste, and robbery.

Far-sighted Englishmen see, of course, that, if once they set foot in the path of protection, they must follow it to the bitter end, as we have done. If the hop-grower is protected, then the English wool-grower must also have a tariff to keep out the clip from Australia; and, if the wool-grower is looked after, the cattle-raiser will ask that American beef and South American hides be put on the list. And so the process will go, as this country has seen it since the civil war, in an ever-widening circle. One interest after another has made its peace with the Republican party, has dictated its schedule in the general tariff bill, and has then paid handsomely at Presidential and Congressional elections for the privilege of battening at the expense of the country as a whole. Thus little by little we have built up a vast fabric, so complex that the very architects of the structure dare not alter or even touch it, for fear that it will come tumbling about their ears. We have now begun to talk as if a protective tariff were a beneficent force of nature, like the sunshine and the rain. We have made it a substitute for human energy and intelligence. If we lack the muscle and the brain to match the foreigner, we appeal to the tariff as to a tutelary deity. Indeed, we have finally come to deify it and declare it the be-all and end-all of government. We have reached the mental attitude of Sir William Lyne, whom Lord Cromer quoted in a tariff debate in Parliament the other day. Sir William voiced the exact sentiments of our stand-patters when he said: "If I can make the tariff prohibitive, I shall be glad. Importers are parasites on the trade of the Commonwealth." We begin with a little duty on hops, and we end here.

CLAUDIAN ON THE THIRD TERM.

We are informed that the President's latest letter saying your candidate I cannot be, will not be given out. It was written to an ardent supporter in West Virginia. Exactly what form of refusal Mr. Roosevelt adopted, is not yet known, but, with his well-known fondness for the classics, it would not be surprising if he referred the West Virginia delegate to a poem of Claudian's. We mean that writer's panegyric on a Roman Consul, Flavius Mallius Theodorus, in which one certainly finds an extraordinary forecast of a later Theodore, with much matter bearing on the career of our President and the present political situation.

Aided by a sub-freshman who has just passed his entrance examination in reading Latin at sight, we have been able to make out a remarkable parallelism between the ancient Theodorus and the modern. The one of the fourth century was also a great naturalist ("docuit toties a rure"), a mighty hunter ("conveniant ursi"), an intrepid explorer of the wilderness ("silvestribus antris"), but likewise a profound student ("incumbit studiis"), and a weighty and eloquent writer ("gravissimus auctor eloquii"). In the higher flights of oratory ("immensum per inane volet"), he knew Montaigne's difficulty of coming to a stop ("finemque perosus"). Personal traits appear similar. Claudian's Theodore, too, was a man who never sought and was never deceived by popular acclaim ("nec plausu petit clarescere vulgi"), and was opposed to all impetuous methods ("violenta nequit").

It is, however, in their official capacity that the two Theodores move in orbits which frequently and strangely cross each other. In Claudian's lines, one repeatedly comes upon expressions that read like comments upon present-day politics. The Roman Consul, like the American President, was much given to talking about the square deal ("norma boni"). He was not afraid of assuming power ("sumpsit imperium"). He was a great hand at lecturing mothers and laying down the law in regard to race suicide ("matribus et sexum leges severæ"). Furthermore, our assistant translator assures us that in the matter both of public policy and official experience, the fates of the Roman and the American seem wonderfully alike. What appears more modern than the improvement of our waterways? Yet the President was anticipated by the Consul who long ago saw how money could be saved in river freights ("quidquid fluviis evolvitur auri"). But it is positively startling to read that the elder Theodore had trouble about the commissions of his generals in the Philippines—at least, our sight-reader thus renders: "Tantaque conmissæ gaudia . . . bellante Philippo." And he is certainly on firm ground when he sees an ancient Brownsville case in the line: "Hic te pars Libyæ moderantem jura probavit"; or, in English, "A portion of the colored vote swore it would not approve of your candidate." Big-navy troubles were also his—"Hispana tibi, Germanaque Tethys, paruit et nostro diducta Britannia mundo." And the Theodore whom Claudian praised was also plainly skilled in practical politics—"quo vivat machina motu."

The parallel really approaches the miraculous when it comes to the question of a third term. Theodore the Consul had been twice in office ("bis laudatura regentem"). But the third-term boomers were thick in the land. Some antitype of Senator Bourne, or Cecil Lyon of Texas, or the megaphone-voiced George A. Knight of California, lifted up the cry: "Nobiscum, Theodore, redi." But the appeal was resisted with Roman firmness, then as now. And the poet could but applaud the determination to lay down official cares. He clearly saw that nothing was to be gained by accepting a third term, and wrote:

> Nil jam, Theodore, relictum,
> Quo virtus animo crescat, vel splendor honore.
> Culmen utrumque tenes.

We freely offer these verses to any who may desire to make use of them. They might be gracefully embodied in the Republican platform. If Senator Burrows wants them for his convention speech, with his old habit of laying hands upon a good thing when he sees it, we place them at his disposal. But their greatest utility would be, we think, when printed on a card and sent by Secretary Loeb to all anxious inquirers whether the President really means it. If the Latin is too much for the average third-termer, there might be substituted a translation by one of our office-boys, of which we give only the first line, rendering "nil jam, Theodore, relictum":

> Nothing to it, Teddy. you've got 'em all licked.

MAKING RELIGION YELLOW.

Reports of the recent address of the Rev. "Billy" Sunday to the Presbyterian ministers of Pittsburgh, bear out the study of that popular and successful evangelist which appeared not long ago in the *American Magazine*. They have the same easy command of the slang and vociferousness of the "bleachers," from which Mr. Sunday derived glory or shame in the days when he was a professional baseball player; the same sure sense of what will read well in sensational newspapers. He assured his clerical hearers that they were mostly "fudge-eating mollycoddles." Few clergymen, he asserted, are nowadays anything but "stiffs and salary quacks." As for professors in theological seminaries, the thing to do with them is to "stand them on their heads in mud-puddles."

Let no incredulous reader think that Mr. Sunday is merely an isolated freak. He is a recognized power in the religious life of the West. The renown of his revivalist campaigns in Western cities was what led the Pittsburgh clergy to invite him to address them; and it was doubtless their awe in the presence of one who had, as he would say, "delivered the goods" in a hundred churches, which led them to sit silent under his insults. The Rev. Mr. Sunday has swept everything before him in town after town of Illinois, Minnesota, and other States. He has gathered all the Protestant denominations in a given place into his work, had them build him a "tabernacle," and in it has held meetings three times a day for weeks at a time, kindling enthusiasm and winning converts by the hundred. Yet throughout his preaching, and, indeed, his praying, he uses every vulgarity and irreverence of language, addressing his hearers, and the Almighty, in the idiom of the saloon, the gutter, and the yellow newspaper. One Western audience he recently carried by storm with the assertion that he was going to stay in that city and preach "till hell freezes over, and then I'm going to get a pair of skates and keep on soaking it into Satan."

All this is surprising enough, but the really amazing thing remains to be told. This garrulous blackguard of the pulpit, who is all adrip with street-slang; who claps the dread Jehovah on the back, and smears the most sacred things with his coarse blotch of vulgarity—this man is admired and endorsed by religious leaders. Clergymen vie with denominational journals in lauding his wonderful works. Some of them feel compelled to disclaim approval of all his "methods," but they confess themselves stricken dumb by his extraordinary results. He makes religion the sensation of the hour. His sacrilegious quips are echoed in the yellow newspapers, for whom he makes the best pious "copy." He gives to the gospel an immense publicity of a kind it never enjoyed before. How, then, can those interested in the spread of Christianity fail to rejoice at the marvel of thousands of people who will not go to church, thronging to hear Mr. Sunday tell them about the religion of Christ in the language and with the reverence of a newsboy or a 'longshoreman? There have been many tearful ejaculations, in connection with the Rev. "Billy," about God having chosen the foolish things of this world to confound the wise.

This defence of yellow religion sounds much like the common defence of yellow journalism. "Oh, well," people say, "we admit that it is vulgar and demoralizing, but just see how it circulates!" So the Rev. Mr. Sunday grates upon fastidious Christians, but only consider how he catches the crowd. In neither case is a thought given to the necessary tendency of what is essentially indecent and blasphemous, disguise it by what name we will. It is the old fallacy of noise and numbers. Your yellow newspaper man fills the land with his stridulous voice; your yellow novelist sells by the hundred thousand; your yellow professor in the university has his classroom thronged, and his bizarre opinions telegraphed over the country, while his sober colleagues are deserted; your yellow politician splits the ears of the groundlings and is the greatest "headliner" of the day; therefore, why should not the yellow revivalist win money and glory and the applause of the devout? Success is the one touchstone for religion, too; and the only success worth having is shouting thousands. That old notion about the Lord being in the still small voice is absurdly obsolete. How are you going to fill a church, we should like to know, without a brass band and a vaudeville performer? This is an intensely practical age, and it is not going to be too nice in criticising a man who can show "results."

It is not really strange that religion should begin to turn sensational. What we cultivate or run after in every other walk of life, we cannot keep out of our churches. After making culture "hustle," the next thing is to make religion "hum." The Rev. "Billy" Sunday is only a kind of prophet in the yellow wilderness. He has merely learnt the lesson of sensationalism, and is applying it to the saving of souls. That he tears up, in the process, all real religion by the roots, does not matter. He has the gaping crowd; therefore, the Lord must be with him.

HISTORIC DOUBTS CONCERNING HISTORICAL SAYINGS.

Another famous utterance of a noted man has just had discredit cast upon it. MacMahon's splendid answer in the Malakoff, "J'y suis, j'y reste," is now alleged to be one of those good things which the reputed author would have said if he had only thought of it in time. The doubt is raised by the memoirs of the Marquis de Castellane, now in the course of publication in the *Revue Hebdomadaire*. It appears that when Marshal MacMahon was President of the Republic, the Marquis had to make in the National Assembly a speech in which he intended to urge an enlargement of the powers of the executive. The orator desired, he says, to get hold of some sort of epigram to drive home his point, and, like a good husband in difficulties, consulted his wife. The Marquise made a happy suggestion:

> On the following day I made my speech, and this was my peroration: "Do to-day for France what MacMahon did sixteen years ago for the army at the Malakoff. He was the first to enter the citadel. It was mined. It seemed about to bury him in its ruins. But no matter. He ran to the telegraph and sent his chief this message, sublime in its simplicity: 'J'y suis, j'y reste!' "

The Marquis declares that the effect of his climax was "indescribable." He adds that "the newspapers have ever since insisted upon the historic phrase which the Marshal never uttered, but which my young wife invented for my use."

This is, of course, by no means conclusive. There is independent evidence that MacMahon actually said something of the kind. A surviving eye-witness, Gen. Biddulph, has written describing MacMahon's "admirable calm" amid the terrors and dangers of the Malakoff, and asserting that he sent a message to English headquarters not unlike the saying attributed to him. It would not be surprising, however, if the compact and epigrammatic form of the phrase was later born. At a critical hour, soldiers are not so careful of what they say as of what they do. It is not so much what we say here, as what they did here, said Lincoln at Gettysburg; and the remark points to a real distinction between the maker of phrases and the doer of deeds. Neat sayings by great workers are always a little suspect. Orators are different. Whatever doubts we may have about MacMahon putting his words crisply together while the fortress was crashing around him, no one has ever questioned the authenticity of Gambetta's challenge to the Marshal-President: "Il faut soumettre ou démettre." This recalls the taunt which Cobden hurled at Wellington, when he said that, however great a conqueror that soldier had been in fighting aliens, he had never engaged in a political contest with Englishmen without being beaten.

Wellington, too, was furnished by tradition or myth-makers with many sayings which his own lips never coined. He would not publicly discuss them, but in private he repudiated them. To be asked if he really shouted out at Waterloo, "Up Guards, and at them!" filled him with more disgust than it did to be inquired of by an old lady whether he hadn't been frightened in that battle. As for the French Old Guard at Waterloo, and their supposed majestic refusal to surrender, historic research has amply shown that the consecrated words never came from those simple-minded veterans, but were the invention of a journalist far away and safe in Paris. Parallel with this was the supposed glorious sinking of the Vengeur, with its defiant and heroic crew, which Carlyle exploded over, only to find later that the whole thing was a fabrication of Barrère's. "Reader! Mendez Pinto, Münchausen, Cagliostro, Psalmanazar have been great, but they are not the greatest. O Barrère, Barrère, Anacreon of the Guillotine!"

In these historic phrases which the

skeptical investigator shows to be wanting in contemporary proof there is, nevertheless, almost always a kernel of truth. A battle, some fine action, takes place, and we know that the actors in it must have said something; then comes the mythic faculty and the literary instinct to make them say the thing we wish they had said. Usually, what the admiring chronicler or embroiderer does is to seek for nice statement, for point, for compression, in the sayings of great men at great emergencies. Those utterances are, in fact, apt to go lamely; to be diffuse. The task of the *sacer vates* is to turn them into epigrams. Nelson's famous signal has gone into the histories in a form different from the one in which it actually flew from the Victory. It is a kindly work of the historic imagination. "In history, I care only for the anecdotes," said Prosper Mérimée. That is the common taste; and the inventors of historical sayings, from Thucydides to the Marquis of Castellane, know what they are catering to.

THE WERGELAND CENTENARY.

June 17, 1908, is the centennial of the birth of Henrik Wergeland, the Norwegian poet and patriot. In Norway the day will be generally celebrated, and a statue in bronze by Gustav Vigeland will be unveiled at Christianssand. On the same day similar exercises will be held at Fargo, North Dakota. In that city will be erected a replica of the original statue, a gift from prominent Norwegians to their kin in the United States.

Norway some eighty years ago presented a very different picture from the Norway of to-day. A new era had begun, ushered in by the momentous events of 1814; but the nation was still in swaddling clothes. Unaccustomed to the exercise of independent political functions, the people were cautiously feeling their way. From the point of view of culture also Norway was backward; but there was a genuine desire for education. Naturally the professional classes, lawyers, doctors, clergymen, were the intellectual and political leaders. At the same time, however, the common people, the farmers, began to assert themselves as an integral part of the body politic.

The state university, the only institution for higher learning in the country, established at Christiania only three years before 1814, was the intellectual centre of the nation. Life among the students, however, was not on a high plane. The ebullition of youth, the crudeness of society, the turbulent condition of Europe, following upon the French Revolution, and the Napoleonic wars—all these causes contributed to make the students somewhat strenuous and roistering. The students had also a rather exaggerated idea of their own importance, though, as a matter of fact, the whole community watched them with an attention and even deference which might well have turned the heads of older and wiser men. But with all their shortcomings, these students regarded themselves as called upon to raise aloft the banner of the ideal. The nature of this ideal was of course hazy; but, in general, the old revolutionary catchwords of liberty, equality, and fraternity, applied to politics and social conditions, expressed the aspirations of the youth as well as of the mature minds of the young democracy. As to the means of realizing the ideal, opinions differed widely.

Culture in its larger sense was still identified with Denmark and a product of Danish influence. Danish tastes prevailed; Denmark supplied what was commonly accessible in literature; and so strong were the ties with Denmark that a large portion of educated Norway frowned contemptuously upon any attempt to sever them. Norwegian life and letters seemed too crude to do without the inspiration, the refinement, and the guidance of Denmark. Against these views a national movement had begun soon after the separation from Denmark. The ambition was to develop Norway on original lines, to produce something with root in its own soil, meagre though that might be. But as yet this movement had no recognized leader in literature.

Such were the conditions when, in 1825, Henrik Arnold Wergeland, or Henrik Wergeland, as he is generally known, entered the university as a student. Born in 1808, and thus only seventeen years old, he was little more than a lusty lad. But since his education had been the thorough classical drill of the day, he was on the whole well equipped for taking up some profession. His father, one of the leading clergymen of the country, a man of strong personality, descended from sturdy farmer stock, had been an influential member of the convention which at Eidsvold framed and adopted the Constitution of 1814, and he remained throughout his life an ardent advocate of political liberty. Wergeland's mother was a woman of cultivation and refinement. Then, as now, Evangelical Lutheranism was the faith of the established church of Norway, but theology was rather strongly tinctured with rationalism. Thus the home in which Henrik grew up allowed him wide religious latitude, and encouraged the development of that catholicity of spirit, and those humanitarian ideas which form the underlying principles of his writings and his life. Wergeland's early university career was not in all respects creditable. He entered freely into the riotous student life, and his exuberant vitality found an outlet in boyish pranks and in conflicts with the authorities. Yet he pursued his theological studies industriously, and in four years passed the examination which made him eligible to a charge in the established church. This, however, was as near as he ever came to being a clergyman. His opinions, and still more his forcible manner of expressing himself both in word and action, his utter disregard of conventionalities repeatedly blocked his way. Despairing of finding a livelihood in the church, he finally began the study of medicine; but this plan he also abandoned, in order to devote himself exclusively to literature. Later he accepted a position connected with the State Library, but during practically all his mature life—he died in 1845, only thirty-seven years old—he was a free lance in poetry, journalism, and politics. His vigor and productiveness were remarkable.

He was a born poet. While a mere boy he tried his hand at verse; and when he was less than twenty-two, he published an epic of nearly 800 closely printed pages, bearing the ambitious title, "Creation, Man, and the Messiah." That work is now known as "Man," the title given it by the author, when revising and preparing a new edition during his last illness. The poem is dedicated to half a dozen of his contemporaries, as spokesmen of truth, liberty, and love and true followers of Christ. Even in its revised form, the epic is in many respects as chaotic as the newborn world, the creation of which we witness in the opening stanzas. It contains lyric gems of singular beauty, but they have to be laboriously dug from a mass of débris. Through the entire poem, however, Wergeland breathes the message of love and of faith in the ultimate redemption of mankind, in progress, in evolution from baseness to nobility, and in the final assimilation of man with God.

"Man" is Byronic in its conception and execution; and indeed many of Wergeland's poetical writings recall Byron's manner. There is, however, this difference. Byron, the skeptical, critical, dissatisfied spirit remains chained to earth. Wergeland, on the other hand, is always in conscious flight toward the ether. Byron expressed the disappointment of his age; Wergeland voices the aspiration of a nation born in the dark hours of Europe's travail, but full of hope and virility. Moreover, Wergeland was through and through a democrat, not only in theory, but in his understanding of the common people, in his self-sacrificing labor for their physical and spiritual welfare, in his faith in their ability to rise. Indeed, in this respect, he somewhat reminds one of our own Walt Whitman, although of the two, Wergeland was by far the more active and practical. Wergeland took hold and did things, where the other contented himself with mere preaching.

Wergeland's name is intimately associated with everything meaning patriotism, progress, and improving the lot of the humble. Though in politics he was an ardent admirer and a personal friend of the reigning king, he maintained a determined stand on the question of Norwegian constitutional rights and liberties, and his name is, as no other man's, associated with the celebration of May 17, the anniversary of the adoption of the Constitution of Norway. He had the habit of carrying with him seeds of all kinds—flowers, grass, and trees—and of scattering them wherever they were needed. This trait illustrates his whole nature. At a time when animal rights were but little thought of, he urged the cause of dumb creation. To him all life was sacred. To suffering, whether in man or beast, he always responded. He urged more humane treatment of criminals; and when he found his own country closed to the Jews, he made it one of the objects of his life to remove this disability. To this end he drafted bills which were introduced in the Storthing, he set on foot an agitation, and wrote some of his most stirring poems. His labor in behalf of the persecuted people did not bear fruit until after his death, but the first memorial erected on his grave was raised by Jews residing outside of Norway in grateful recognition of his services to their race. On the general lines of good citizenship also, he was incessantly active. As he scattered seeds, so he scattered thoughts. He planned and established libraries in country districts. He urged the development of national industries, and of improved methods of agriculture. And in all these activities he was the practical, commonsense man, mingling with the common people on common ground, winning their hearts by his disinterested and unaffected concern for their wellbeing. Thus it was that Wergeland inevitably became the spokesman of the national movement in Norway. He entered the lists against the notion that intellectually Norway was still a province of Denmark; and he became the champion of a typical Norwegian art, literature, and culture.

The intensity of Wergeland's spirit of nationality is perhaps one reason why his name is hardly known beyond the borders of his own country; but in that country and in the hearts of his own people, it strikes a sympathetic chord whenever mentioned; it stands for all that tends towards growth on national lines, for every endeavor to elevate and ennoble existence. In modern Norway, Björnstjerne Björnson is the only man who occupies a similar relation to his country and people. Ibsen would have stood aloof from or been actively opposed to Wergeland. They were diametrically opposite natures. But Björnson possesses Henrik Wergeland's living faith in the ultimate triumph of mankind; and when the history of their country in the nineteenth century is written, the two men will stand linked together as great forces in the making of the new Norway. J.

LITERARY NEWS FROM PARIS.

PARIS, May 26.

English and American notices of the death of Ludovic Halévy pass over almost altogether his most characteristic work, that which is best known in France, and is already proverbial—in the first stage of becoming a classic, though not precisely for schoolboys. This is his writing about Madame Cardinal and her daughters. The Abbé Constantin is known in well-thinking families, but in boulevard remembrance, in that Parisian world where Halévy, working with Meilhac, earned his fame, Madame Cardinal is the friend of all the world. Probably her like does not exist in the Anglo-Saxon atmosphere storm-tossed from inherited Puritanism to Bernard Shaw's heroines. The Cardinal family belongs to a special category of the half-world—halfway between the low and the proper. The daughters—"Les Petites Cardinal"—are figurantes at the opera, and their interest for boulevardiers presented an occasion for one of the kindliest and keenest satires of the ultra-refined Parisian world which amuses itself. Perhaps we should say which did amuse itself when Halévy had unrivalled opportunity of observing it. For with the republic, with the absence of court influence to keep up the half-world and the elegant world alike to a certain reserve, there is little left between extremes—commercial propriety on the one hand and vulgar dissoluteness on the other. Paris is living over the times of Petronius, who observed that when the gods wished to perpetrate a joke they created a newly-rich Roman to amuse himself. The Cardinal family will remain as the light, effervescent memory of an Imperial day, worthy to be kept in French literature beside its memoirs of the Regency and Louis Quinze. Monsieur Cardinal could not endure the thought that his daughters should write love letters—he would do the writing for them. When Madame has safely bargained them off, these worthy parents buy a little château and Monsieur inaugurates a political career by an exhibition of "anti-clerical fireworks" and a lecture on Voltaire for his country neighbors. The Israelite Halévy did not take Radical Republicanism much more seriously than did the Catholic Coppée.

Both men won their public in the theatre; their poetry or prose came after. This influence of the stage on letters—the drama as an essential part of higher literature—is almost unknown to the present English-speaking world. François Coppée, the poet, came before the world at large along with Sarah Bernhardt. He was already known among a coterie of young writers and a few elder poets that submitted gracefully to admiration; but the great world cared nothing for the loves of his shopkeepers and shoemakers. In lighter vein he had rhymed a Renaissance dialogue and won the sympathy of Agar, a great actress of the time. She took his manuscript, rolled and tied with a pink ribbon, to the director of the state theatre of the Odéon and insisted that he should read it in her presence. As it was short, he yielded; and shortly he fell under the charm of the simple verse, more liquid on the tongue than most of the prose comedies of the day, while the story is as decorative as an Italian art object. Agar would be the heroine, but who should be the page? Agar chose the Bernhardt girl, nineteen, and fresh from the Conservatoire: "She has a golden voice, and we can pin a page's cap in her glorious hair." The resulting little duo was a great success. Poet and page were taken to the hearts of Parisians and have had a warm place there ever since. Agar died in poverty a dozen years ago, proud, fascinating in her quadroon personality to the end.

Among May books of fiction "Le Prix du sang," by André Daverne, is an example of a new literary movement in France. This is a working of the Christian sympathies at the very time when political measures have eliminated Christian ideas from education and public life. The romance is called a tale of the time of the Apostles; but it does not come from a religious publishing house nor has it the family air of religious publications. The literary merits are considerable; the story is very sincere and real in the telling. It is the visitation of the sins of parents on children—in this case, of the executioner of Christ on his daughter Myriam. It is sufficiently terrible in its tragedy of human love frustrated until death, when the Master appears and the father, for whom the daughter has suffered, is saved. It is a curiously modern volume, in spite of its subject and a certain grand air to which we are no longer accustomed. "Mémoires d'une vieille fille," by René Bazin, is one of the slow-moving, kindly, and gentlemanly written romances of this Academician. He deals with modern Christians, not quite Parisian; they love and suffer amid refined surroundings of the provinces nearer to nature. "L'Armée qui souffre" is by Fernand Médine—his third novel. He is steadily making his way, by good writing and an appeal to purely French sentiment in such noble subjects as patriotism. "A Grande vitesse"—a name which recalls both automobiles and rapid express transport in France—is a novel for girls, by Jean Thiéry. "Le Première tentation de Saint Antoine" is the book written by Gustave Flaubert from 1849 to 1856, but not published in deference to friends; for the Second Empire not only protected the young person, but held a censorship over general morals. The book is entirely different from the later work known to present readers; its significance is rather for students of this literary artists' artist. Notes have been supplied by Louis Bertrand, the editor. Maurice Montégut, who for more than thirty years has been writing sensational books without becoming a great writer, publishes a new novel in an historical series where, perhaps, he seeks to find his real way. The series follows the conflicts of Bourbon lilies and Bonaparte eagles; the present story deals with "Les Cadets de l'impératrice."

"Les Vestris," by Gaston Capon, is a book of history, since it is based on police reports of the time and other unpublished documents; but it is quite as lively as the lightest romance. It narrates the strange careers of the dancing family, of which the head declared: "There are three great men in Europe, the King of Prussia [Frederic the Great], Monsieur de Voltaire, and myself." His importance in Paris before the Revolution all but proves his words. The family dynasty is here traced, with very interesting stories, from 1730 to 1808. The book has an index of names, which adds to its serious value. "Muses et bourgeoises de jadis," by Edmond Pilon, recounts what is known of the expansive life of seven sentimental ladies of the late eighteenth century. Madame Denis, Voltaire's niece, who presided over his house; Madame Cottin, "the woman of sensibility," whose limpid stories used to be first books for French reading in English schools; Madame Greuze of La Cruche Cassée; and "Mistress" Cook are of evident interest. More historical and more unedifying are the three men—Napoleon, Neipperg, and Bombelles, with a not quite authenticated tenor—who formed "Les Maris de Marie Louise." The matrimonial fortunes of this singular Austrian princess, in whose make conscience and even feeling seem to have been left out, are treated as sober history by Dr. Max Billard.

A few more very real books have been added to the already long list of recent publications concerning men and things of the French Revolution. The most important is perhaps the Correspondence of Marat (in the series L'Élite de la Révolution), fully annotated by Charles Vellay. It discloses a Marat not hitherto known to general readers—a doctor full of cures, which his friends now assert anticipated Koch's tuberculins and Quinton's salt-sea water—through the stomach, not hypodermically, of course. He was also an upholder of proper thinking about religion! The "Souvenirs de l'Abbé G. J. Martinant de Préneuf" are probably more sincere. They are the everyday reminiscences of a good parish priest, without any theories at all apart from his duties. These he had to perform under difficulties, at Vaugirard, where the Terror found him, and then through eight years (1792-1801) of *émigra-*

tion, living as best he could in Germany by doing any work that came to his hand. This plainly told life of a man who never dreamed he was a subject of history, and who lived afterwards prosaically among the restored clergy of Paris, is full of curiously naïve anecdotes. They are properly introduced and annotated by G. Vanel. The "Souvenirs de la Duchesse de Dino," published by her granddaughter, Countess Jean de Castellane, comprise only the maiden life of the German princess who brought her title and lands to reconstitute the house of Talleyrand. This lady in later and influential years at court incurred the resentment of the lively Countess de Boigne, whose recently published memoirs say things about her demonstrably false This publication has drawn out, but does not contain, her own account of the deathbed "conversion" of the famous Talleyrand, with which she had much to do. It is a piece of history not without value, of a kind still found hidden away among archives of families existing in the France of to-day.

"Mes Souvenirs," by Edmond Biré, are less in the Saint-Simonian mood. Their author is the ferocious critic who subjected Sainte-Beuve, and especially Victor Hugo, to microscopic examination on the score of exact statement—and found them, particularly Hugo, sadly wanting. His book goes from 1846 to 1870, during college and university studies and a career under the second empire. "Waldeck-Rousseau et la Troisième République," by Henry Leyret, follows the life of the great statesman until 1899; it seems to be the first volume of an authorized biography. A pencil design of the great man which is reproduced shows his limitations both in theory and in prophetic outlook. It represents the results which he expected from his laws governing religious associations—Jesuits fleeing on one side, dove-like nuns returning on the other. This must be on the principle: Religion is good for women. The nuns have been dispersed and expelled by more logical politicians, while Jesuits, and others called so, have simply gone to living and working individually.

"Réflexions sur la violence," by Georges Sorel, is a work of political theory, and not of reminiscence, although extremely personal. The author, like most of the *intellectuels* who lead Socialism ever on toward anarchy, springs from the heart of the *bourgeoisie*. Until forty-five he was a government engineer, and his scientific studies are shown in all his writings. It is now sixteen years since he gave himself up to the social revolution: and he has become perhaps the leading theorist of his kind. His present volume is a long defence of the general strike, as the only means to bring property-holders to their knees.

"Modernisme et tradition catholique en France," by Charles Guignebert, touches another timely subject. The author is lecturer at the Sorbonne, where his course on the history of Christianity has, for the university of a neutral state, a strangely polemical character against the Catholic Church. The present work is disappointing, most of the arguments being little different from those in Protestant text-books, which preceded, sometimes by centuries, the pronouncements of Pius the Tenth. Even one who stands altogether *pro fanis* can judge of the worth of an argument which makes the Pope pretend to "inspiration," instead of simple assistance in safeguarding the faith once inspired to the Apostles; after the publicity of the Vatican Council such easy means of controversy ought not to be decorated with the name of learning. M. Guignebert is a university *agrégé;* if he cannot get up his subjects better where living men are concerned, what shall we think of his judgments of the dead? The twentieth year of "L'Année philosophique" of the veteran François Pillon takes us into spheres of serener controversy, concerning Plato and Parmenides and the laws of nature according to Émile Boutroux. The bibliography of French philosophic publications for the year 1907 is distinctly valuable. The entire volume has the tone of philosophers not yet crushed by latest science.

S. D.

NEWS FOR BIBLIOPHILES.

The Registers of the Stationers' Company, as printed and edited by Prof. Edward Arber, give systematic though meagre notes of the English book-trade, printers, booksellers, and short titles of books intended for publication, down to 1640. The Term Catalogues, reprinted by the same able editor, begin with 1668. Between these dates there is a blank during which no contemporary record was kept. This period has to a certain extent been filled by Henry R. Plomer's "Dictionary of Book-sellers and Printers who were at work in England, Scotland, and Ireland from 1641 to 1667," recently published by the Bibliographical Society. The time covered is from the first meeting of the Long Parliament, November 3, 1640, to the Great Fire of 1666, in which books were destroyed, worth, according to Pepys's calculation, £150,000, and most of the booksellers were "utterly undone." During the greater part of those years the laws regarding printing and publishing were so severe that much of the output of the presses consisted of fugitive pamphlets and leaflets, most of which, except for one man's industry and foresight, would probably have been lost. This man, George Thomason, a bookseller, set himself to collect and preserve those "books of an hour"; and in the twenty years, beginning about 1640, amassed 22,255 pieces—14,942 pamphlets and 7,216 newspapers, together with 97 manuscripts. These were bound up in 2,008 volumes. Almost every piece has noted upon it the day upon which it was received. During the civil war the collection was often in danger, and was moved from place to place. Finally, in 1762, it was bought by George III. for £300 and presented to the British Museum. This collection has been the greatest single source of information to Mr. Plomer in compiling his "Dictionary." The imprints on title-pages in the Bagford collection have supplied some names. Of some printers and publishers no information could be secured beyond the name in the imprint of a single book or pamphlet. In the case of many of the more important members of the craft, however, Mr. Plomer gives us a short biography, telling when a man set up in business, what kind of books he printed, and who his successors were. Whenever a volume contains a catalogue or list of books, this fact is noted.

Another volume, completing the publications of the Bibliographical Society for 1907, is a second edition, revised and enlarged, of George J. Gray's "Bibliography of the Works of Sir Isaac Newton." The first edition was issued in 1888. Among other important additions, two issues of the first edition of the "Principia," 1687, differing in the imprint, are described. In the first issue the imprint is in three lines only, in the second in four lines.

A bibliographical curiosity has been found in the possession of Arthur Jeffrey Parsons, a collector in the city of Washington, containing a very early reference to Virginians. That the book itself is intrinsically of small value is not to be considered when it mentions anything American. So we may expect to see this title added to the list of desirable Americana. It reads in full:

> Pathomachia: | or, | The Battell of | Affections. | Shadowed by a Faigned | Siedge de [*sic*] the citie | Pathopolis. | Written some yeeres since, and | now first published by a Friend | of the deceassed Author. | London, | Printed by Thomas and Richard Coats, for Francis Constable, | and are to be sold at his Shop in Pauls Church-yard | at the Signe of the Crane. | 1630.

The authorship is attributed to Francis Constable, for whom it is stated to have been printed; but the British Museum, where two copies are to be found, does not suggest an author's name. Constable was a publisher in London, from 1615 to 1640, and could hardly have been the writer of an allegorical play in five acts, and in prose, such as this volume is. In the Register of the Company of Stationers of London is found the following, under date April 16, 1630:

> Master Constable Entred for his copie under the hands of Sir Henry Herbert and Master Bill Warden A play Called "The Battell of The affections or loves Loadstone."

The American reference is on page 28, as follows:

> *Just*[*ice*]. Come forth Fortitude, lay hands upon this Counterfeit, for this is not the King now I looke better on him.
>
> *Friendsh*[*ip*]. Arrant Traytors, doe not the verie Virginians know that the Person of a King is sacred.

It would be interesting to know what account of Virginia was in the memory of the writer when he made that reference.

An interesting exhibition of illuminated manuscripts, dating from the ninth and tenth centuries to the fifteenth, has been opened at the Burlington Fine Arts Club, London. All the great private and semi-public collections in England, and the finest collection in America (J. Pierpont Morgan's) have sent contributions. King Edward lends from Windsor the famous Book of Hours, written for Margaret of Burgundy, Duchess of Brittany, which is one of the most exquisite productions of French art of about 1425; the Duke of Devonshire, the much earlier Benedictional of St. Æthelwold, Winchester work of the tenth century. Lambeth Palace, the Dean and Chapter of Hereford and Winchester, eight colleges in Oxford and seven in Cambridge, and the Victoria and Albert Museum are among the corporate possessors of old libraries that have sent priceless things. Mr. Morgan took over eighteen of the best manuscripts from his New York library. Sydney Cockerell, in his introduction to the catalogue says that "so many splendid examples of the illuminator's art, and so various in their excellence, have never before been shown in a single room." The exhibition is extraordinarily rich in the English work of the later Middle Ages, and especially that produced by the school of Winchester from the tenth century downwards. It is interesting to learn that from the tenth to the thirteenth century "English manuscripts had so great a reputation as to be commissioned and sought after by the rich nobles of the continent." Afterwards the school declined, and its place was taken by the more highly developed art of the Continent, especially of France and the Netherlands.

Ludwig Rosenthal of Munich has recently discovered in a volume of contemporary tracts a fine copy of the "Epistola Christofori Colom: de insulis Indie supra Gangem nuper inventis." This is the first issue of the dated edition, 1493, of which only three or four examples are known. A facsimile is to be published by Herr Rosenthal.

Correspondence.

GRADUATE STUDENTS AS WRITERS.

TO THE EDITOR OF THE NATION:

SIR: In an editorial entitled "A Graduate School of Authorship," in your issue of May 14, you did me the honor to refer to me by name. If any one is curious to learn my views on the general subject, he may find them in my little book, "The Higher Study of English" (Houghton, Mifflin & Co., 1906). As illustrating the attitude of graduate students of English at Yale toward original composition, I may state that, of ten persons who have received the prize annually offered to the whole university for unpublished verse, five have been graduate students at the time of the award. Considering the disparity of numbers between the graduate students and the whole body of other students, this fact does not seem to bear out the contention of those who assert that the graduate study of English destroys the taste for literature. Of the five graduate students referred to, two—William S. Johnson and George B. Tennant—have each published an edition of a play by Ben Jonson, and another of the prize winners, still an undergraduate when he gained the prize, has produced a doctoral thesis on a subject in English dramatic literature.

ALBERT S. COOK.

Yale University, May 30.

DRESDEN AND CANNÆ.

TO THE EDITOR OF THE NATION:

SIR: Permit me a word about your critique (April 30) of my Vols. III. and IV. of "Napoleon." My statement about Cannæ is accurate. Cannæ was not "won under precisely such conditions" as Dresden. Scarcely two battles in history differ more. At Cannæ Hannibal had a naked river at his back, and neither city nor defences behind him. At Dresden, Napoleon had a big city, with fresh but good defences, behind which he fought and from which he sallied, and the river was spanned by a permanent bridge, which could and did permit troops in vast bodies to pass in rapidity and safety. Again "superior mobility had" not "passed from the French armies to those of her enemies." Of the allies only Blucher was rapid; all the others were slow; and when Napoleon was afoot he was the most rapid of all. Count the miles and hours. If the alleged "superior mobility" of the allies was the "technical point that dominated the whole campaign," then scores of volumes of French General Staff work must be rewritten. Has the reviewer forgotten the Trachenberg plan, under which each minor allied army retreated from Napoleon personally, but attacked any of his lieutenants? Do not this plan, and the fact that Napoleon was confining himself to the defensive, and would not give up Dresden, come nearer "dominating the whole campaign?" If, indeed, by the allied superior mobility the reviewer means that Napoleon would not move when he ought to and could, we are nearer of a mind. That is my text. But he does not say so. Otherwise, I thank the reviewer for his kindly criticism. THEODORE A. DODGE.

Rozières, France, May 17.

[The passage to which Col. Dodge objects is as follows:

> The author, too, lacks the balanced judgment, wide information, and sense of preciseness in language, without which the attempt at framing historical generalities becomes a snare. As an example of this we may pick the dictum that "history narrates but one brilliant victory gained by an army fighting with a river at its back—Cannæ"; yet only a few pages previously may be read an account of Napoleon's victory at Dresden, won under precisely such conditions.

The first exception of Col. Dodge misses our point; we did not criticise his opinion of Cannæ, but his power of historical generalization. He has chosen to compare Hannibal at Cannæ with Napoleon at Leipzig, and, on a comparison of the two, states "that history narrates but one brilliant victory gained by an army fighting with a river at its back—Cannæ." This is a false generalization; and even limited as Col. Dodge now limits it, by adding clauses as to defences and bridges, is open to doubt. If there is no proper comparison between Dresden and Cannæ, as Col. Dodge maintains, then he was not justified in comparing Leipzig and Cannæ; his generalization was futile. That was the point of our criticism. Moreover, we chose Dresden as the nearest parallel to Leipzig, because Dresden also had defences and bridges. Dresden was as near Leipzig for position as possible, and was actually the very last great battle preceding Leipzig. Our expression "precisely similar conditions" referred obviously enough to the conditions as stated by Col. Dodge in words which we quoted verbatim.

As to the question of mobility it is hardly possible to work it out in details that must inevitably be both minute and controversial. But the following broad features of the situation may be pointed out to Col. Dodge: that the French army was greatly inferior in its number of mounted men; that its transport service was also weak; that the inhabitants were acutely hostile, making information hard to get; that the French army was constantly operating and living on a restricted piece of country, thereby again becoming comparatively inferior owing to the strain on the transport service; and lastly that through all the campaign Napoleon's effort was to bring his enemy to battle while almost continuous failure attended it. That the allies retreated on a prearranged plea is true, but that they were able to get away from the French was largely a matter of superior mobility. We are, however, willing to concede this much to Col. Dodge, that whether the inferior mobility of the French was the dominant factor of the campaign or not is a matter of opinion—beyond that we cannot go.—THE REVIEWER.]

THE DEFINITION OF "MOUSSE."

TO THE EDITOR OF THE NATION:

SIR: Referring to the letters in your issues of April 23 and May 7 with regard to the definition of "Mousse"—this word is in use throughout the State of Minnesota, and I believe in other States where there is any number of French Canadians. There it is applied to a variety of ice-cream frozen by placing the pail containing the cream in a bank of snow and allowing it to crystallize, as opposed to a beaten ice-cream made in an ordinary freezer. J. S. B.

New York, June 5.

Notes.

Within the next three or four weeks the Macmillan Co. will publish a new volume by Lord Morley of Blackburn (John Morley), including his papers on Machiavelli and Guicciardini. From the same house is to come "The Making of Ireland, and Its Undoing," by Mrs. J. R. Green, which deals with the little explored period from 1200 to 1600.

Among books in preparation at the Oxford University Press are editions of "Campion's Poetical Works," by Percival Vivian; "Donne's Poetical Works," by H. J. C. Grierson; "Herrick's Poetical Works," by G. S. Gordon; "The Works of Ben Jonson," by C. H. Herford and P. Simpson; and "The Works of Marlowe," by Walter Raleigh and C. F. Tucker Brooke. These are not all new announcements, but they gain in significance by association.

This month Charles Scribner's Sons will begin the publication of Prof. Charles Foster Kent's "Historical Bible." The whole work will be completed in six volumes, the first volume, now to appear, taking up "The Heroes and Crises of Early Hebrew History." Among their fiction for this month will be "The Halfway House," by Maurice Hewlett, a story of modern life in England.

In honor of the one hundredth anniversary of the birth of Jefferson Davis, which occurred June 8, the Mississippi Department of Archives and History has planned to bring out a complete publication of his writings and speeches. To this end it asks the coöperation of all persons who have in their possession any writing of any sort from his pen or signed by him. Communications should be addressed to the director of the department, Dunbar Rowland, at Jackson, Miss.

The *Brown Alumni Monthly* will publish

in an edition of about one thousand copies "Memories of Brown," edited by Robert P. Brown, Henry R. Palmer, Clarence S. Brigham, and Harry L. Koopman. The volume will contain reminiscences by about one hundred alumni.

The Council of the British Academy has decided to organize a celebration of the three hundredth anniversary of the birth of Milton, on December 9.

Rudyard Kipling is to be made a Cambridge Doctor of Letters this term. With him, Sir George Trevelyan and Sir J. H. Ramsay will receive the same degree.

The old fashioned "moral philosophy" is at a discount in the colleges at present, and exercises in the pyschological laboratory do not fit the critic to pass judgment on such dicta as "We must climb if we would pluck the Edelweiss of the soul," or "When we cannot have what we like we can always like what we have" (the toothache, for instance?), or "Life will not flower for him who overplants the soil." When we pick up a book like "The Essential Life," by Stephen Berrien Stanton (Charles Scribner's Sons), all abloom with such flowers, the natural impulse is to classify it with those pink-ribboned high-school essays which assure us that "Beyond the Alps lies Italy," "No cloud but has a silver lining." But then comes the haunting fear that some genuine philosophical fruit lurks undiscovered among these very verdant leaves and sweet scented posies. We might scourge Mr. Stanton for his utter lack of logical coherence, but he has certainly not attempted logical connection: "Discursiveness is the strictest logic. Correlative words and particles can never express the untrammelled sequences of the mind." Thus it is that a large part of each of the twenty-one chapters, with their sharply differentiated *titles*, would suit equally well in any other chapter; but if you start to criticise you are met with the dictum, "Responsiveness makes all things relevant." Of course it may be said that Emerson himself was disjointed, flinging his thoughts at you like handfuls of pebbles and not in connected sequence; that not all of those pebbles have proved to be of solid quartz, and that to the great majority his work has never had any coherent meaning because of the lack of that responsiveness which makes all things relevant. But the real Emerson, who exercised so enormous an influence over those whom he did reach, lay not in these superficial peculiarities of expression. This is not a suggestion that Mr. Stanton has consciously tried to be a second Emerson, but the Emersonian influence is too marked to be disregarded. Those who enjoy moral and spiritual food put up in epigrammatic form, and the class is a large one, will doubtless find much in him to "comfort, cheer, and bless"; but we cannot resist the impression that Mr. Stanton has frequently stumbled into the pitfall which that style keeps ever spread, even for the most competent of its votaries—the mistaking of a striking collocation of mere words for a great thought.

"The Sounds of English" (Henry Frowde) by Henry Sweet, is perhaps the best introduction to phonetics in our language. It is, on the whole, more elementary than the same author's "Primer of Phonetics," but contains some material not embraced in that work. The interest of the book, however, is by no means limited to beginners. The chapters on Phonetics and Elocution, on the Study of General Phonetics, and the Teaching of Phonetics, coming from one of the chief masters of the science, will prove of unusual interest to all students of language. The same thing is true of the chapter on Bibliography, in which the author passes in critical review the systems of the principal phoneticians of our time—Jespersen, Sievers, Vietor, and the rest. The book contains a good supply of texts, with phonetic transcriptions on the pages opposite. It is in this, as in every respect, well adapted to self-instruction; but we recommend it to students of language in general—especially to the post-graduate students in our universities who are beginning their philological studies. The system of phonetic notation adopted is the "Narrow Romic," which practically offers no difficulty even to the beginner.

Henry Barrett Hinckley's "Notes on Chaucer" (The Nonotuck Press, Northampton, Mass.) consists of a commentary on the Prologue to the "Canterbury Tales," and six of the tales, viz.: The Knight's, the Nun's Priest's, the Pardoner's, the Clerk's, the Squire's, and the Franklin's. In fulness and learning the only previous Chaucer commentary comparable with it is that which accompanies Prof. W. W. Skeat's standard edition of the poet's works. Mr. Hinckley's "Notes" will not mark an epoch in Chaucerian study like the commentaries which Professor Skeat published from time to time before finally gathering them up in his collective edition, but it is a solid and useful work. As regards fulness of annotation, Mr. Hinckley gives less space to the Prologue than Skeat, but more to the tales. To be sure, this greater fulness is due partly to the fact that the notes are more often the result of compilation than is the case with Skeat's, including sometimes illustrations that are rather remote from the text. The general views which the author expresses with regard to the tales are in some respects open to criticism. The theory of Flemish originals for the Nun's Priest's Tale and the Pardoner's is not likely to find adherents. It seems singular that the diffuse eloquence of the Knight's Tale—beautiful though it be—should strike any one as "charged with fierce and turbulent emotion." And again—the battle in "Ywain and Gawain" is too uninspired ever to have furnished Chaucer with a model. This is not the place for criticism of the "Notes" on individual lines. The author often annotates passages which Skeat has passed by, and so his work, apart from its own merits, supplements that of his predecessor. A bibliography and index conclude the volume.

The ninth volume of the "Abstracts of Wills" in the surrogate's office in New York city, prepared by William S. Pelletreau, and published by the New York Historical Society, offers much interesting matter on the social condition of the city during the Revolution. The years covered are 1777-1783, and the wills were filed under the royal authorities as well as under the State government. There is little that relates immediately to the war, and only an occasional glimpse is had of actual service in the King's army or navy. At times the witnesses to a will were obliged to leave the city, and their signatures were then recognized on the oath of another person. Some of the testators expressly recognized the distress due to the wars, by which great damage might be done to property, making due provision for such a contingency. One went so far as to provide that his bearers should be "good and faithful friends of the glorious cause of liberty," and only such of his relatives should attend as had been friends to the said cause. Slaves are frequently mentioned, and in some few instances freedom is given. One notable instance was Thomas Townsend, Quaker, who had five negroes. He stated:

> Whereas, I am now in possession of some negroes, and taking the matter under solid consideration, being our fellow creatures, do feel a freedom in my mind to set them fully at liberty, believing it to be consistent with the will of kind Providence, who hath created all nations with one blood.

Very few books are mentioned. The wills of John André and Peter Jay call for special mention. The notes of Mr. Pelletreau on persons and places are instructive and prove his accurate knowledge of the old streets and properties. The first occurrence of the spelling Brooklyn is noted, and the last appearance of a royal governor. The index is excellent.

The erection, on June 6, 1908, of a bronze tablet to the memory of Baron Joan Derck van der Capellen at Zwolle, in Overijssel, by the Holland Society of New York, lends timeliness to the publication of his letters from 1770 to 1783, in Vol. XXVIII. (pp. 102-341) of the Historical Society of Utrecht. Van der Capellen (1741-1784), descendant of one of the Staten Island patroons of New Netherland, was the unflinching advocate in Holland of the Americans during the ascendancy of "the British party," when the Netherlands and the House of Orange were virtually under the control of Sir Joseph Yorke. When King George III., in an autograph letter to the Stadholder, tried to get the Scotch Brigade, long in the Dutch service, detached for service in America, Van der Capellen strenuously opposed and defeated the plan; and Van der Capellen made every effort to advance the interests of the colonies in revolt, as against British efforts to influence Dutch opinions favorably towards Great Britain. Finally Van der Capellen secured the reception of John Adams and a loan for the Continental Congress.

The German Asiatic Society of Japan sends forth Part I., Vol. XI. (pp. 144) of its Transactions, containing an illustrated article on the ethnology of the Malay-Nigrito tribes in the islands lying between Formosa and Luzon. Prof. A. Hoffman of the Imperial University of Tokio writes of the forestry of Korea, with illustrations, showing the great variety and richness of its timber preserves. While most of the lands and mountains near cities are denuded for fuel, there is yet much uncut forest. F. Theil writes assuringly of the development of the resources of Japan since the end of the war with Russia. He argues that the present financial depression must be but temporary, owing to the sound condition of trade and industry and the endless ingenuity of the Japanese. There is an excellent article on "Ancient Japanese Weapons," showing how early the men of Nippon wrought steel with skill and power.

In his lively book, "Américains et Japonais" (Paris: A. Colin), Louis Aubert discusses conditions since the war with Russia. Then our people cheered the Japanese and hastened to buy the bonds of the Tokio government. When peace came, the American discovered that the cunning Japanese would come to America and cut wages there and would rival the American in Korea and Manchuria. M. Aubert gives up the notion so long feared in Europe that, emerging in victory from the struggle with Russia, three hundred million yellow warriors would be ranged under the banner of Japan to overwhelm the Occident. He has discovered that Chinese oil and Japanese water will not mix; yet he sees grave danger in Japanese expansion if unchecked by the Middle Kingdom. If renovated by modern civilization, the Chinese will compel the Japanese to decamp from both Manchuria and Korea. If, on the contrary, Japan holds her own against China, she will be able to safeguard fully the rights of her emigrant subjects in lands bordering the Pacific, now occupied by the whites.

Grimm's "Kinder- und Hausmärchen" is appearing in a jubilee edition with Dr. R. Reimann as editor and the Turm Verlag, of Leipzig, as publisher. The home of these stories, Hessen, between the Fulda, Werra, and Lahn, is also the home of the illustrator, Otto Ubbelohde, who has studied faithfully the local background of the Grimm fables.

The J. C. Hinrichs'sche Buchhandlung, Leipzig, has just issued as *Heft* 3 and 4 of the sixth series of Der alte Orient, "Der Zagros und seine Völker: eine archæologisch-ethnologische Skizze," by Dr. Georg Hüsing. There are three charts and thirty-five illustrations. No. 5 of the Sendschreiben of the Deutsche Orientgesellschaft is a work by Prof. Eduard Meyer, director of the Archæological Institute in Berlin, entitled "Aegypten zur Zeit der Pyramidenbauer," with sixteen text illustrations and seventeen tables. Quite recently there appeared in the same series a contribution by Prof. Otto Puchstein of the Berlin Archæological Institute, "Die ionische Säule als klassisches Bauglied orientalischer Herkunft," with fifty illustrations.

Prof. Hugo Winckler of Berlin has published as No. 15 of the series known as Wissenschaft und Bildung: Einzeldarstellungen aus allen Gebieten des Wissens, edited by Dr. Paul Herre, a summary of his well-known views on Babylonism, in semi-popular style. It is a book of 152 pages: "Die babylonische Geisteskultur in ihren Beziehungen zur Kulturentwicklung der Menschheit" (Leipzig: Quelle & Meyer.)

With the publication of the fourth volume, Dr. C. S. Mommert, of Sweinitz, has completed his almost monumental work, "Topographie des alten Jerusalem" (Leipzig: E. Haberland). This last volume has the supplementary title: "Der Mauerbau des Nehemia, die Akra der Syrer, die Burg Antonia, der Königspalast Herodes des Grossen, die Agrippamauer und Jerusalems alte Gräber." In the four volumes practically all the perplexing problems of the topography of Jerusalem are discussed, not only on the basis of the literature on the subject, but also of the author's personal investigations. His style is unusually heavy even for a German scholar.

Prof. C. H. Becker, of Heidelberg, has published (Tübingen: J. C. B. Mohr), a little work entitled "Christentum und Islam," in which he traces the influence which Christianity has exerted on Islamism. In some points the author defends Mohammedanism against current criticism, insisting, for example, that Mohammedans are not naturally intolerant.

"Paulus in Korinth," with the sub-title "Neue Wege zum Verständnis des Urchristentums," is an attempt by Karl Munzinger, himself for years a practical worker in the foreign missionary field, to interpret Paul's activity from the point of view of modern mission work. (Heidelberg: Evangelischer Verlag.)

The third volume of the *Anthropos: internationale Zeitschrift für Völker- und Sprachkunde*, edited by Father W. Schmidt (Vienna: Mechitaristen - Buchdruckerei), has just appeared. The work is richly illustrated and contains much material on ethnology and linguistics, furnished almost exclusively by Roman Catholic missionaries. The articles are in all the leading languages of Europe. Though managed by Catholics, *Anthropos* numbers several Protestant contributors. It appears in six parts, costing 15 marks a year.

Vandenhoeck & Ruprecht, Göttingen, have begun the publication of a new monthly, *Monatsblätter für den evangelischen Religionsunterricht*, edited by Oberlehrer Heinrich Spanuth.

With October of the present year the first Egyptian university modelled after those of Europe is to be opened in Cairo. Wealthy natives have furnished the necessary lands, and a fund of more than $50,000 is already on hand. For the present, lecture courses will be delivered on French, English, and Arabic literatures, and on Arabian and general history. Teachers from France, England, Switzerland, and Germany are to constitute the teaching force; but Egyptian students are already enrolled in Paris, Oxford, Cambridge, and Leeds, in preparation for work in the new university.

A number of important international congresses will be held in Europe this summer. In addition to those already announced in these columns we may mention the sixteenth International Americanist Congress September 9-14, in Vienna. The special topics to be discussed are (1) the native tribes of America; their origin, geographical distribution, history, language, state of civilization, etc.; (2) the antiquities of America; (3) the history of the discovery and the settlement of America. The International Press Congress meets in Berlin September 20-24. From September 23 to 26 the first International Congress for Moral Pedagogics is held in London. The president for Germany is Prof. Fr. Paulsen of Berlin; for England, Sir Edward H. Busk and Prof. M. E. Sadler; for the United States, Prof. Felix Adler.

The death is announced from Frankfort of Eduard Sack in his seventy-seventh year. In 1871 he joined the staff of the *Frankfurter Zeitung* and was several times imprisoned for his hostility to Bismarck. Among his published works are "Gegen die Prügelpädagogen," "Beiträge zu der Schule im Dienste für die Freiheit," and "Schlaglichter zur Volksbildung."

Henri Avenel, for a long while director of the "Annuaire de la presse," has died, at the age of fifty-six. His great work is the "Histoire de la presse française depuis 1789 jusqu'à nos jours," published in 1900. This substantial volume was followed the next year by "La Presse française au vingtième siècle."

THE OFFICIAL BIOGRAPHY OF SPENCER.

Life and Letters of Herbert Spencer. By David Duncan. 2 vols. New York: D. Appleton & Co. $5.

Spencer, who was incapable of an affectation, made no pretence of putting a low estimate upon the curiosity of posterity concerning himself. After completing the thousand or more pages of his "Autobiography," he left to one of his literary executors a request that there be prepared "a biography in one volume of moderate size, in which shall be incorporated . . . such selected correspondence and such unpublished papers as may seem of value, . . . the frontispiece portrait and the profile portraits, . . . and a brief account of the part of my life which has passed since the date at which the 'Autobiography' concludes." Mr. Duncan has so far bettered his instruction as to produce two volumes of large size, in which the period covered by the "Autobiography" is set forth at as great length as the subsequent period. Official biographers seem to be inevitably stricken with a fatal incapacity for compression. Mr. Duncan's book contains a good deal of new matter that was well worth printing—especially some of the letters from and to Spencer, and the concise history of the development of the philosopher's opinions written by himself—which a sort of abridged autobiography—which is given as an appendix. But all that is both new and important could with advantage have been brought within the compass of a single volume. As it is, much of the first volume is merely a weakened paraphrase of the "Autobiography," either in Mr. Duncan's words or in those of the letters and diaries which Spencer himself used in preparing that curious piece of self-revelation. But, granting its plan, Mr. Duncan's book is carefully done; and it has for purposes of reference one great merit that the "Autobiography" lacked: the index is excellently full and analytical. There is also furnished what is, presumably, a definitive bibliography of Spencer's writings.

In his concluding chapter, Mr. Duncan speculates concerning the verdict of the future upon Spencer's place in the history of thought. The question is one which the future may safely be permitted to settle for itself. But the present generation has at least enough biographic and other material available to make tolerably clear the personal traits and the peculiarities of mental habit which determined the character and the limitations of the achievement of the philosopher of evolution. Most philosophers, doubtless, are vexed by problems before they come upon their solutions of those problems; but there are some who appear to see their solutions before they see the problems. Of the latter sort Spencer was an extreme example. His mind had a prodigious facility and sweep in sketching out, upon the hint of a few facts, or of an obscure analogy or two, "principles" by which huge masses of phenomena could be plausibly exhibited as aspects of one and the same law; the philosophic instinct for unification operated more promptly and more steadily in him, perhaps, than in any other Englishman of his century. But he was constitutionally incapable of regarding anything as a problem, and dealing with it as such—patiently, cautiously, analytically, with a constant eye for hidden obscurities, a persistent effort to see the thing from more than one side. George Eliot once remarked that that great domed forehead of his had never a wrinkle. "I suppose," said Spencer, "it is because I am never puzzled"; and he goes on to explain, with a grave naïveté that is delectably characteristic:

> My mode of thinking did not involve that concentrated effort that is commonly accompanied by wrinkling of the brows. It has never been my way to set before myself a problem and puzzle out an answer. The conclusions at which I have from time to time arrived have not been arrived at as solutions of questions raised, but have been arrived at unawares.

As a result, partly, of the peculiar impatience that was a feature of his nervous disorder, Spencer had to think easily, fluently, unobstructedly, without involution, or he could not think at all. He was accordingly incapable of being interested by, or of seriously attending to, any facts which he could not readily put into some seemingly appropriate place in a general scheme; and he was rarely able to read any book with which he disagreed. No modern writer has ever attained a comparable distinction in philosophy upon the basis of so abysmal an ignorance of other men's ideas and of the previous course of human reflection; and this ignorance in Spencer was purely the consequence of irritability and of incapacity for intellectual sympathy. He writes to Leslie Stephen in 1899:

> When twenty-four I met with a translation of Kant and read the first few pages. Forthwith, rejecting his doctrine of Time and Space, I read no further. My ignorance of ancient philosophical writers was absolute. . . . Since those days I have done nothing worth mentioning to fill up the implied deficiencies. Twice or thrice I have taken up Plato's Dialogues, and have quickly put them down with more or less irritation. And of Aristotle I know even less than of Plato. . . . The same holds of all other books of philosophical kinds.

So, also, in the case of lighter literature; if any passage aroused a moment's aversion, the book and its author were forthwith placed upon the philosopher's private Index Expurgatorius, which fairly rivalled the ecclesiastical one in both the number and the importance of the titles contained in it. Thus Spencer, out of sympathy for the worthy Modestine, long refused to read anything of her master's:

> I began to read Stevenson's "Travels with a Donkey in the Cevennes," but was so disgusted with his treatment of the donkey that I gave it up quickly, and never looked into another of his books for many years.

A thinker at once so fluent and so petulant was obviously open in a peculiar degree to the "fallacy of the neglected aspect," to one-sided inductions, over-facile transitions, hasty generalizations, to conclusions that were too wide because based upon an examination of nature and of human life that was too narrow. There is a good deal in Spencer that illustrates what Bacon meant by the *intellectus sibi permissus*. Yet, under these circumstances, it is the more indicative of a native penetration amounting to genius, and of an early acquired and deeply ingrained affinity for the spirit and methods of natural science, that Spencer's general cosmological scheme has appealed so strongly to many scientific men, and that he has contributed to more than one special science at least some fruitful half-truths and some important methodological principles. And it was his very freedom from historical baggage and from the checks and safeguards which limit the speculative pace of most typical latter-day thinkers, that enabled him to make that intrepid "dash for the pole" of a completely unified knowledge, which was assuredly magnificent, even if it was not philosophy. Though he had for his base of supplies a larger and more correct body of empirical knowledge, he was, in the middle of the nineteenth century, almost as footloose intellectually as a Greek physiologer.

There is an interesting contrast between Spencer's place and influence in his generation and those of his contemporary, Henry Sidgwick. Both take high rank among the saints of philosophy, are shining exemplars of the piety of the intellect; both belong to the same general line of development in English thought; both are comparatively clear and untechnical writers. Sidgwick's was by far the subtler and sounder intelligence and the richer nature. But to him philosophy presented itself at the outset as a group of problems, of contradictions to be overcome and antitheses to be reconciled; and a group of slightly clarified problems it remained at the end. He was as incapable, through the very thoroughness of his critical scrupulosity, of getting anything settled completely and without qualification, as Spencer was of leaving anything unsettled. As a result, though Sidgwick is read with delight and instruction by not a few students of philosophy, he had almost no influence upon the general movement of thought of his time; while Spencer gathered to himself a multitude of ardent disciples and became a conspicuous historic figure. He owes this position to that unchastened boldness of constructive imagination which led him to put together the flying fragments of current scientific generalization into a veritable epic of the universe—an epic appealing all the more to the contemporary taste because, though its main story was earthly enough, it opened with a species of Prologue in Heaven; and because, also, when any of the brave formulas that are the heroes of the plot seemed from time to time to be getting the worst of the logic, a gray-eyed Unknowable might always be expected to descend, full-panoplied in self-contradiction, to mantle the hard-pressed hero in a cloud of unintelligibility, and thus prevent the narrative from ever coming to any untimely or unhappy ending.

If Spencer had, like many even of the more constructive philosophers, been content with a few synthetizing principles of a high degree of generality, his work would have never had the vogue and the following that it attained. It not only professed to unify all things, but also to trace that unity out in detail; its ultimate formulas, once discovered, became fruitful and multiplied and replenished the special sciences with subsidiary formulas of descending degrees of generality. Thus the faithful Spencerian is able to find in the Synthetic Philosophy, as the good Catholic is in the "Summa," a reasoned answer to every doctrinal question. Spencer's mind, though not genuinely analytic or dialectical, was as markedly a ramifying as it was a unifying mind; and it was this combination which gave to his system, for many, its special interest and impressiveness.

He himself was wont to insist upon the essentially deductive character of his reasoning from higher to lower principles; and the same deductive procedure has, by some of his critics, been charged against him as a reproach. But the truth is, certainly, that he was not deductive enough. The philosopher who, taking up almost any pregnant principle, will follow out undeviatingly its necessary implications, is likely to reason very instructively, even though his principle be inadequate or false. But Spencer was of much too impatient a nature, and too full of unsubdued temperamental tendencies and whole-hearted prejudices, to let the inner logic of his own primary doctrines work itself out with rigorous objectivity. His method did not consist in the deduction of special from general principles, but in the interpolation of special principles at points suggested by the general scheme. The fruit to be found upon the many branches and twigs of his single tree of knowledge is often, perhaps usually, not the natural product of the plant. It has been brought from elsewhere and stuck on; though with so extraordinary a skill as to deceive even the author of the arrangement.

This is especially well illustrateed in the ethical part of Spencer's system. Partly because he was not untouched by the old Benthamite—or perhaps the Paleyite—tradition, partly because of temperamental qualities, Spencer early became and always remained in the main a utilitarian or benevolent hedonist. The doctrine that "the ultimate moral aim is a desirable state of feeling called by whatever name—gratification, enjoyment, happiness"—is set forth in the "Data of Ethics" as a corollary of the evolutional doctrine; and it is defended, in part, by biological arguments, such as the contention that "sentient existence can evolve only on the condition that pleasure-giving acts are life-sustaining acts," favorable to the survival of the individual or of the species. Yet the main and the ostensibly decisive argument offered for hedonism is entirely of the pre-evolutionistic sort: that pleasure is the only thing in itself good, is a "necessary moral intuition." Not only is Spencer's utilitarianism in the last analysis independent of his evolutionism; it is deeply incongruous with evolutionism in general, and with his form of it in particular. In so far as he is the moralist seeking guidance from the laws and the tendency of evolution, Spencer's true criterion of goodness in conduct is the capacity of acts or impulses to further the evolutionary process and to make for "the increase of life both in length and breadth." Now happiness, for any individual or generation, obviously depends upon the maintenance of an established equilibrium, upon the placid harmony of "inner relations with outer relations." But for Spencer progress in evolution properly depends (until the distant goal of final adjustment is reached) upon a constant breaking-up of every established but premature equilibrium, upon the broadening of life, its enrichment in "heterogeneity, definiteness, and coherency," at the cost of whatever growing-pains. Spencer ought, according to the profounder implications of his fundamental principles, to have warned the men of these transitional generations to shun happiness above all things. The romantically austere moral temper really appropriate to the Spencerian type of evolutionism was far better expressed by Zarathustra than by the author of the "Data of Ethics": "Man is a rope connecting animal and beyond-man—a rope over a precipice. I love those who know not how to live except in perishing; for they are those going beyond. I love those who do not look beyond the stars for a reason to perish and be sacrificed, but who sacrifice themselves to earth, in order that earth may some day become beyond-man's."

CURRENT FICTION.

The Primadonna. By F. Marion Crawford. New York: The Macmillan Co.

Mr. Crawford's hand becomes not less deft but more nonchalant as the years go by. He has the air of good-humoredly playing up to his audience, of applying a casual sop to the not over-discriminating palate of his constituency. "The Primadonna" is a sequel to "Fair Margaret," that lady being, it will be recalled, an English girl who rises from humble beginnings as daughter of a provincial clergyman to be the greatest "lyric soprano" of her day. Our scene opens at a moment of culminating triumph in New York, when her presence of mind prevents a disastrous panic in the opera house and the plaudits she receives are no longer merely tributes to her voice. Almost at once the action shifts to England by way of an ocean passage, the events of which, described at some length, turn out in the end to have been of very little importance. Indeed, it must either be supposed that the story-teller had a rather vague notion what his story was to be, or that it was his ironical pleasure to prepare us in a general way for various happenings which do not come off. We incline to the former supposition, and are aware that it would be folly to expect so notorious an improviser as Mr. Crawford to revise his premises in the light of his conclusion. But the thing is a little irritating as it stands.

Given our Primadonna, the question is obviously, Who is to be the lucky man? There seem to be two possibilities of long standing: Lushington, the English novelist, a man of fastidious tastes, who loves her as the quiet Margaret Deane; and Logotheti, the Greek financier, who adores her as the brilliant Madame da Cordova. On one occasion the latter has tried to kidnap her, a fact which she appears to regard with the same complaisance with which she regards her rescue by the English candidate for her hand. Thirdly, there is an American, one Van Torp, like Logotheti a great figure in finance, but unlike him a person of repellent manner and sinister repute. There is a moment when we have cause to fear that our old friend Paul Griggs, who has surely suffered enough by this time, is doomed to make a fourth in the love-chase. Happily he is eventually seen to have been introduced only in order to perform one or two of his well-known feats of strength, and it is certainly a pleasure to know that he still retains the quality which endeared him to us in his early prime. As a matter of fact, it is in Van Torp that the interest of the tale chiefly centres. An object of horror and loathing at the outset, he gradually assumes the rôle of hero, as it transpires that instead of being a profligate and a murderer, he is really a person of exceptional magnanimity and loving-kindness. In the end it is understood that Margaret is to marry her picturesque Greek; but one suspects that Mr. Crawford may have later occasion, according to his method, to bring her and Van Torp together in some manner. It does not greatly matter. Margaret is not a person with whom we should greatly grieve to have done.

The story is told in the mildly jocular tone which apparently grows upon this popular writer. For example:

> The chaperon is going down to the shadowy kingdom of the extinct, and is already reckoned with dodo, stage-coaches, muzzle-loaders, crinolines, Southey's poems, the Thirty-nine Articles, Benjamin Franklin's reputation, the British workman, and the late Herbert Spencer's philosophy.

On the whole it appears that although the dignified ease of Italian retirement does not stay the torrent of Mr. Crawford's productivity, it is in danger of endowing him with a rather too easy complaisance.

The Captain's Wife. By John Lloyd. New York: Mitchell Kennerley.

New combinations of raw material are the order of the day in fiction. A moment ago it was the Zenda and the London murder; now it is the Arizona military station tempered with the loss of memory after a great shock. The two blend very well under Mr. Lloyd's able treatment. His Arizona is made immensely vivid without superfluity of description. Its blistering heat, its wondrous skies, its huge stars are continually felt, but never grow wearisome. The Apache, shorn of picturesqueness, is shown as the United States army has found him. The memory-lapse, though the crux of the story, is not so monopolizing as not to leave room for a variety of portraits, military and civilian, and of incidents ranging from comic to tragic. The writer's touch is light and keen, and his little novel, arranged in good paper and print, runs along at full speed.

The Duchess of Dreams. By Edith Macvane. Philadelphia: J. B. Lippincott Co.

Ingenuity on one side and impossibility on the other are the wings that speed this story on its fleet course. Its naïve preposterousness does but lend it charm. The reader feels gratified at being asked to accept such engaging extravaganza, as if a child should offer to share with one a particularly thick piece of bread buttered on both sides. It was nevertheless no child's play to collect such material and combine it into a whole that to the eye at least should be reasonably cohesive. A social climber, a Russian princess, an amateur actress, an American diplomat, a Hungarian blackmailer, a Yankee anarchist, with Newport society as corps de ballet, join hands in the fantastic dance, advancing and retreating into a fine tangle of madness and method. All that one asks in such a coil is pleasing style and sustained interest and here are both to the reader's hand.

The Five Knots. By Fred M. White. Boston: Little, Brown & Co.

"The Five Knots" is to be commended to parents in search of a book that will interest young children late in the evening. One is in doubt whether to call this an example of very late Gothic or the most faithful and unblushing specimen of the dime novel between cloth covers. The chapters rejoice under such headings as "The Blue Terror," "The Yellow Hand," "No Foe of Hers," "The Vaults Beneath," "Vanished!" and "Aladdin's Cave." There are several names, but no characters. The padding is barefaced—or is it epic repetition? Here is the soul of the plot: Mr. Flower, a very evil man of wealth, made the bulk of his fortune by a gigantic crime in Borneo. Two devoted survivors of the town which he wiped out come to England to take his life. Three several times, as Fenimore Cooper would have said, do these little yellow men attempt to end Mr. Flower's career. But Mr. Flower has a niece. Three several times, at the fatal moment, Dr. Mercer, lover of the niece, intervenes. Of the three great incidents of the story, the second is an almost perfect duplication of the first, except that one takes place in Mr. Flower's country house, the other in his city mansion. A half-dozen hares are started and left running unpursued. One reads on in the vain hope that the author will knit his threads together and justify his ways to men. A more absurd story is seldom written.

Captain Love. By Theodore Roberts. Boston: L. C. Page & Co.

The contents of this book are epitomized by the cover design—two horsemen galloping madly through a landscape of blue and green. The tale is of highway robbery, love, and gallantry in the reign of George I. The illustrations are perfectly suited to the text or to any dozen romances you may name. Blunderbusses roar in the good old way, and the killings are performed with excellent gusto. Racy phrases like "rip me" and "stap my innards" heighten the brisk poetic style and contribute to the "color" of the period. Of approximately a hundred strong oaths and expletives, one for every three pages, two come at ends of chapters, where they produce a surprising impression of truth and virility—"By God, I have forgotten her face," and "'By God,' whispered the innkeeper." In one or two places only, the author, perhaps recalling the act of 1606, against the abuse of God's name in stage plays, etc., supplies dashes.

Although, in the main incidents, the story conforms heartily to its type, there is a certain novelty and attractiveness in the hero, something of the finer spirit of romance. Hurt in an encounter with highwaymen, he loses his memory, his name, his friends, and his clothing; but, being a dauntless blade, he himself holds up a gentleman of the road, in whose garments he reclothes himself, goes up to London, and by his fortune at cards, maintains himself in polite society under the assumed name of Captain Love. The captain is a thoroughly expurgated d'Artagnan with a touch of Monsieur Beaucaire and a strong dash of Quixote. His valor and lavishness, his grace and poetic charm trouble the hearts of ladies; but a face rising faintly from his extinguished life haunts him and safeguards him among all momentary passions. In the end, he blunders into his past, and, without having searched for it, recovers his own. If you choose, then, you may recognize the symbolic value of the captain's name, and, under the conventional mask, the quest of love for its ideal.

The Cheerful Smugglers. By Ellis Parker Butler. New York: The Century Co.

In this book Mr. Butler has done what he did so well in "Pigs Is Pigs" and "Confessions of a Daddy," and not so well in "Kilo." That is, he has hit upon a fanciful idea in the domain of the commonplace, and has developed it with an extravagant humor that is neither low, like the work of one class of broad comedians, nor funereally serious like that of another familiar class. Mr. Butler seems to enjoy the knowledge that he is amusing, and now and then can't help asking the reader if he doesn't think so. The little book is very good fun.

Colonial Administration in the Far East. Vols. I. and II. The Province of Burma: A Report Prepared on Behalf of the University of Chicago. By Alleyne Ireland. Boston: Houghton, Mifflin & Co. $12.50 net each.

With the present exhaustive study of a typical province of British India, Mr. Ireland begins a series of volumes—the maximum number is fixed at twelve—in which he is to embody the results of ten years of investigation into the methods of European rule in Southeastern Asia. Before the work is completed, he will have consulted six thousand volumes, covering more than a million printed pages, and the student of colonial problems will have been supplied with what is not so much a report as, in fact, a cyclopædia and gazetteer for the Philippines, French Indo-China, Java, Burma, Hongkong, British North Borneo, Sarawak, the Straits Settlements, and the Federated Malay States. When Mr. Ireland began his undertaking, we had in the Philippines a problem that was both novel and difficult, and also of great national interest. Novel the Philippine problem no longer is; interest in it has waned among the people at large, but difficult the situation still remains; and whatever Mr. Ireland's studies can contribute to the wisdom and efficiency of American rule in the Philippines should be welcomed.

Mr. Ireland's account of Burma in the 1,023 large and closely printed pages that make up the two volumes is severely impersonal; with one exception, there is no attempt at interpretation and estimate. The material is partly a condensation of, and partly quotations from, an enormous number of official sources, many difficult of access, which are now placed at the disposal of the average reader. Though nominally a treatment of Burma, the books cover, to all intents and purposes, the greater part of the administration of British India as a whole. Burma was chosen as the classical province of the bureaucrat, using that term in no invidious sense. There, "the administration is of a highly organized type; the records are as complete as those of any government in the world; every incident of the administration is embodied in some report."

Under a scheme which postpones original comment for two final volumes of critical analysis and comparison, there is little room left for the reviewer to comment in turn. "No attempt has been made," says the author, "to make the report attractive to the general reader; no effort has been expended in giving the work an appearance of originality, which, while it might perhaps add something to the literary reputation of the reporter, would detract from the utility of the work." And indubitably the average reader would find it pretty hard sailing through the long stretches of quoted official reports and statistics. But the reader a little above the average will discover much to attract him in the skilful collation of document and statistical abstract, which, even in the absence of interpretative comment, tell more or less of a story by themselves.

There is some question as to the proportional treatment of the material. An opening chapter of twenty pages devoted to a general description of Burma gives over one-half of its space to an elaborate account of the Burmese forests, taken from the "British Burma Gazetteer" of 1880. Now it may be argued that however necessary a knowledge of the climate and flora of a country may be for a complete understanding of its government, detailed treatment of this kind is excessive. True, administration in Burma, as elsewhere in the East, is as closely concerned with land and forest as with revenue, police, and, crime, but nevertheless the technical minutiæ might have been spared. The chapter on Public Instruction in Burma opens with an official paper on Indian educational policy, occupying nearly one-half of the chapter; a tenth of the same chapter is given to a reformatory school for juvenile offenders at Insein, near Rangoon, which in 1905 sheltered only seventy-eight boys. The Indian official paper is worth all this space, because it is an admirable exposition of the attitude of India's rulers on the question of education, which, as events of the last two years have shown, virtually affects native loyalty to British rule; but eight pages on the reformatory seems proportionately too much.

The chapter on the Burmese Land Revenue system, because of its competent treatment of land, famine, and taxes, is of equal interest to the student and to the casual reader of the day's news from India. The charge that Great Britain is responsible for the permanent introduction of famine into India is summed up, pro and con, in a parliamentary paper of fifteen pages. Here Mr. Ireland's promise not to comment or criticise finds its solitary exception in a luminous four-page analysis of the relation of per capita taxation to earning power and exports among the people of the East, as compared with conditions among more advanced populations. This short break in the long succession of arid reports and statistics promises much for the two final volumes. Moreover, it may be that an apparently trivial fact rejected by the reviewer may become the cornerstone of an impressive generalization in the last two volumes. For the present, therefore, we have only to record the happy beginning of a monumental and eminently useful work.

There is a bibliography, a map of Burma, and a "political map of the Far Eastern Tropics."

History of the Christian Church. By Philip Schaff. Vol. V., Part I.: The Middle Ages from Gregory VII., 1049, to Boniface VIII., 1294; by David S. Schaff. New York: Charles Scribner's Sons.

The present volume, the fifth in the series planned by the late Dr. Philip Schaff, is a work at once of filial piety and of independent scholarship. At the death of Dr. Philip Schaff in 1893 he had completed Volumes I.-IV., covering the history of the Church to the accession of Pope Gregory VII. in 1073, and Volumes VI. and VII., on the German and the Swiss Reformation, respectively. He had also collected much material for a volume on the whole remaining mediæval period, an interval of nearly five centuries. In taking up this material with a view to completing his father's plan, Dr. David Schaff felt that one volume was quite insufficient for the adequate treatment of a period so long and so full of events needing careful exposition, if the history of the Reformation were to be properly linked with that of the age preceding. He has therefore undertaken to make two parts of volume five, and of these the first is now before us.

It follows in general plan and in method of execution the model set in the work of the elder author. It is the fruit of fifteen years of study in the intervals of an active teacher's life, and mainly with such materials as could be procured in the libraries most nearly accessible to the author. How extended this material was is abundantly shown by the multitude of references which fortify every expression of opinion. It is a subject of congratulation that an American scholar working chiefly in American libraries could find so complete an equipment. The division of this volume is into a narrative and an institutional part. In six chapters the outward history of the Church is followed from the first appearance of Hildebrand as the power behind the papal throne to the accession of Boniface VIII., the culmination of the mediæval system. Then in separate chapters we have the chief aspects of the religious life of the middle ages as a whole—the Crusades, the monastic system, heresy and its suppression, the learning of the day as expressed in the universities and the development of scholasticism, the sacramental scheme, the canon law, and the growth of popular forms of worship. Each of these chapters is supplied with an extended bibliography covering the whole chapter, with special lists of books for the several sections into which the chapter falls. These bibliographies constitute the chief merit of the book for the working scholar. They are carefully made and are brought as nearly to date as can be expected in a work so comprehensive as this. Bibliographies are, of course, in a sense antiquated as soon as they are printed; but they are valuable beyond all proportion to the space they occupy. We note with especial approval the frequent reference to more detailed bibliographical material.

The style of presentation is essentially the same as in the volumes of the elder Schaff. In describing this work as of the "School of Neander," the clue is given to the spirit that pervades it. It is the spirit of evangelical piety freed from narrow sectarianism and lifted above the pettiness of controversy by a sound and catholic scholarship. Nowhere does the author deny his "Scriptural" point of view. He refers beliefs and institutions to that standard as final, and we may or may not agree with this ultimate test of value. Yet one is not made to feel that scholarship has been subordinated to a theological scheme—only utilized to establish scientifically what was fixed by faith beforehand. This is conspicuously true of Dr. Schaff's presentation of the Roman Catholic system as undoubtedly valuable, even necessary, in welding together the half-civilized European peoples into a social compact out of which great things were to come, yet essentially a false solution of the social and religious problem as set by the Christian dispensation.

Little can be said in praise of the literary style. It is arid and unattractive to a degree. The notebook is in evidence at every stage. Too much space is given to personal traits of individuals which do not bear on the course of events. The narrative does not "march" at any point. Conventional phrases weary the reader by their repetition. It is hard to imagine any one really reading this book with enjoyment. Even the dramatic moments are not made to stand out as they might as the natural outcome of a clearly traced development.

An excellent detailed index greatly increases the usefulness of this useful volume.

Ice-Bound Heights of the Mustagh. By Fanny Bullock Workman and William Hunter Workman. New York: Imported by Charles Scribner's Sons. $5 net.

This is the story of exploration by Dr. William Hunter Workman and his wife, Fanny Bullock Workman, along the Chogo-Lungma glacier in Kashmir. They ascended many of the environing slopes of snow, 17,000 to 20,000 and even 23,000 feet in height. In this portion of the Mustaghs, or Karakoram-Himalayas, these two Americans have made five explorations within the past ten years. Not every season has been favorable for mountaineering at high altitudes, yet virgin peaks have always been conquered, and valuable observations obtained in geography and natural history. This book recounts the work of two seasons, 1902 and 1903. It tells how Mrs. Workman in one day twice surpassed her own previous record, 21,000 feet—and finally reached the top of Lungma, at 22,568 feet. She has since climbed to 23,300 feet in the NunKun range, and Dr. Workman has gone a hundred feet or more higher on Pyramid Peak.

In his charming volume of 1894, "Climbing in the Karakoram-Himalayas," Sir Martin Conway gave not only the initial view of the Kashmir peaks and glaciers, but an insight into the methods of mountaineering there. In Switzerland, with a guide and a porter, one rushes for a summit, spending perhaps a night or two in a club-hut; and on the return there is a comfortable hotel with a good bed. This is mere skirmishing, but the Himalayas must be conquered by siege. In Hindustan there are no populous towns for a base, but in villages ignorant of Europeans or their ways the leaders must pick up their forces and their provisions. Camps are established with a regiment of attendants—fifty or sixty coolie assistants, uneducated, steeped in the notions of caste, ready to desert whenever they feel in the mood. From the basal camps, others are pushed up farther and farther, till we find Camp Riffel, for example, at about the height of Mont Blanc, an active centre for exploration. From the lower camps a train of coolies steadily carried supplies and firewood to the upper. In this systematic way siege was laid to the peaks. The very highest camp was of necessity within striking distance of the summit. The story of these camps is an important part of the volume. It is evident that the leaders of such an expedition must have money, power of endurance, and executive skill, to manage this horde of lazy and irresponsible native porters. Little wonder that Mrs. Workman thus rates the difficulties of mountaineering in this district: "the low snow-line, the coolies, and the weather." As a matter of fact, the Workmans have passed the altitude to which the natives can go and have been obliged to bring European guides. The technique of camping at high altitudes is exceedingly well set forth. The discussion of mountain sickness, for example, is authoritative, for the Workmans had many natives and at one time as many as nine Europeans above 19,000 feet. Their observations militate against the idea that one may become accustomed to the rarer air by staying in it for a number of days. Insomnia sets in and consequently exhaustion.

Conway's trip was a rapid, sketchy exploration, in the course of which he remained three months above the snow-line. He made a wide circuit, taking the Hispar and Biafo glaciers for a northern boundary, and enclosing a splendid group of mountains, Chogo, Lungma, Pyramid Peak, and Haramosh. The Workmans surveyed in detail almost everything within this circuit. The ordinary atlas presents the region very imperfectly. The Mustaghs, called by Conway the Karakorams, form the most northerly bit of the boundary of Hindustan, where Kashmir projects almost past Tibet. They are separate from the Himalayas, although of the same general character—a kindred range in the great Asiatic mountain system. In this country man had practically never set foot: the Workmans have explored, measured, mapped, photographed, and sketched it. The volume contains a large amount of interesting matter: running comment on botany and geology, and even the record of animalculæ at a height of 17,000 feet; sketches of people and notes on the nature of the country.

The publishers have done their part in furnishing excellent typography, good reproductions of photographs, and two clear maps. It is to be regretted that the paper is shiny, clay-laden, and heavy to the hand.

Legal and Commercial Transactions, Dated in the Assyrian, Neo-Babylonian and Persian Periods. By Albert T. Clay. Vol. VIII., part i., of the Babylonian Expedition of the University of Pennsylvania, edited by H. V. Hilprecht. Philadelphia: Published by the University. $6.

Of these first eight volumes of the series of Babylonian texts in the University of Pennsylvania, Professor Clay has published no less than four and three-quarters; in one volume, some of the work was done in coöperation with the general editor. In all, Professor Clay has brought out no less than 776 texts—or about two-thirds of all hitherto published. Since he is still a young man, this is a splendid record of scholarly activity—extensive enough in fact for an entire career. The character of Dr. Clay's work is in keeping with the amount. For some time he has been recognized as one of the best of copyists and editors of cuneiform texts; and, in the volume just issued, he maintains his enviable reputation. A number of the texts come from that part of Nippur known as Tablet Hill, the site of the supposed "temple library." Up to the present the tablets found here are of much the same character as those recovered from other mounds: chiefly business documents relating either to the temple administration or to private affairs. But in addition, a considerable number of school texts, syllabic, mathematical, metrological tablets, name lists, and the like, have also been discovered here; and apparently also some distinctly literary texts. Of the latter, however, no specimens have as yet been published. This eighth volume deals with the later period of the Assyrian and Babylonian history, beginning with the seventh century B. C., and going down towards the close of the Persian period.

In the Introduction, Professor Clay takes up a problem that has vexed scholars for many years, the identity of a ruler Kandalânu, whose name has been found on a considerable number of commercial documents. Professor Clay makes out a good case for the view maintained by Professors Oppert and Sayce against the majority of scholars, that Kandalânu is not identical with Ashurbanapal. Professor Clay shows that the evidence upon which this identification rests is elusive. This part of the Introduction is a good illustration of the careful and thorough method of the author. Whether, however, Kandalânu is a brother of Ashurbanapal, as Professor Clay is inclined to believe, is doubtful.

Of the 159 texts included in the volume, Professor Clay furnishes the transliteration and translation of thirty-one—sufficient to illustrate the general character of the documents, and to help in making the student familiar with the *ductus* of the cuneiform characters at this period. The subjects covered are unusually varied—debts, dealings in slaves, house rents, securities, ejectments, tithes, interest, and the like—so that the wide scope of the commercial activity prevailing in

Babylonia is well illustrated. Dr. Clay's translations give evidence of close study, though, naturally, in regard to some of the interpretations given by him there is room for difference of opinion. There are still many terms in this class of texts that are obscure, and it is only proper to add that, if the number of such terms is considerably less than was the case some years ago, it is due in large part to Dr. Clay's work.

A valuable feature of this volume, as of the preceding, is the complete list of proper names occurring in these texts. There are over fifty names of deities, though a number of these represent epithets rather than real names.

Science.

Three Voyages of a Naturalist. By M. J. Nicoll. New York: imported by Charles Scribner's Sons. $2.50 net.

This volume suggests the old adage about the uses of adversity. The Earl of Crawford, being a victim of rheumatism and asthma, found relief, and pleasure besides, in cruising, during the severe seasons of the British year, through tropical waters, on his own yacht, the Valhalla. The medicine was doubtless not hard to take, though it must have been rather costly; for the yacht was a thoroughly rigged vessel, with a crew of sixty-five men. The Earl, being one of the trustees of the British Museum, was moved to put his voyages to some use to science and mankind, by adding a skilled naturalist to his corps of officers, and gleaning the lands and waters visited for material wherewith to enrich the Museum. "May his tribe increase!" This resolve led to the selection of Mr. Nicoll, a young ornithologist, as the naturalist of the party. How well he wrought his part is sufficiently shown by the fact that he is now, by appointment of the Egyptian government, the second in charge of the Zoölogical Gardens at Giza, near Cairo. He sailed three voyages, covering in all 72,000 miles, chiefly in southern seas. One voyage was down the coast of South America, and through the Straits of Magellan to Valparaiso, Chili; thence 8,000 miles across the Pacific, and so through the Suez Canal and the Mediterranean zone—making a trip around the world. A second voyage took in the West Indies and the Gulf of Mexico; and a third circumnavigated Africa. During all these trips natural history collections were made, and the results to science were highly valuable, though hardly comparable therein with the famous voyages of the Beagle and the Challenger.

Mr. Nicoll's attention was chiefly devoted to birds, of which several hundreds of skins were gathered for the British Museum, a dozen or more species being new to science. Besides these, mammals, fishes, reptiles, and insects were secured, and in the subsequent descriptions the specific name *Crawfordi*, in honor of the patron, has been attached to bird, beast, and creeping thing as a memorial of his part in the expeditions. The author gives many interesting glimpses of the habits of birds, some new, others confirmatory of previous observations. At Valparaiso, the giant pelicans, which were seen perched upon the harbor buoys by day, took flight at evening and hovered over the shoals of fishes that filled the waters. Suddenly they closed their wings, plunged into the sea, and emerged with the pouch beneath the bill enormously distended with their catch. While the game bag was emptied rather leisurely, a black-backed gull (*Larus Dominicanus*) would occasionally settle on the pelican's head, and watch its opportunity to snatch a portion of the supper from its mouth. More curiously still, the larger bird, in the spirit and actual practice (a far rarer affair!) of this rude piscatorial communism, did not seem to resent the gull's treatment (p. 190). On the island of Trinidad a new tern was found, which now bears the name of *Gyris Crawfordi.* The mother bird lays but one egg, either on a narrow ledge of rock, or a branch of a dead tree (p. 45). No nest is built, a slight hollow or depression satisfying the maternal anxiety. The depression is often so small that a slight push will dislodge egg or young. Yet the egg is so nicely balanced that it keeps its pose. The hold of the fledgling is even more remarkable. Several times, as an experiment, Mr. Nicoll drove a brooding hen from her nest, in the act of leaving which she invariably brushed out her chick. Did it fall from its high refuge? Not at all. As it rolled over, it caught the edge or ridge or branch with its sharp claws, and clung tenaciously, until it finally pulled itself back. Thus, it escaped the squads of huge and voracious land crabs beneath that soon would have devoured it. Meanwhile, the investigators were fairly mobbed by the old birds, who, to divert attention from eggs and young, fluttered within a few inches of their faces, and even perched upon their hats, uttering soft, croaking protests. A like indifference to human presence was shown by the ibises on Aldabra Island, one of a group off the east coast of Africa, north of Madagascar. These interesting birds (*Ibis Abbotti*), which are much like the well-known sacred ibis, were not only quite fearless (p. 121), but waded across the pool on which they were standing, and, coming close up to the photographer's camera, began to peck at the tripod. They were driven back to the rocks, but before a plate could be exposed they came back, and were again inspecting the legs of the camera. They allowed themselves to be picked up, and, when released instead of showing signs of fear, ran around their inspectors' feet, plucking at the tags of their bootlaces. If the ancient Egyptian sacred ibises were of the same temper they may have been quite aptly the symbol of a divine fraternity in nature.

One of our author's most remarkable experiences was the view of a veritable "sea serpent" off the coast of Brazil. It was long enough in sight to permit an imperfect description and a rough sketch. Mr Nicoll was leaning on the rail of the poop deck when a large fin about four feet long and two feet out of water appeared some fifty yards off. Below the surface was a very large brownish-black patch, whose shape could not be made out. Suddenly there was thrust out in front of the fin an eel-like neck about six feet long and as thick as a man's thigh, bearing a turtle-shaped head. The head and neck were black-brown above, like the fin, but silvery white below. The creature lashed up the water as it moved with a curious wriggling motion. Mr. Nicoll considers this animal as a real type of the "great sea serpent" of tradition. He believes it, however, to be a mammal and not a reptile. This report of a trained naturalist seems to indicate that somewhere hidden in the deep seas are still extant huge living forms rivalling in size, and perhaps the descendants of, the monsters of the geologic ages.

The publisher's work is admirably done, and there are many full-page phototype plates.

"Air Ships Past and Present," by A. Hildebrandt, translated by W. H. Story, a book containing 364 pages and 222 illustrations, has been published by D. Van Nostrand & Co. Capt. Hildebrandt, who is an instructor in the Prussian Balloon Corps, has made his work popular, and has reduced the theoretical investigations to the smallest possible limits. There are, nevertheless, a few valuable formulæ. The first chapter is a rather meagre history of early efforts; the next two treat of the invention and development of the hot-air balloon—a fairly complete compilation, chiefly from French sources. Chapter iv. is a well-written explanation of the theory of the balloon; chapters v.-viii. are devoted to the dirigible balloon, from that designed by Gen. Meusnier in 1784 to that of Count de la Vaulx at the beginning of 1906, the date at which the book was written. Chapter ix., on flying machines, is not so complete as might be desired, for the author is evidently more familiar with ballooning. The chapter on kites is more thorough. The best chapters are those on military ballooning, particularly chapters xiv. and xv., on "Modern Organization of Military Ballooning"—the author's specialty. In his discussion of "Ballooning as a Sport," Capt. Hildebrandt gives interesting accounts of his numerous adventures. The author is also expert in balloon photography, and offers valuable hints regarding it. We note a few errors. On page 95 the distance travelled by Santos Dumont's aeroplane should be 220 metres, instead of 200 feet. It is also a mistake to say that Maxim's experiments were carried out with the assistance of Langley. Cody, of British kite fame, is not "otherwise known as Buffalo Bill"; the two men are cousins. So much has been accomplished since 1906 that a supplement or a new edition of this book will probably be called for within a year or two.

The annual publication (1908) by the Imperial Cabinet, "Mouvement de la population de l'empire du Japon" (folio, pp. 357+27), covering the year 1905, deals almost wholly with vital statistics. Births, deaths, marriages, and divorces are shown in detail, and, where possible, comparison is made with the records of the nineteenth century, even in its earlier years. The figures for divorce show a notable reduction in the number of divorces since the revised code went into operation. Science has also shown its mastery over diseases that once scourged the country.

In connection with the recent development of irrigation in this country special interest attaches to the irrigation problems presented in the Murray Basin, in southeastern Australia. The subject is treated

PUBLIC LIB

in the *Annales de Géographie* by Paul Privat-Deschanel, who has personally investigated conditions in Australia. In the first article he described the region affected (a territory twice as large as France), the character of the soil, the precipitation, streams, and droughts. In the issue for May he shows how the water is acquired. In Queensland alone in ten years 960 wells were dug with a total depth of 221 miles, and a daily product of over 650,000,000 gallons. That the economic and social future of the country depends upon the solution of the water problem is indicated by the fact that in Queensland, in 1903, more than four million cattle perished from the failure of the pasturage. In two of the towns water was brought by rail and sold at twelve cents a quart.

The Italian Society for the Advancement of Science has issued its first volume of Transactions. It contains a number of the addresses given at the congress at Parma last September (see the *Nation* of October 31, 1907, p. 402). Among them are those of Senator Vito Volterra; of Prof. Giacomo Ciamician of Bologna on "Organic Chemistry in Organic Bodies"; Prof. Pio Foà of Turin on "The Biological Significance of Tumors"; and Prof. Maffeo Panteleoni of Rome on the "Progress of Economics." In addition, each section is publishing full accounts of its own proceedings, which may be obtained at nominal price by applying at 26 Via del Collegio Romano, Rome. Among matters deserving special mention is an account of the investigations of the Prince of Monaco in the prehistoric caves of Balzi Rossi, near Ventimiglia, and of the excavations of the Terramara made in September by Senator Giovanni Mariotti, professor in the University of Parma. After the congress had closed, an embankment of piles, the remains of a prehistoric people living in the pure bronze age, was found beneath the Via Emilia, lying at a depth of from twelve to twenty feet below the surface of a school garden at the east end of Parma. A photograph of these *palafitte* forms the frontispiece to the volume. A successful effort has been made to preserve these remains in the condition in which they were unearthed. Professor Mariotti will soon publish a full account of his explorations. This society will hold its next congress at Florence, October 18 to 25, in connection with the tercentenary of the birth of Torricelli, the inventor of the barometer. The congress will take action upon the international commemoration in 1911 of the hundredth anniversary of the publication by Amedio Avogadro of Turin of his discovery of the laws on which the molecular theory is based. As one of the objects of the society is the diffusion of scientific knowledge, any who feel interested in this aim are welcomed to membership; the address of the secretary of the local committee is Prof. Pasquale Baccarini, 4 Via Lammarmora, Florence.

The inactivity of the old Italian mathematical society, Matbesis, and, with the notable exception of the Circolo Matematico di Palermo, of the provincial and local societies, has led to the formation of the Italian Mathematical Society. The plan took shape at Rome during the recent sessions of the International Congress of Mathematicians. The first congress of the new body will be held at Florence in October at the same time as the second congress of the Italian Society for the Advancement of Science.

An Academy of Sciences for Finland will be established with headquarters in Helsingfors. One of the chief purposes will be the publication of investigations dealing with Finland.

Dr. Ludwig Mond, a manufacturing chemist of London, where he founded a laboratory of chemical research, has offered through the Accademia dei Lincei, of which he is a non-resident member, an international prize of $2,000 to be conferred every two years for the most important work in either pure or applied chemistry or chemical physics. The prize will be named in honor of the professor of chemistry in the University of Rome, Senator Stanislao Cannizzaro.

Dr. James Coe Culbertson, a physician of Cincinnati, died June 4. He was born in Ohio in 1840, served in the Northern army through most of the civil war, and was graduated from Bellevue Hospital Medical College in 1865. Since 1873 he had been editor and publisher of the Cincinnati *Lancet-Clinic;* from 1891-93 he was editor of the *Journal of the American Medical Association;* and since 1893 he had been professor of the principles and practice of medicine in the Cincinnati College of Medicine and Surgery. He was author of "Luke, the Beloved Physician" (1899).

The death is announced, in his fifty-first year, of Dr. Oswald Seeliger, professor of zoölogy in the University of Rostock. His works include "Entwicklungsgeschichte der Ascidien," "Studien zur Entwicklung der Crinoiden," "Tierleben der Tiefsee."

Admiralitätsrat Carl Chr. Koldewey, one of the superintendents of the great nautical institution, the Seewarte, in Hamburg, has died in his seventy-second year. He made his reputation as an Arctic explorer, sailing to Spitzbergen in 1868, and in 1869-70 to North Greenland, where he discovered Franz Joseph's Fjord.

Drama.

"*The Unicorn from the Stars" and Other Plays.* By William B. Yeats and Lady Gregory. New York: The Macmillan Co. $1.50 net.

"The Unicorn from the Stars," of which Mr. Yeats supplied the general plan and Lady Gregory a large share of the details, is one of the most ambitious productions of the Irish Theatre. In a prefatory note Mr. Yeats says that his idea was "to bring together the rough life of the road and the fine frenzy that the poets have found in their ancient cellar," and this, perhaps, he has succeeded in doing, though not in the most reasonable fashion. As drama, indeed, the piece has few claims to serious consideration, but as a study of various types of Irish character and an embodiment of the passionate national yearnings in the heart of the race, it is, in spite of its fantasy, remarkably effective. That it would be received with fervent enthusiasm by an Irish audience may be readily believed. Practically the play is an episode in the life of an ecstatic, Martin Hearne, who falls into trances, sees visions, and becomes convinced that he has a mission from on high. But he is in doubt as to the nature of it. until the chance word of a thieving beggar gives him, as he believes, the missing clue. General destruction, he proclaims, is the essential preliminary to the establishment of the new order, and he makes a beginning by leading a band of rioters against the richest house in the neighborhood. Soon afterward he is shot, accidentally, in a fray with constables and dies after confessing that he had misinterpreted his vision, "that it is in the minds of men that the battle has to be fought out." Everything, he says, must be brought to nothing once again. "Where there is nothing—there is God"—which sounds like the motto of a new nihilism. The charm of the piece lies in its characterization, its literary expression, and its poetical imaginings. Martin Hearne, in spite of his michievous delusions, is a sympathetic character. He is the idealist, pure and simple, in contrast with his two uncles, Thomas, the practical man of business, with a complete scorn for dreamers, and Andrew, who is a dreamer like his nephew, but with no power of initiative. A third dreamer is a poor priest, Father John, who, for heretical opinions, has been banished to a miserable little mountain parish where he will have none to lead astray. The other personages are four beggars, into whose mouths has been put some of the raciest peasant talk. Their conversation, with its flavor of the soil, is more vital, and, it may be added, more characteristically Irish than the speech of the more literary personages. They are presumably the literary progeny of Lady Gregory.

The other plays in the book, "Cathleen ni Houlahan" and "The Hour Glass," are both well known in this country. The appeal of the one is patriotic and of the other moral. The foundations of both are laid in the national superstitions which form a large part of the capital of the Irish theatre. "The Hour Glass" is, perhaps, the more Hibernian in spirit of the two, for although probably quite free from cynical intent, it might easily be made to bear an ambiguous meaning. It would be easy to exaggerate the importance of them as plays, impossible to deny their significance as first fruits of a veritable national drama.

Among the recent additions to the Shakespeare Library (Duffield & Co.), edited by I. Gollancz, is "Love's Labor's Lost," the first of a series of reprints from Dr. F. J. Furnivall's "Old Spelling Shakespeare." The editor's Forewords, though brief, constitute one of the best discussions of the date of the play, and, incidentally, its style: and his name is a sufficient guarantee that the spelling of the 1598 Quarto has been accurately reproduced. The typography of the book is neat and attractive.

We have before us two issues of the Bankside-Restoration Shakespeare (The Shakespeare Society of New York) for the current year, viz.: "Hamlet and the Ur-Hamlet," with an introduction by Appleton Morgan, and "The Tempest," with an introduction by Frederick W. Kilbourne. In the second of these volumes we have printed on opposite pages for convenient comparison the First Folio text of "The Tempest" and the wretched adaptation of that play by Davenant and Dryden. This latter has now no interest, of course, except as a literary curiosity of a rather repulsive kind. To reprint it, however, facing the genuine Shakespearean text brings into the fullest light the vicissitudes of Shakespeare on the English stage, and the degradation of Restoration taste. The "Hamlet" volume contains the text of the Second Quarto and a new translation of "Der bestrafte Brudermord," on opposite pages. In justice to Mr. Morgan it should be said that he does not take the German play as a translation of the actual "Ur-Hamlet"—that is, the pre-Shakespearean "Hamlet," concerning the existence of which we have such abundant evidence—but as the nearest thing we have to that play. It will be observed, as the editor remarks, that this volume really has no place in the Bankside-Restoration series, and has been published in that series merely for the convenience of the Society. The present publication will undoubtedly facilitate somewhat the study of the relations of the different Hamlet plays, but it would have been better to have reproduced the original German text. The Introduction is characterized by a rather light-hearted acceptance of Shakespearean "discoveries" and contains, besides, so many typographical blunders that it seriously diminishes one's confidence in the accuracy of the reprint of the Quarto which follows in the volume.

Brentano's has just published the translation, by Arthur Symons, of Hugo von Hofmannsthal's version of the "Electra" of Euripides, which was played in this city last winter by Mrs. Patrick Campbell. It is a vigorous piece of work, classic in form and spirit, worthy of a better interpretation than it received upon the local stage.

The Pioneers of London closed their season with a production of John Masefield's "Nan," which has an unpleasant story. It seems to be the natural tendency of all independent theatrical societies to go out of their way in the search for the disagreeable. But in "Nan" there appears to be some genuine dramatic stuff, and a certain amount of truth. The heroine, a penniless orphan in the family of her uncle, is the object of general contempt because her father has been hanged for murder Then comes a startling change. The innocence of her sire is established, and the government sends her fifty pounds by way of reparation for the little error that had made her an orphan. Nan, strangely enough, is not grateful, but rather embittered by the realization of all the senseless injustice to which she has been exposed, and when her false lover, who has heard of the fifty pounds, tries to restore himself to her good graces, she drives a knife into his heart. and then rushes out and drowns herself. There are truth and imagination in this stroke of tragedy as the one result of relenting misfortune. The current reviews convey the idea that the piece is badly in need of editing. The feature of the performance, all agree, was the Nan of Lillah McCarthy.

The list of French actors to be seen in London this season includes Bernhardt, Réjane, Jane Hading. Jeanne Granier, Coquelin, and Mmes. Despréś and Bartet. The Anglo-French Exhibition has of course a good deal to do with it.

Judgment has been given in Paris in the case of "Le Foyer," and it goes against M. Claretie of the Théâtre Français. (See the *Nation* of May 21, p. 473.) It will be remembered that this piece, by Messrs. Octave Mirbeau and Natanson, was accepted by M. Claretie and put into rehearsal until the latter, believing that one of the characters was libellous, refused to proceed with it further. The authors took the position that M. Claretie, once having accepted the play, could not refuse to fulfil his promise of producing it. M. Claretie refused to take this view, and declared. moreover, that he would resign if any attempt was made to impair his authority. The decision of the court orders M. Claretie to resume the rehearsals of "Le Foyer" within two weeks under penalty of 100 francs fine for every day's delay during a month, after which period, if the piece is not under rehearsal, the case will return to the courts.

Fru Hennings, the leading Danish actress, has just retired from the Theatre Royal of Copenhagen, where she had been acting since 1870. She created the parts of Nora in "A Doll's House," Hedvig in "The Wild Duck," and the mother in "Ghosts."

Music.

Another guide to the Wagner operas, by Cuthbert Hadden, is to be issued in London by T. C. & E. C. Jack. It will be illustrated by twenty-four facsimile reproductions of colored drawings by J. Byam Shaw.

Harvey Worthington Loomis has not a superior among living American composers, and although his pen is somewhat overprolific, nearly everything he writes deserves attention. In his latest production, "The Lyric Song Book" (Frank D. Beattys & Co.), he appears as composer only once; the other 129 songs are selected from the treasures of folk music and the works of composers of many countries. The collection is intended for schools as well as the home, and it is worthy of all praise, so far as the selecting and the editing are concerned. But why change the titles of two of Grieg's best-known songs, "The First Primrose" and "Ragnhild" to "Arbutus" and "The Fairy Ring?"

The Universal Edition of Music (New York: Breitkopf & Härtel) calls for a word of praise. The print is remarkably clear and beautiful, and the editing is in the best of hands; for instance, Eduard Schütt has revised Schumann's "Carnaval," and Raoul Pugno the sonatas of Chopin, in accordance with the latest lights.

Felix Weingartner is writing both the words and music for a music-drama, "Golgotha." The text is already finished, and was read before a Munich audience recently by Weingartner himself. This drama is expected to fill two evenings. The first part deals with the tragedy of John the Baptist; the second part portrays Calvary, even to the details of the crucifixion.

The death is reported from Weimar of Alexander Wilhelm Gottschalg at the age of eighty-one. He was associated for a time with Liszt, edited some of Liszt's works, and published with him a collection of the finest organ music, "Repertorium für die Orgel." He himself was both an organist and a teacher. At one time he edited *Urania*, later the *Chorgesang*, and he was also critic for Dittes's "Pädagogisher Jahresbericht." He was author of "Kleine's Handlexicon der Tonkunst" (1867).

Art.

El Greco. Por Manuel B. Cossío. 2 vols. Madrid: Victoriano Suárez.

Our appreciation of the art of Domenico Theotokopulos is the result of the efforts of the last generation of art historians. For a long time this peculiar genius remained in obscurity, ignored or misrepresented. Attention was first drawn to him by Madrazo, author of the catalogue of paintings in the Prado Museum at Madrid; but the first really noteworthy attempt to sketch El Greco's development and to expound the peculiarities of his art, was made by the author of "Velázquez und sein Jahrhundert," Carl Justi, the Nestor of German art historians. Herr Justi's article in the *Zeitschrift für bildende Kunst* (New Series, vols. VIII. and IX.) may be regarded as the introduction of the painter to the German public. This was, however, only a sketch without any pretension to completeness; for Justi was not sufficiently familiar with the works of El Greco to write a monograph on his art and personality. The exhibition of the works of Theotokopulos, in Madrid, in 1902, excited considerable attention and provoked several treatises. Among them we may note the series of articles "Zur Kunst von 'El Greco,'" by Major Zottmann, in the *Zeitschrift für christliche Kunst*, 1906. In these we have a clearly defined outline of the different stages of El Greco's art, based on an exact personal acquaintance with the works of the painter in Spain and other countries. The biographical introduction, however, is scanty and is not based on original research. The essay of Herr Zottmann is, next to Señor Cossío's work, the most important contribution to the subject. The lack of a comprehensive monograph on this genius has been felt by all students of the history of painting; and the lacuna is now filled by the Spanish scholar and critic, Señor Cossío, who presents much new documentary evidence.

He starts with a consideration of the obscure points in El Greco's life, such as the date of his death (which occurred in 1614, and not, as generally said, 1625), his native land, his name, and the supposed portraits of him. The real story begins with the discussion of El Greco's Italian period. He must have come at a very early age to Venice, where he received his artistic education, probably in the studio of Titian, and fell under the influences of Tintoretto, Veronese, and the Bassani. From Venice, he went to Rome, where he worked for the Farnese.

Strange to say, this man, who was destined to become so distinguished a colorist, was renowned during this period (about 1570) as a miniature painter. Few works belonging to his sojourn in Italy are known, although some of them may be passing under the names of Paolo Veronese, Tintoretto, or Bassano. But his art did not find full space for its development before his settlement in Spain. The exact date and motive of El Greco's coming there are not known. Señor Cossío states the different hypotheses without accepting any of them. The first documentary evidence of his activity in Spain, dated 1577, relates to the work for the nunnery of Santo Domingo el Antigno, in Toledo. With this date begins the series of powerful, sometimes strange, creations that adorn, or adorned until recently, the sanctuaries and chapels of this town. Although at the time of the arrival of the painter Toledo had ceased to be the residence of the court, it was still the seat of the most powerful ecclesiastic of Spain, the Archbishop of Toledo. The primate and his wealthy clergy were the patrons of El Greco's art. Not only did he decorate church after church, and monastery after monastery, but his powers as portraitist, sculptor, and architect were also in great demand.

El Greco's change from the Italian to the Spanish manner was not sudden; and one of the great merits of Señor Cossío's research is his noting of the painter's individuality in his earliest works, and the tracing of its development to maturity. Moreover, Señor Cossío shows clearly what art owes to this master. Not much more than fifty years ago Passavant said in his "Christliche Kunst in Spanien," that the art of the "genial, but somewhat extravagant," Greco exercised no influence on the development of painting in Spain. Justi was the first to break with this presumption; and Señor Cossío argues strongly that the apparition of the genius of Velázquez cannot be explained without El Greco. Señor Cossío's style as a writer, we may add, is extraordinarily clear. The volume contains a catalogue of the paintings of El Greco, a bibliography with critical comment on individual works, and an elaborate index.

The second volume gives reproductions of almost all the authentic works of El Greco, and, as material for comparison, pictures by contemporary artists. Toledo is the only place where the abundance of well-preserved paintings of the master enables one to form a clear idea of his power, although the Escorial and the Prado are also rich in his productions. This country, too, contains some examples of his art. The Boston Museum of Fine Arts possesses his portrait of the monk and poet, Fray Feliz Palavicino; the Chicago Art Institute, the admirable Assumption of the Virgin, formerly in the collection of the Infante Don Sebastian; the Hispanic Society, several pictures; and the Metropolitan Museum of Art, a Nativity.

"Fifty Years of Modern Painting: Corot to Sargent," by J. E. Phythian (E. P. Dutton & Co.), is not a well-proportioned book. It is written by an Englishman for Englishmen, and therefore unduly magnifies British painting, and it is written by a believer in "progress" in art, and is therefore unduly neglectful of all who stand aside from the direct stream of that progress. The Preraphaelites and the impressionists loom large in it—other painters are seen through the wrong end of the telescope; and this in spite of an elaborate and evidently genuine attempt at impartiality. Ingres, for instance, is dismissed with a line or two and all the nominally "classic" painters are given short shrift. But the most curious result of the author's point of view is the transformation of some of the men he really admires. Millet appears merely as a realist and Corot as a precursor of impressionism. Seeing in them apostles of the "return to nature," Mr. Phythian is entirely blind to the truly classic nature of their art, thereby missing nine-tenths of its permanent value. The painters of America are more fairly treated than might have been expected. The book is of no importance, critically, but may have its uses as a popular account of the art of the last half of the nineteenth century.

There is an infinite deal of nothing in Beaumont Fletcher's "Richard Wilson, R. A.," the latest volume in the Makers of British Art (imported by Charles Scribner's Sons). By dint of much repetition, a very little biographical fact and a very few ideas are made to fill out the looked for number of pages. That the facts are so few may well be no fault of the author, but as much cannot be said for the paucity of ideas. Indeed, there is only one idea that can be remembered—an idea that Wilson's art is essentially Celtic and to be accounted for by his Welsh origin and birth. This is dwelt upon at wearisome length, to the exclusion of any intelligible statement of the qualities of that art. A little real criticism would have been welcome both to those who know and to the greater number who do not know Wilson's paintings. All we can get from the book is to be found in the illustrations.

The centennial of the birth of Karl Spitzweg gives timeliness to the "Spitzweg-Mappe" (Munich: G. D. W. Callwey), which contains reproductions of a number of pictures by that artist.

Bernhard Berenson, in the *Rassegna d'Arte* for May illustrates and comments on the important Madonna by Masaccio recently discovered in the Sutton collection, Brant Broughton, England. The Brant Broughton Madonna, capitally reproduced in the article, must count as the most monumental of the master's works. In a general discussion of the chronology of Masaccio, it is asserted that his short life is so fully filled by the works we know to be his that there is absolutely no room for the various early panels ascribed to him for the Tabitha of the Brancacci Chapel, nor yet for any part of the frescoes in S. Clemente, Rome. In general we are in accord with these views, but any too rigorous application of them seems a straining of what is after all merely presumption.

Francesco Malaguzzi Valeri, in compiling the new catalogue of the Brera, "Catalogo della R. Pinacoteca di Brera" (Bergamo: Istituto Italiano d'Arti Grafiche), has sensibly followed approved German models. The volume is of pocket size, contains numerous small cuts, facsimiles of all signatures, concise discussions of provenience, attributions, etc., with bibliographical notes; even the numbers of the standard photographs are duly recorded. The catalogue follows the order of the present strictly historical arrangement, but alphabetical indexes of subjects, artists, and places of provenience make it easy to use the book for reference. It is in all a model of its kind, and we would welcome the day when our American galleries were catalogued with a similar science and good sense. Corrado Ricci, former director of the Brera, now general commissioner of fine arts, contributes a brief historical introduction. The book costs five lire.

The treasures brought to light by building operations in Rome the past year have been abundant and important. In the convent garden of Santa Susanna, the site of the new Ministry of Agriculture, a section of the so-called Servian wall, the remains of a prehistoric necropolis, and some curious gold bracelets were found; outside the Porta Portese a number of tombs of the period of the empire, a fine statue of a woman, a portrait bust of a man, fragments of bas-reliefs with inscriptions, and the cover of a sarcophagus bearing a full-length reclining figure with a boy standing beside it; at the Villa Patrizi, an amphora containing over 4,000 splendidly preserved silver coins of the third century. Among them was a very rare Antonine of the Empress Cornelia Supera. A circular base, probably a part of a large candelabrum, carved with acanthus leaves, *putti*, lizards, snails, crabs, frogs, locusts, and other living things, was also found there. On the ancient Via Collatina, near the gate of San Lorenzo, workmen discovered a magnificent sarcophagus about twenty inches high, with bas-reliefs of unusual skill on the sides and ends. It was protected by an outer case, and is perfectly preserved. It bears no inscription, but a portrait, supported by Victories between barbarians and armor, on one side and the subjects of the other bas-reliefs suggest that the owner, who has not yet been identified, was a conqueror of barbarian tribes. All these objects have been placed in the Museo Nazionale delle Terme.

The director of the Forum excavations has been visiting the ruins of Roman Africa. Thamvagadi (or Tivaad) has been generally believed to have been founded by Trajan, but Sig. Boni found that the Trajan walls were built over others, which go back to the beginning of the empire. The magnificent baths and the triumphal arch belong to the period of Trajan and the Antonines, but the library, the theatre, and the Capitoline temple are buildings which show characteristics of the time of Cæsar or Augustus.

A discovery of great importance made by the members of the British School of Athens during their excavations at Sparta, is announced by the London *Times*. In the precincts of the temple of Artemis Orthia, and partly beneath the sixth century temple, discovered in 1906, a smaller temple, dating from the eighth or ninth century B. C. has been brought to light. This early shrine, which was constructed to contain a primitive wooden image of the goddess, was roofed with painted tiles and built with unbaked bricks set in a framework of wooden beams, all resting on a foundation of undressed stones and slabs. The stonework of the foundation is alone preserved, but it was found covered with débris and bricks. In a side wall are sockets at regular intervals for the beams of the framework, and corresponding to them, in lines across the floor, are stone supports, or bases, for wooden pillars supporting the roof. The temple was divided lengthwise by a row, or rows, of wooden columns. It is symmetrically placed with the great eighth century altar discovered last year, from which it is separated by a paved area of cobblestones, apparently coextensive with the earliest *temenos*, or sacred enclosure. Here an enormous number of votive offerings has been found, similar to those laid bare in previous years, except that the series is now enriched by a number of finely worked ivory lions devouring their prey and by an early seventh century ivory tablet representing a funeral scene with mourners. The great interest of this newly discovered building is its age. It is apparently the oldest Greek temple yet brought to light, and serves as a valuable specimen of a primitive Dorian sanctuary.

The Art Institute of Chicago will hold its twenty-first annual exhibition of oil paintings and sculpture October 20 to November 29. The works must be by contemporary American artists never exhibited before. The jury of selection for New York consists of Henry W. Ranger, C. Austin Needham, Albert L. Groll, and John Gutzon Borglum. The Art Institute is indebted to N. W. Harris for an annual prize of $500, to be awarded under the direction of the permanent art committee of the Institute for the best picture in the exhibition painted by an American artist within the three years preceding.

The pictures of the late Humphrey Roberts were sold by Christie, in London, on May 21, 22, and 23 for something over £65,600. Among the more notable items were the following: Constable, Opening of Waterloo Bridge by George IV., £1,155; Brighton Beach, £556; View of a Farm, £336; D. Cox, The Setting Sun, £294; G. Mason, Landscape in Derbyshire, £462; Millais, Stella, £1,102; The Gambler's Wife, £2,205; The White Cockade, £1,102; The Moon Is up and yet It Is Not Night, £997; Sir W. Q. Orchardson, Hard Hit, £3,465; Music When Sweet Voices Die, £336; A Tender Chord, £430; Escaped, £546; Briton Rivière, A Stern Chase Is a Long Chase, £315; J. Stark, Landscape, with a cottage, £231; J. M. Swan, A Broken Solitude, £273; The Piping Fisher-Boy, £304; Turner, The Trossachs, £210; F. Walker, The Plough, £420; Watts, Pretty Lucy Bond, £577; Loch Ness, £472; J. C. Cazin, Landscape, with a barge on a canal, £304; View near a Farm, with a man loading a cart, £378; Corot, Edge of a Wood, with two peasant women and a cow, £2,257; A Quiet Lake, £892; Landscape, with three peasant women, £1,470; Woody Landscape, £210; Forest Glade, with a woodman, £630; Landscape, with a peasant woman, £325; Woody Stream, with buildings and bridge, £735; Sunshine and Vapour, a river scene, £420; C. F. Daubigny, A Village, with a church and a river, £630; H. Fantin-Latour, Dahlias in a Vase, Grapes, and Peaches, £420; H. Harpignies, Evening, a moorland landscape, £787; The Lake, £210; L. L'Hermitte, The Evening Meal, £840; J. Israëls, Age, £1,417; Sailing the Toy Boat, £1,680; The Widower, £1,260; Washing Day, £1,155; Waiting, a fisherman and his child, £756; C. Jacque, The Flock, £2,625; Watering Horses, £567; J. Maris, Ploughing, £614; The Zuyder Zee, £367; A. Mauve, Ploughing, £1,023; Going to Church, Winter, £283; Millet, Seaweed-Gatherers, £409; Troyon, The Fisherman, £1,102; Sporting Dogs, £483; Landscape with Cattle, £1,207; J. H. Weissenbruch, Sunny Pastures, £267; Gainsborough, View in Suffolk, a woody landscape, £861; Mrs. Dorothy Hodges, £1,050; the Hon. Campbell Skinner, £294; Hoppner, The Gipsy, £577; Nasmyth, Dunkeld Ferry, £273; Raeburn, Dr. Handasyde Edgar, £252; Reynolds, The Hon. Mrs. Brown, £315; Romney, Lady Taylor, £420. The following drawings were sold: A. Mauve, Landscape, with a woodman, £351; Bonington, The Wagon, £210; A. C. Gow, The Garrison Marching out with the Honors of War, Lille, 1708, £267; Turner, Sallenches, Savoy: St. Martin, £630; Aske Hall, Yorkshire, £441; Folkstone, £546; Kirkby Lonsdale Churchyard, £840; Lake of Geneva, Mont Blanc in the distance, £693; Sleaford, Florence from the Road to Fiesole, £210; P. de Wint, View in Lincolnshire, £220.

We note the death of John Fulleylove, well known for his paintings and for his books of architectural illustrations. Mr. Fulleylove was born in 1847. He began his career as an architect, but was early deflected into painting as a profession. Among his works are "Oxford," "Pictures and Studies of Greek Landscape and Architecture," "Stones of Paris," "The Holy Land," "Westminster Abbey."

Finance.

THE RAILWAY BANKRUPTCIES.

In the closing week of May, when signs of a turn for the better in finance and industry were appearing, the Wabash-Pittsburgh Terminal Railway, with $10,000,000 stock and $49,500,000 bonds, went into the hands of receivers. This week, when the spirit of optimism had become still more general, the Wheeling and Lake Erie Railroad, with $16,900,000 stock and $25,000,000 bonds, similarly defaulted on its payments. The interest in these two incidents was not diminished by the fact that one insolvency was brought about through inability to pay off notes issued in the recent period of dull investment markets. The Pittsburgh Terminal failed because of inability to meet the June 1 interest on its regular mortgage bonds; but it so happened that the Wheeling and Lake Erie, whose stock was owned by the Terminal company, had put out $8,000,000 in three-year 5 per cent. notes in 1905, in connection largely with the Terminal undertaking. These notes are due to mature on August 1; the Terminal insolvency made their payment impracticable, and last Monday afternoon, the Wheeling and Lake Erie also asked the protection of the courts.

Thus the floating debt, incurred so rashly on the eve of the panic of 1907, has been the immediate cause of present railway embarrassments. Nearly $300,000,000 of such short-term notes were outstanding against the railways at the opening of the present year; largely from lack of funds to meet these maturing notes, seven railways had gone into bankruptcy before the Pittsburgh Terminal insolvency. The nine railways which have now defaulted since January 1, including the two insolvencies of the past three weeks, have outstanding considerably more than half a billion dollars in stock and bonds.

Large as this sum may appear, it is only a trifling part of the total railway capitalization of the country, which, according to "Poor's Manual," runs to the neighborhood of $16,000,000,000. A year after the panic of 1893, the Interstate Commerce Commission reported that, in the period of shaken credit, no less than one-fourth of the country's entire railway capitalization had passed into receivers' hands. Clearly, the showing of 1908 to date is vastly better; yet it leaves the inquiry as to whether these troubles have reached an end.

This cannot be positively affirmed. But it is safe to say that the worst is over, and for two reasons: First, the nine railways which have thus far confessed insolvency were in every case companies which had for some time been under suspicion. They were known as weak concerns, and would in most cases have had to face a precarious future, even without the panic. Nearly one-half of them were in the so-called "Gould system"—the bequest of the late Jay Gould to his family, comprising lines many of which had been weakened originally by the peculiar practices of that notorious financial adventurer, and had enjoyed only a slipshod management since his death. The railways not in this list have for the most part been earning and paying dividends, with a handsome margin against trade reaction. In 1893, however, even the better-managed companies were so weak that the Interstate Commission reported 61 per cent. of entire railway share capital of the country to have received that year in dividends no return whatever.

Second, a still more encouraging fact is that most of the early maturities of railway short-term notes have now passed by, and that the day of reckoning for others still outstanding is reasonably remote. Notes which matured in the period of shaken credit and diminished earnings shortly following the panic, would obviously encounter difficulties which may not arise a year or more from now, when the process of recuperation has restored credit to normal. Besides the receiverships already noted, may be mentioned the fact that the Erie would have been allowed by its managers to go bankrupt April 8, on the maturing of its $5,000,000 notes, but for E. H. Harriman's spectacular intervention. Some maturing notes, such as those of the Boston and Maine in March and of the Chicago, Rock Island and Pacific in April, were taken up with bonds; for others, like those of the Missouri Pacific in February, of the Interborough Rapid Transit in May, and of the Chesapeake and Ohio which are nearly due, an extension or substitution by other note issues was provided. During the rest of 1908 few railway note issues of importance, except perhaps the St. Louis and San Francisco's $9,000,000 of December 1, come up for payment. The great mass of outstanding short-term notes were put out by the railways in the sudden blockade of the investment market early in 1907, and they were made as a rule to run three years. By 1910, it is reasonable to expect a return to equilibrium.

In "Fifty Years in Wall Street" (Irving Publishing Company), Henry Clews endeavors to carry to date his volume of a banker's anecdote and reminiscence, which, under the title of "Twenty-eight Years in Wall Street," appeared in 1888. The earlier book, while superficial to a degree, had a certain gossipy atmosphere of the Stock Exchange, which rendered it readable, and made it of some value as a reflection of the Wall Street point of view. The new chapters add little of importance. Mr. Clews is enterprising enough to bring his narrative up to the panic of 1907; but when trained economists are still at a loss to assign with certainty the causes of that remarkable event, and the larger meaning of its phenomena, Mr. Clews could hardly be expected to solve the riddle. His explanation, that "the main cause was far too large a mass of credits for the amount of cash in which they were redeemable," will do well enough for people who do not care to think such problems out. It is not creditable for an author or publisher, in re-issuing a book under a new title, to neglect all changes in the older chapters. To be told, in a professedly up-to-date work, that August Belmont "was born in the Rhenish Palatinate sixty-eight years ago," that Addison Cammack "is about sixty years of age," that Edmund Clarence Stedman "is one of the notable figures of Wall Street," that Russell Sage "lives on Fifth Avenue," and that Austin Corbin has "within a year become a prominent figure in the financial world," will scarcely add to the value of a book on Wall Street.

BOOKS OF THE WEEK.

Cleveland, Ohio

A Week in the White House with Theodore Roosevelt

A Study of the President at the Nation's Business

By

WILLIAM BAYARD HALE

9 Full-page Illustrations
Crown 8vo, $1.25 net

As a result of a week's stay in the White House in the course of which he was privileged to observe President Roosevelt from morning till night, at work and in his recreations, Dr. Hale has written the most graphic and vivid study of the President that has yet appeared. The unique opportunity, the vivid and incisive characterization, the striking and novel record of the transaction of state business, the vigorous and effective handling of the subject all combine to give this study of Dr. Hale's an immense appeal.

The Nation.

NEW YORK, THURSDAY, JUNE 18, 1908.

The Week.

The cool giving out of the platform of the Chicago Convention, as approved by the President, in advance of the first session of that body, and before the platform committee has been appointed or has met, is about the last touch in cavalier disregard of appearance, of precedents, and of the feelings of the delegates. After this, there can be no decent reason for further pretence or concealment. The President is treating the Convention as the potter treats clay; of the same lump making one vessel unto honor, and another unto dishonor. And he looks for no protests whatever by the delegates. "Shall the thing formed say to him that formed it, Why hast thou made me thus?" It is either splendid audacity in the President, or sublime unconsciousness, which leads him to go straight to his object without one thought how his claim of complete ownership of the party will impress it. It is hard to imagine him getting angry, as Sir Robert Peel once did, because Cobden confounded the Prime Minister with the government. Sir Robert disclaimed anything more than his due share, but Cobden stoutly rejoined: "I treat him as the government, as he is in the habit of treating himself." President Roosevelt certainly has the habit of treating himself as the whole government and the entire party.

This break with the settled practice, in announcing the complete platform before the Convention has been called to order, is so violent that one suspects a strong motive for it. What was the situation at Chicago? One in which there was gathering danger that there might be a contest over certain resolutions. Large delegations were on the ground, ready to go before the platform committee with arguments for or against various proposed planks. Telegrams of protest and appeal were showering upon prominent members and the prospective committee on the platform. In a word, a state of division and even insubordination was threatening, which no resolute man in control like Roosevelt could tolerate. Hence the move seemed distinctly meant to head off revolt and to force the hand of the President's opponents. The chief matter in dispute was the President's plank calling for limitations upon the writ of injunction. That subject he urged and re-urged upon Congress, only to meet with repeated and rather humiliating refusals to accept his views. He apparently desired to compel the Convention to do what he could not force Congress to do. The anti-injunction issue has been taken up clamorously by large numbers of workingmen, therefore the bone of an anti-injunction plank must be thrown to organized labor. This is clearly part of the pacificatory arrangement which the President has been trying to make with Mr. Gompers and other labor leaders.

> It has precipitated panic, blighted industry and trade with prolonged depression, closed factories, reduced work and wages, halted enterprises, and crippled American production.

This is an extract from the Republican national platform—not, however, of 1908, but of 1896. It shows how the mind of Republican platform-builders worked, after a serious financial panic, in tracing responsibility to the party in power. There were, to be sure, observant economists and experienced financiers in 1896, who replied indignantly that the panic of 1893 was immediately brought on by the reckless Silver-Purchase Act of 1890, a law proposed by a Republican Administration and passed in the House of Representatives with a unanimous Republican vote in its favor and a unanimous Democratic vote against it. It was also pointed out, by way of remonstrance against the "panic plank," that a Democratic President had forced upon Congress the repeal of that infamous measure, and had preserved the government's financial integrity by fearlessly using the public credit to maintain the gold reserve. But no; the platform was not to be shaken by such irrelevant considerations; the lesson of the panic was that "every consideration of public safety and individual interest demands that the government shall be rescued from the hands of those who have shown themselves incapable of conducting it"—who, of course, were the Democrats, in office during the panic of 1893.

How would these same students of public and private finance fix the responsibility for the panic of 1907, when *they* were so unlucky as to be in power? This is the interesting line of reasoning in the platform submitted for ratification in 1908:

> Nothing so clearly demonstrates the sound basis upon which our commercial, industrial, and agricultural interests are founded, and the necessity of promoting their continued welfare through the operation of Republican policies, as the recent safe passage of the American people through a financial disturbance, which, if appearing in the midst of Democratic rule, or the menace of it, might have equalled the familiar Democratic panics of the past.

That is to say: We have passed through a terrific panic, for which the party in power might be blamed, if that party were the Democratic. How much worse it would have been, if a Democrat had occupied the White House! With a Democratic majority in Congress, where should we have procured the smiling sunshine and abundant moisture which have started the grain crops of 1908 with so bright a promise, and have brought a thrill of hope into the country's prostrated industries? Every one knows who caused the corn crop failure of 1894, which blighted the reviving hopes of *that* after-panic year. We do not remember to have seen the familiar theory of the Republican party as an earthly Providence more convincingly set forth than in the published draft of the party platform. It has, so far as we can see, only one false note—those "familiar Democratic panics of the past." The phrase means 1893 and 1857, of course; but where are we to classify 1873, coming on the heels of two of the greatest Republican majorities, and the longest consecutive period of Republican ascendency, in our history?

"How much did your brother spend for it?" This is, unfortunately enough, the question which will be asked of Secretary Taft from the moment he accepts the nomination. The New York *Herald* of Monday, for instance, prints an interview with Charles P. Taft, in which he was frankly asked whether he had not thus far laid out $600,000 to win the nomination for his brother. "No such thing," was Mr. Taft's reply; "no such amount of money has been spent. It is ridiculous." Perhaps it was a ridiculous guess. Certainly, the rumors which have been flying around Ohio as to what it has cost Charles Taft to get Boss Cox and the organization into line are so exaggerated as to carry their own refutation with them. But Mr. Taft is handicapped not only by being Roosevelt's echo, but by having an immensely wealthy brother who is known to be willing to make any sacrifice to land the Secretary in the White House. His enemies will make the most of this, and put forth absurd stories of Charles Taft's outlays until such time as that gentleman states the exact figure and explains just how the money has been expended. Secretary Taft has expressed his desire for a law compelling the publicity of campaign contributions. Now that his own party has denied him this comfort, we look to him to have them published of his own accord—including those sums spent in promoting his candidacy before the Convention met.

In view of the attitude of the Republican leaders towards ship-subsidies, it is decidedly ungrateful for C. H. Cramp to propose removal of tariff taxes as the real need of shipbuilders. In an interview in the Philadelphia *Ledger*, he says:

> Without raw materials free of duty it is impossible to build steamships of the type of the Lusitania and Mauretania in the United States and place them on the ocean in competition with England and other foreign countries.

He adds that he has worked for the tariff for years, but is now convinced that it is inapplicable to the shipping industry. "We levy a tax upon all goods that come into this country, but you can't do that with ships, and there is the story." Mr. Cramp was even so cruel as to deny that cheaper materials would mean lower wages. "We would still pay high prices for skilled work, but would expand our market and add greatly to the number of men employed." This is rank blasphemy in the eyes of all good protectionists, and something ought to be done to punish Mr. Cramp. We suggest that he be forbidden to make any further contributions to Republican campaign funds.

The rumor from Cuba by way of Mexico of a fund for another revolution to take place as soon as the retiring American troops have reached home, is an echo of what has long been talked in the cafés of Havana. At the same time, it is not to be dismissed as mere idle gossip. Unfortunately, revolutions in Cuba are dirt cheap. Any wealthy banker or sugar plantation owner can afford that luxury, and it is undeniable that many Cubans, and many Americans as well, are determined that the present experiment, and every future effort to teach the Cubans to govern themselves, shall fail. They will be satisfied with nothing less than annexation. Hence, in the Mexican rumor there is an unpleasant possibility, which is not lessened by the fact that the political conditions in Havana are growing worse. The triumphant insurgents are quarrelling among themselves and breaking up into smaller and smaller groups. There being no real issues before the republic, it is merely a question of who shall hold the offices. No strong man has arisen to fight for an independent and stable Cuba, and the early withdrawal of the American government after the hasty completion of a large amount of new organic law, adds to the unrest. A symptom of this is the 12 per cent. interest asked for money lent in Havana on first-class real-estate mortgages. Cuba is suffering, too, from a falling off in revenues and business due to the prevailing bad times.

Mexico now has a "wave" of anti-American sentiment. The merciful thing about waves of anti-foreign feeling, as of crime, hydrophobia, and of Merry Widow hats, is that they *are* waves, and, passing away, leave the soul in a state of beatific placidity. Mexican hostility to this country is hard to imagine, after the notable way in which the United States and Mexico have been coöperating for the last two years for peace and progress in Central America. Nor can we put aside the constantly growing community of interests between the two countries as American capital continues to pour into Mexican railways, mines, and plantations. After making the usual discount for the exaggerated felicitations that accompany state visits, it is still impossible to believe that Mr. Root's recent journey left no better feeling behind it. It is probably to the growing friendship of the last few years that whatever "wave" of animosity there is in Mexico may be ascribed. It is the inevitable reaction. The republic to the south has its parties, and after a long innings for the pro-Americanos the anti-Americanos are now having their say. And, of course, the same body of facts will serve both sides. American capital can develop Mexico or enslave it; coöperation in Central America enhances Mexico's reputation or conceals sinister designs on our part; and the presence of our fleet in Magdalena Bay is an augury of extreme good-will on both sides, or the first step towards a grab of territory by the United States.

The report that the British Admiralty is planning to go us "one better" by building a monster battleship of 21,000 tons within the next eighteen months is far from incredible. It illustrates the folly of this or any other country trying to surpass England in the race for naval power. Our own new ships of 20,000 tons are supposed to be better all-round vessels than the Dreadnought; but no sooner have we resolved on them than England surpasses her Dreadnought with the St. Vincent of 19,250 tons, to be at sea two years before ours, just authorized by Congress. As if this were not enough, she must needs jump ahead again and plan her 21,000-ton vessel, also to be ready for sea about the time the Florida and Utah are launched. Moreover, she purposes to mount 13.5-inch guns and to use gasolene engines. England has shown us the way with submarines, torpedoes, scout cruisers, turbine engines, and high-speed destroyers. There was a time when the Admiralty was just as slow to move and to adopt new ideas as our own bureau chiefs. It even repeated error after error with the same solid satisfaction.

That our government had joined with the British Foreign Office in friendly representations to Belgium as to the conditions under which the cession of the Congo Free State is to be effected, is first made known, so far as this country is concerned, in a dispatch from Brussels published last Tuesday. But on April 15 the Belgian Minister of Foreign Affairs declared in the Chamber:

> Two Powers, England and the United States of America, have thought it advisable to communicate to us their views. In a friendly spirit they have formulated certain wishes, submitted to our judgment certain measures. They have asked us how we interpreted the conditions of the Berlin Act regarding the betterment of the positions of the native races, and the freedom of trade now established.

At that time the Belgian Minister declined to enter more specifically into the nature of the Anglo-American proposals. Now we learn that among the desiderata formulated by us and accepted by the Belgian government are absolute freedom of commerce in the Congo, immunity from molestation for our missionaries, and a "humane and equitable" policy towards the natives. This is good news, after the recent rumor that the entire annexation treaty was in danger.

In the atmosphere of the Spanish Main the tradition of piracy still lingers, but the adventures of the steamship Goldsboro show that the game grows more difficult every year. To load a ship with what is practically a stolen cargo and sail out into the Caribbean under the protection of no nation's flag, argues courage and imagination. It is true that about two years ago a Cuban banker did succeed in making good his escape, together with a large fortune belonging to other people, by sailing on his own ship for Venezuela, where, under the protecting wing of Castro, he is reported to be prospering. But it is a different thing to start out on a Central American peddling expedition with a stolen pack and in a stolen cart. Moreover, manners in the Caribbean have been lately improving. Along the Chinese coast, in the South Sea Islands, and near the Persian Gulf, the old profession has survived; though even there the wireless telegraph and the ever-ready torpedo-boat are hurting the business. But an American who follows in the footsteps of Kidd and Lafitte, we can only look upon as an interesting survival in an age when there are insurance funds to be borrowed, railways to be merged, and banks to be directed.

Dr. Dudley A. Sargent, the director of the Harvard Gymnasium, calls attention in the *Harvard Graduates' Magazine* for June to the great improvement in the physique of both college athletes and students during the last twenty-five years. The average weight and height of the Harvard student of 1880 were just about the same as of the American youths from twenty-one to twenty-six years of age who entered the Federal army at the outbreak of the Civil War. The present-day undergraduate is an inch taller, from four to eight pounds heavier, and about 30 per cent. stronger. In 1880, Dr. Sargent reports, only 50 per cent. of the Harvard students would have surpassed the height and weight of the army average, while to-day 65 per cent. are superior to that standard. This, he says, "is a most remarkable uplift in growth and development for any considerable body of men in any country or community to have attained in twenty-five years"; though he admits that if all the students were measured, instead of the 60 or 65 per cent. who come under his observation, there might be a change in the average height and weight. Even with this limitation, no one will dispute the wonderful improvement in the health and physique of the average college community, whether of girls or young men. It is plain to every observer that students, as a whole, like the bulk of the American people, take better care of themselves than they did twenty-five years ago, and understand better the needs and capacity of the human machine. Yet Dr. Sargent is not content with this remarkable showing; he is so impressed by the fact that the physique of all the scholarship men of to-day is below that of the average student, that he wishes the university to establish a certain standard of physical work, to be reached by the scholar before he can receive his degree. The deficient students he divides into two classes: those who take honors merely and come from the more prosperous homes, and those who stand high and receive stipends. The physical state of the latter is particularly distressing to Dr. Sargent, for it is not only below that of the average of to-day, but also that of 1880. Hence the desire for some kind of stimulus which shall compel the hard-working "grind" to devote a part of his time to physical development. It is, of course, no new idea that a certain amount of gymnasium exercise should be included in a college course. But at Harvard, with its thoroughgoing application of the elective system, such a requirement would seem hardly practicable. The best stimulus, as a matter of fact, is the growing knowledge that a weak physique is the worst possible equipment for the true scholar.

So many of our American families of wealth buy large portrait galleries of alleged ancestors, and are so careful to conceal the humble employments of the founders of their fortunes, that it is a genuine surprise when the truth is actually gloried in. Clarence H. Mackay, whose gift of a statue of his father to the University of Nevada was unveiled last week, has chosen to have him portrayed in the garb of the miner, pick in hand, and wearing the familiar high boots of the pioneer. It was thus that the elder Mackay made his beginning, and it was infinitely better that he should be pictured thus than in the dress of the board-room, of the dinner party, or the yacht, or in the "frock coat of statesmanship." That such men of vigorous personality, whatever their origin, can rise, remains the greatest glory of the Republic; and no memorial could better stimulate the Western students who are to enter the Nevada School of Mines. It is pleasant to add that the artist, Gutzon Borglum, has made the most of this uncommon opportunity.

By the way he received Dr. Hill at Berlin, the Kaiser showed that if impulsive men are likely to rush into mistakes, they often know how to make up for them graciously. In order to greet our new Ambassador, the Emperor broke up a vacation day at Potsdam and also disregarded the precedent that a foreign ambassador shall be in residence at least a week before he is received in audience. Dr. Hill had been in Berlin only three days, from which the amateur statisticians and expert gaugers of court favor may figure out how much more than ordinarily acceptable Mr. Tower's successor is. Every one in Berlin, of course, is now bound to make amends for the few unpleasant weeks that followed the announcement of Dr. Hill's appointment, and it may well be that in the end the affair will redound to his profit. What will be remembered is that Ambassador Hill was charged with not being enormously rich, and if there are circles at Berlin where such a disqualification counts heavily, there must be other sections of German society to whom the appointment of an ambassador in accordance with our old tradition of scholar-diplomats will not fail to appeal. We venture to say that even where the Junker rages, ability counts; and Dr. Hill will find in the relations between Germany and this country and the general European situation no lack of opportunity for showing his mettle.

The vigorous press law for which most Englishmen in India have been calling has at last been sanctioned by the Viceroy's Council, and, joined with it, comes an anti-explosives law, directed against open outrage and violence. Alarm grows sharp in India when the hitherto inoffensive Bengali takes to wielding the weapon of the Russian revolutionary and the Spanish anarchist. In the Punjab, too, till recently the supposed seat of loyalty to the British rule, the infection of unrest is spreading. Wherefore the old contempt for the weak-stomached native of Bengal is giving way to something of fear. So long as the Babu confined himself to oratory and boycott he was a nuisance. When sedition grew hot in the press, and school strikes were followed by public demonstrations, the native movement became something more of a nuisance. Still, the idea of an actual uprising against British rule was too preposterous to be connected with Bengal. But the bomb, though in the hand of the unwarlike Babu, is a very concrete danger. Terrorism is difficult to combat where the sympathy of a large element of the people is with the terrorists. And the position of the English in India, lost in a vast native population, may be harder in this respect than even that of the Russian government. There is this great difference, however, that England, while ready to make use of the mailed hand when necessary, is not as a rule stupid enough to find content in repression. Under British rule, vindicated authority is most often followed by a surrender of authority to demands that are reasonable and just.

Persia continues to exhibit the characteristic symptoms of a nation passing from an old order into a new. There is this remarkable exception, however, that the transformation from an Oriental despotism into a Constitutional state has been attended by comparatively little fighting and a minimum of bloodshed. The people of Persia must be either models of self-restraint or of native gentleness. For nearly two years there has been increasing ferment. A Constitution granted by one Shah has been ratified by his successor (who in secret has plotted against it), and, in spite of the utter inexperience of the new Parliament chosen to work it, has succeeded in maintaining itself unimpaired. The new Parliament has had to deal with an empty treasury, a treacherous sovereign, revolt, and disorders in the provinces, and with foreign aggression on the northern frontier, where Russia and Turkey have already fixed their teeth into delectable slices of Persian territory. Here is a rough parallel to conditions in France at the beginning of the great Revolution. And, if other points of similarity are wanted, we have various uncles and brothers of the Sultan trying to play the Philippe Égalité to the Louis XVI. of Mohammed Ali Shah, a patriotic priesthood taking the lead in the work of national reconstruction, and a fondness for fêting and otherwise celebrating Constitutional triumphs that are by no means secure. But of Bastille stormings, attacks on the Tuileries, and September massacres, Teheran has not tasted. The French of Asia seem to have all the progressiveness of their European models, without their liability to sudden excess.

PINING FOR TARIFF REVISION

At the first glance, nothing could well be more comic, or impudent, than the present assertion of the Republican party that it is bursting with desire to reduce the tariff. It now comes forward as the "original tariff-reformer." Burning with eagerness to set its hand to the work of cutting away the duties behind which monopolies take shelter, it informs the voters that all it needs is another lease of power from them in order to undo every tariff iniquity. This is to be the view of the Chicago platform. It will be the burden of Republican campaign speeches. Even a man so steeped in the gall of protection bitterness as Chairman Payne, declares:

> As surely as the next Administration is Republican, the preparation of a tariff-revision bill will be undertaken by the Committee on Ways and Means very soon after the election.

Thus we have the urgent and even pathetic appeal of a great party to the country: "For Heaven's sake, back us up in our determination to do what we have been desperately longing to do for many years."

The puzzled voter may be pardoned for scratching his head and asking: "Why have you waited until now?" Not for lack of power; the party has been in full control of all branches of the government for twelve years, with the Dingley tariff growing all the while more out of date and offensive. Neither has it been for lack of promises. The tariff was going to be "revised by its friends" in 1900, and again in 1904; but not one faithful wound of a friend has been dealt it. President Roosevelt was resolved to send in a special tariff message in December, 1904; but the tariff's friends, or the people's enemies, managed to frighten him out of that determination, which was, like all his, firm and irrevocable. Two years ago, Secretary Taft declared that the duty of reducing the tariff was "immediate." What has hindered a puissant party from doing the very thing it has so passionately desired to do?

We cannot tell; we simply record the mystery. There are those who will say that this inability of the Republican party to have its way with the tariff is more than mysterious; that it is suspicious. We know that Republicans are now most eager to cut down the Dingley duties, for they solemnly asseverate that they are; yet even in the act, one can but discern that in the very torrent, tempest, and whirlwind of their passion to revise the tariff, there is a certain temperance. There is eagerness, but it is strictly limited. Thus we have the semi-official declaration from Washington in the *Tribune:*

> If the turn of the political wheel should elect a Democratic majority in the House this autumn, there will be no tariff revision next year. This announcement will be made with considerable emphasis, for on the face of the proposition it may be seen that no revision could be brought about by a Senate and House divided on the great issues involved. Therefore, the voters of the country will be informed that if they want changes in the present tariff schedules they had better see to it that the Republican party be retained in power, both in the executive and legislative branches of the government. The Republican leaders will not hold out hope of tariff revision on any other terms.

This seems passing strange, my masters. If there is a Democratic House, it will certainly be a revisionist House. Hence it ought to be all the easier to get the work done. A Republican President has welcomed Democratic assistance in fighting for a big navy, and other measures near his heart; why not in getting rid of tariff enormities? Is he that is with me, really against me? The way the thing is put makes it appear that it is a tariff revision only as a campaign issue, and not as an object desired for itself, that the Republican party is thinking of.

And the question arises whether, in so bluntly stating the plan, the Republican managers are not much less astute politically than they imagine themselves to be. Is it wholly discreet for them to betray the fact that they count upon controlling the Senate in any event, and that a Democratic House will be powerless against it? One of their great arguments against Bryan is to be the peril to the country of unsettling legislation. But here they are admitting that they possess in the Senate an insurmountable barrier to anything of that kind. If the Senate can block Democratic tariff revision, it can block any other kind of Democratic mischief. Hence it would seem that, in their method of wheedling the voters into electing a Republican House, the party is disabling itself from terrifying the country with the possibility of Bryan.

In a large way, however, this sudden pining of the Republican party for tariff revision is to be looked upon as something much more significant than mere campaign tactics. Republican capacity to learn from the enemy is marked Especially under President Roosevelt. the party has seemed to take as its recipe for success: "Denounce the Democrats for favoring policies inimical to the welfare of the country, and then when you have got into office, quietly adopt those policies yourself." Accordingly, it would not be a departure from good precedent if the Republicans really undertook to steal the livery of Democracy to *dis*-serve the tariff in. It seems to have become clear to the party leaders that they have to do with a settled discontent, even among Republicans, over the class legislation of the Dingley tariff, and with a widespread movement to do away with as much of that injustice as possible. Life-long tariff-reformers will not, at any rate, be so inconsistent as the Republicans in refusing to accept a revision of the tariff from any hands but their own. If the Republican party does its belated duty, we will cheerfully receive that payment on account, and ask for the rest. And if it should prove to be the case that the Republicans should win through taking up the reform of the tariff, that fact would only emphasize afresh Democratic stupidity in abandoning all these years their one triumphant issue.

THE DESPISED MORAL ISSUE.

As usual, personality leaps to the front in the comment upon the extraordinary fight which was crowned with dazzling success at Albany last week. The first questions men ask are: "Who fought? Who won? Who gets the glory?" We come out of the struggle with a new hero and a new leader. The country is ringing with the name of a man previously unknown. Again the path of duty has been the path of glory. One of those immigrants who are ruining the United States by lowering our moral standards, Senator Foelker has shown a stern fidelity which a Puritan might envy, and a devotion which a Cavalier would know how to admire. People are saying that he may now have "anything he wants." He appears to be a man who wants the approval of his own conscience more than anything else; and he has set an example, and won a fame, which are at once a political inspiration and of a price above any possible political reward.

As for Gov. Hughes, who takes his great triumph so simply, he has impressed anew his fine qualities upon the nation. Such a capacity as his for moral leadership in public life has not been displayed for many a year. Every one concedes that, but for him, the intrenched race-track gamblers could not have been dislodged. And even his enemies admit that he led his fight with consummate ability, with perfect temper, and fought no man unfairly. As is said by the New York *Sun*, which has not supported Gov. Hughes nor warmed to the anti-gambling fight, he "offered no rewards for compliance and uttered no threats of Executive retaliation." The *Sun* adds a tribute to his "remarkable patience, uncommon vigor, genuine faith in his cause, and magnificent perseverance."

The time has been when the Republican party would have jumped at the chance to get such a man to lead it in a Presidential campaign. But it is jumping at command in another direction this year. Because Mr. Roosevelt had a personal dislike of Gov. Hughes, it was necessary for the party to look elsewhere for a candidate. And in all this long and dubious contest, wherein the moral forces of New York were banded together as never before and calling anxiously for recruits, not one word of sympathy or encouragement came from the State's most eminent citizen. The Oyster Bay Republican Senator voted against the Governor. The President was prevented from giving any aid by a sudden scruple about his Constitutional limitations! Now that the fight is won, Gov. Hughes is entitled to say to the great moral warrior of the age: "Hang yourself, brave Crillon! We have had glorious fighting, and you were not there!"

Principles, however, overshadow even personalities, and are really more instructive to one who will closely attend. Senator Foelker may cease to be talked of; Mr. Hughes may come back to his law office (though he cannot fail to remain one of our chief national assets); but the great political teaching of this wonderful campaign will abide. It is that there is no force so potent in politics as a moral issue. Politicians may scorn it, ambitious men may despise it or fight shy of it, newspapers may caricature or misrepresent it; but it has a way of confounding the plans of those who pride themselves on their astuteness, and rendering powerless the most formidable enginery of party or boss. This was the secret of Gov. Hughes's strength in his single-handed contest. He flung himself boldly upon the moral sentiment of the State. He was able to pierce to the popular conscience. His own unselfishness being transparent as the day, his refusal to wage anything but an open and honorable warfare being absolute and unquestioned, his steady insistence upon the fundamental morality of his cause was what swung the State to him, and compelled the Legislature to bow before a greater power than itself.

The occasional winning of such moral victories in public life is as bracing as a breath from the north in summer. It helps to keep alive the belief in the sound instincts and the sure progress of democracy. The philosophic Italian writer, Guglielmo Ferrero, has recently been pointing out the contradictory ideas about progress in civilization. He makes the point that if modern nations are not to be driven to ennui or decadence by the very success of a material civilization, they must have the tonic of struggle for moral improvement. It is, therefore, both reassuring and heartening when a man can go as Gov. Hughes has done before a great democratic community, with a single and naked question of morality, and get such an overwhelming response. He has uncovered a political power of which the professional manipulators of elections and legislatures are ignorant. But, then, it is an old reproach against politicians that they do not know their own trade. In the midst of their sneers at a moral issue and at "Charles the Evangelist," they found themselves swept away by a mighty force which they had no means of either measuring or resisting.

STANFORD AS A GRADUATE SCHOOL

President Jordan of Stanford University, in his last annual report, urges the abolition of the undergraduate college. His views on this subject have been briefly outlined in the press dispatches, but the complete report, just received, presents his case more fully. Thus far Stanford has been chiefly a large college; "its university work, though not extensive, has justly commanded respect." He then asks whether Stanford is to be a college or a university, or a compound of both; and he answers that in his judgment, "the last cannot be a permanent condition in any of our large institutions." He thus sums up his case:

> Collegiate instruction is relatively cheap. It is given well in upwards of two hundred institutions in America, and more or less badly in as many more. University work on a large scale is expensive. If properly undertaken, it is the choice privilege of the few institutions that are generously endowed or that are the educational pride of wealthy States. Among these Stanford University must stand. Its great endowment was given for that purpose, and its freedom from outside control enables it to undertake lines of work and long-continued series of investigations, efforts of the highest intellectual type, which would not find support in public institutions with their natural tendency towards the demand for immediate results.

As a step toward the desired end, he proposes, within the next five years, to add two years to the entrance requirements—that is, to take only students who have completed the work of freshmen and sophomores and who are presumably ready for the advanced work that is proper to a university. He would then give the bachelor's degree in two years.

The experiment, if tried, will be extremely interesting. University study in this country—that is, our professional and graduate schools—has in general been an outgrowth of the college. The graduate school was begun as a sort of continuation of the undergraduate course. Schools of law, medicine, engineering, and theology have sprung up beside the college, and often the requirements for entrance have been as low as those for college, or even lower. Indeed, some engineering schools have taken boys who are younger and more poorly trained than the average entering freshman. Even to-day it is only the stronger schools of law, medicine, and theology that demand for admission a full college course or its equivalent. The two notable attempts to establish independent graduate work in this country have been Johns Hopkins and Clark; but both institutions have found it desirable to organize also an undergraduate college. One reason is that the university needs a feeder. A man who has gone through the regular course, say, at Harvard, Yale, or Columbia, is likely to stay there for graduate work. He knows the teachers; he has formed social ties; the studies he has already pursued articulate closely with those which are to follow. The independent graduate school must therefore offer extraordinarily attractive courses, it must have the ablest professors, the best of libraries and laboratories, and the largest resources if it is to compete with the graduate schools which rest on a college.

And here arises a difficult problem of administration. Graduate work, as President Jordan says, is costly. A single highly paid professor may conduct only two or three classes with a pupil or two in each. In Harvard, Yale, Columbia, and Cornell, on the other hand, many of the professors devote at least part of their time to undergraduate classes—some of them largely attended. Moreover, the advanced courses are often open to qualified juniors and seniors, as well as to students who have already received degrees. Thus the basis of financial support for a course is much broadened. Indeed, it is not unfair to say that a considerable portion of the graduate instruction in the universities we have just mentioned, and in many others also, is a comparatively inexpensive by-product of undergraduate instruction. An enormous endowment, then, is necessary if an independent graduate school is to offer anything like the facilities which an undergraduate and a graduate school combined may command. On this point President Pritchett of the Carnegie Foundation—whom President Jordan quotes—said in his second annual report:

> Whatever may be the advantages of the combination of the college and the university into one organization, I am convinced that it would be of immense value to the educational system of the country if a few strong universities could be established, with generous facilities for social intercourse, but without undergraduate colleges. Such institutions would, if properly endowed and supported, constitute an independent influence in the formation of university standards which could not fail to benefit all universities alike. It is to be regretted that some of the newly founded institutions did not forego the prestige of an undergraduate college for the sake of this leadership.

This leadership is what Stanford is now to attempt. Neither the Johns Hopkins nor Clark has had enough money to equip thoroughly all its graduate departments and secure the most competent teachers and investigators. Each could use to advantage several million dollars more. In certain lines, then, neither of these universities can offer advantages that are indubitably superior to those elsewhere; and in other branches the Ph.D. of Johns Hopkins or Clark may mean less than a similar degree from Harvard or Columbia. The man who wants the very best, then, does not always have to go to either of the universities which profess graduate work as their specialty. But Stanford—as soon as San Francisco and the State of California have fairly recovered themselves—will have the interest on twenty-five or thirty millions. Its site is by no means ideal for graduate work. Students may be disinclined to spend their first two years at one college and then break off to attend Stanford. But if, in spite of these drawbacks, Stanford, with its vast wealth devoted solely to advanced work, cannot build up a great graduate school, then, for at least a generation, the attempt will probably be given up as hopeless.

CRIME IN ENGLAND.

The criminal statistics for England and Wales for the year 1906 have lately appeared. The volume is of unusual interest because it completes a half century since the annual returns of trials at assizes and quarter sessions were superseded in 1857 by more complete statistics of crimes and offences and criminal proceedings. The commissioners have regarded it as a suitable occasion for reviewing the movement of crime since 1857. Owing to extensive changes in criminal law included in the Consolidation Acts of 1861, exact comparison with the figures of 1857 is not always possible, but a brief retrospect is given and is full of interest.

The number of persons tried for indictable offences in 1906 (59,079) very closely approximates the figures of 1857 (54,667). It appears that the number of thefts for 1906 is almost the same as in 1857. But in fifty years the population has increased from nineteen and a quarter millions to thirty-four and a half millions. In proportion to the population, thefts have therefore diminished about 40 per cent. Offences against the person show no marked tendency to increase. There are positive indications of a great decrease in highway robbery. The figures in 1857 were 625, as against 209 in 1906. There is less opportunity for Dick Turpin to follow his profession to-day than in the old times when footpads were numerous; but satisfaction at this change is somewhat chilled by noting that the offences of burglary and housebreaking are increasing. In 1857 the figures were 1,644; in 1906 they were 3,174. The commissioners attribute a part of this apparent increase to the shorter sentences customary in 1906 as compared with 1857. This raises the question whether professional thieves belonging to this class do not need some more effective treatment than the short sentence. An habitual criminal law providing for the prolonged confinement of professional criminals might materially alter the figures. Arson has practically been stationary, as has also forgery. Prosecutions for riot, common fifty years ago, are now comparatively rare—138 in 1857, and only 26 in 1906.

A social and penological indication of marked importance is seen in the great increase in the number of prosecutions for attempts to commit suicide. There has been a continuous increase from 18 in 1861, to 298 in 1906. Here is ground for investigation as to the reason for the increased number of suicides, and as to the causes, such as intemperance. The question arises also whether the cataloguing of suicide as a crime and the punishment of attempts at suicide by imprisonment are rational ways of dealing with such cases. Of the number prosecuted in England last year for attempted suicide, 78 were committed to prison. Under the code of New York, suicide is also defined as a crime, and the makers of the code felt obliged to explain the reason that no penalty is attached to it:

> Although suicide is deemed a grave public wrong, yet from the impossibility of reaching the successful perpetrator no forfeiture is imposed.

Attempted suicide in New York is ranked as a felony punishable by imprisonment in the State Prison not exceeding two years or by a fine not exceeding $1,000, or both. While this offence is still catalogued as a crime in the code, the commitment of persons to prison for attempts upon their own life has been practically abandoned in New York; and, so far as we know, the fear of imprisonment has no deterrent effect upon this class of offenders. Its natural influence might be to cause the person contemplating suicide to take even greater pains to make the attempt a success.

While there has been a gratifying decrease of crime in England, the tables of non-indictable offences of a less serious character have grown from 215,787 in 1857 to 618,714 in 1906. Many of these are due to the contravention of police regulations. There has been a large increase, however, in commitments for drunkenness: 75,859 persons in 1857, and 211,493 in 1906. When we ask what are the causes of this changing phase of crime and the general reduction of crimes against property, it must be ascribed not to drastic laws or a severe penal system, but to the development of educational and preventive work. It is evident, on the other hand, that no penal system has corrected, or will be likely to correct, those forms of crime which are directly due to intemperance; hence it is not surprising that English statesmen are turning their attention to measures for regulating and reducing the liquor traffic.

GASTON BOISSIER.

A lecturer in a German university once remarked, with a certain pride, that no teacher in the institutions of his country bore such a title as *professeur de l'éloquence latine;* a professor of classical philology roamed too wide a field to be thus circumscribed. Truly the ideal scholar should have interests both deep and comprehensive—but titles sometimes are misleading. The great Frenchman whose death on June 10 is deplored by scholars of every sect, professed the mere title of *l'éloquence latine,* but he revived in his teaching and his written works all that *eloquentia* meant to Cicero, to Quintilian, to Petrarch and the Renaissance.

Gaston Boissier was born in 1823 at Nîmes, in the Provence, a delightful region, almost as Roman, with its ancient remains, as Italy itself, yet with an atmosphere in which Italian mellowness is infused with the clearer and subtler spirit of France. Perhaps it was the constant sight of the Maison Carrée and the Roman amphitheatre of his native town that turned the attention of the youthful Boissier to archæology. Archæology, certainly, in its most significant aspect—the imaginative reconstruction of the past—was a dominant interest throughout his career. His earliest publications were on literary themes, but on such themes as involve a new creation of lost material; he discussed in his Latin dissertation for the doctorate, the manner in which Plautus translated Greek plays—plays no longer extant; he wrote on the poet Attius and the Roman tragedy of the republic—tragedy that has come down to us in scattered fragments; he essayed a task that has fascinated many—the reconstruction of the life and writings of the erudite Varro; he argued that Seneca's plays could not have been written for the stage. Of these works, the earliest appeared in 1857, and the latest in 1861; during part of this time, and before, he had been professor of rhetoric at Angoulême and Nîmes.

But Boissier was attracted by the actualities as well as the possibilities of antiquity. Appointed in 1861 to the chair of Latin eloquence at the Collège de France, he began appropriately with a course on the times of Cicero. In a brilliant lecture of introduction, he implies that the study of history means to him the study of personalities; Cicero and his friends are to furnish the clue to the movements of the age. To these personalities he devoted special essays, later to be combined into one of his most popular and delightful books. A passing reference to Saint-Simon and a comparison of Cicero and Mme. de Sévigné are prophetic, too, of further works to come; there is hardly a paragraph of the brief lecture which did not later develop into some fuller treatment. To Boissier's hearers, his theme, so eloquently presented, must have thrilled with an almost contemporary interest, for France had passed from an age of Republican revolution to one of Imperialism. The lecturer gives this element of modernity just enough prominence, and protests against the abuse of it:

> Ces illustres morts nous sembleront mériter mieux que de servir d'instruments aux querelles qui nous divisent. et nous respecterons assez leur mémoire et leur repos pour ne pas les traîner dans l'arène de nos discussions journalières. Nous n'ou-

> blierons jamais que c'est outrager l'histoire que de la mettre au service des intérêts changeants des partis, et qu'elle doit être, suivant la belle expression de Thucydide, une œuvre faite pour éternité, κτῆμα ἐς ἀεί.

These words might be pondered by those who would save classical studies for our age by connecting them with modern occurrences or modern literature. A teacher who makes Horace dull will not enliven him by humbling Milton's strains for accompaniment; a teacher like Boissier, though concerned at many points with the relations of the classics to modernity, interprets absolute values which make their direct appeal.

That a professor of Latin eloquence would interpret his subject broadly is shown by Boissier's appointment in 1865 as *maître de conférences* at the École Normale to succeed Sainte-Beuve in the course on Latin poetry. Latin poetry, too, is a restricted subject, but as yet the fame of Sainte-Beuve has nothing to fear from what professors of classical philology have achieved in universal criticism. Eleven years later, Boissier was elected to the French Academy, in the place of M. Patin. In the interval there had appeared, besides his studies of Cicero and his friends, a noble group of essays, published in the *Revue des Deux Mondes,* which develop the various interests conspicuous at the beginning of his career. His archæological tendencies now result in a discussion of the progress of archæology and in a sketch of ancient life in Pompeii; based on sober fact, this brilliant portrait makes the pages of Bulwer and Sienkiewicz seem tawdry and dull. The publication of Le Blant's "Inscriptions chrétiennes de la Gaule" suggested an interpretation of this new material; the appearance of those important works, the "Histoire poétique de Charlemagne," by Gaston Paris, and "Les Épopées françaises," by Léon Gautier, inspired one of the most penetrating and universal of all his writings, an essay on recent theories of the epic. A series of papers treated of Roman society under the Empire, and there followed in 1874 a more profound study of the Roman spirit in the two volumes on "La Religion romaine," in which the treatment is by no means confined to religion, but includes among other things an appreciation of Virgil and of Seneca, quite as important for the literary criticism of these authors. Finally there had appeared a work which includes and supplements his earlier studies on Roman society, and is significant likewise for the history of philosophy and for literary history—"L' Opposition sous les Césars." Varied interests, searching analysis, profound generalizations characterize these writings; they show the universal outlook, a spirit of placid Horatian urbanity, a sprightly wit. Their author was justly selected as successor to Patin and Sainte-Beuve.

Two of these essays, not so much before the public to-day as Boissier's larger works, give more definite expression than these do to those ultimate principles which guided him as author and as critic. The essay on the progress of archæology and that on the theory of epic are really documents of literary criticism; they present different aspects of the same problem and hold an important relation to ideas current at that time and at this. The first gives small comfort to those who regard a proper contempt for science as a part of the humanist's outfit. Boissier is intensely interested not only in the great scientific advances of the last century, but in the minutiæ of philology, which he regards as material for the enrichment of appreciation. A doctor's dissertation restricted to Roman door-knobs or the inscriptions on lead *tesseræ* would have aroused in him, not gentle laughter, but sincere respect, if the task were well performed. In fact, in discussing the progress of epigraphy, he speaks of "Mêmes ces balles de plomb des soldats sur lesquelles on inscrivait des plaisanteries," and remarks: "Que des choses n'y trouvons nous pas dont les historiens n'ont pas parlé, et qui nous rendent l'histoire plus vivante." Nor did he indulge in easy vituperation of whatever goes on *au-delà du Rhin*; it is not as a jest that he tells of Ritschl's course on Latin grammar which finished part of the alphabet—it is to commend the intellectual curiosity of the two hundred students who attended such a course. In brief, he criticises French scholarship for its lack of minute analysis; he prophesies for it a great career in case French clarity assimilate German science—a prophecy which his inspiration has helped largely to fulfil. For him, Latin eloquence and classical philology are, it would seem, synonymous terms:

> C'est abandonner l'antiquité que de se contenter de la connaître à peu près et seulement par ses côtés littéraires. Les sociétés et les littératures anciennes ne redeviennent vivantes pour nous que lorsqu'on descend au détail, et cette prétendue critique qui s'amuse à discuter à propos des auteurs, qui, après un examen superficiel, fabrique des théories, qui recherche partout les idées générales afin de se dispenser d'avoir des idées précises, est la mort des véritables études.

This wholesome regard for science, and its incorporation in something larger, might not prepare Boissier's readers for the views on literary criticism expressed in his essay on the epic. He recognized the value of the modern schools; like his favorite Saint-Simon, he found it "bon d'avoir le nez tourné à l'avenir." The results of historical and philological criticism he welcomed, but in a period dominated by the influence of Taine, he rejected the doctrine which "prétend juger l'homme et ses productions comme on classe les plantes en botanique, comme on décompose les corps en chimie." In an earlier essay, contrasting the moral revolution effected by Christianity with the insignificant poetry which at first accompanied its triumph, he concluded that we are ignorant of the causes that produce great men and bring on the great ages; in the matter of literary inspiration, the wind bloweth where it listeth. He pleads for a large and flexible appreciation, capable of understanding all countries and all times, epochs civilized and epochs primitive. His discussion of the epic is a model of this very sympathy and discrimination. Unlike the pseudo-classicist, he recognizes in the Middle Ages something more than the playground of Goths and Huns; unlike the pseudo-romanticist, he refuses to call Virgil's epic artificial; he expends genial satire on Mommsen's criticism of Latin poetry, though in his former essay he had given this scholar the highest praise as scientist and historian. The ideas suggested in this paper on the epic still deserve the attention of writers on two baffling themes—the authenticity of the Homeric poems, and the nature of popular poetry.

Of further honors bestowed on Boissier, it is necessary to mention only his election to the Académie des Inscriptions in 1886, and his appointment as perpetual secretary of the Académie Française in 1895. As to his writings, one could almost predict, from what he had done, the volumes on Mme. de Sévigné (1888), and Saint-Simon (1892). Archæology appears again—and more than archæology—in his "Promenades" through Rome and Pompeii and the country of Horace and Virgil, and in his "L'Afrique romaine" (1895). His interest in both Roman religion and the origins of Christianity finds expression in the splendid volumes on "La Fin du paganisme" (1891), which have inspired admirable works by French scholars in the same field. Finally, he published a volume on Tacitus (1903), and one on "La Conjuration de Catilina" (1905). The surpassing importance of these works for the student of antiquity and for the modern historian has already received attention in these columns. It is interesting that, in his last book, he should return to the subject with which he began his course on *l'éloquence latine.*

I have pointed to two distinct classes in Boissier's works, one archæological in spirit, devoted to the reconstruction of what no longer exists; one interpretative, devoted to accessible records. There is no absolute cleavage between the two. His reconstructions proceed carefully on the basis of the known; his interpretations do not end with what is before us; they reconstruct personalities and ideals—Cicero and his friends, Tacitus and the method of the ancient historian. Both undertakings are of the highest order. They depend on a quality without which classical studies or any other studies are dead—the creative imagination. Boissier modestly said of his Catiline that it contained nothing new; so there is nothing new in the chemical ingredients from which a new substance is formed. E. K. RAND.

Cambridge, Mass.

NEWS FOR BIBLIOPHILES.

It is well known that American editions of several of Thackeray's books were published prior to the recognized first English editions. Some were collections of magazine contributions issued with the authority of their author, but many were pirated or unauthorized. To a less extent the same thing is true of Dickens. Two pamphlets of this character not included in any of the published bibliographies of Dickens have recently turned up. The first has the title:

> Public Life of Mr. Tulrumble, Once Mayor of Mudfog, and Oliver Twist; or, The Paris Boy's Progress. By "Boz," Sold by all the Principal Booksellers. New-York 1837.

This contains 52 pages, measuring 6⅛ by 3¾ inches, in pink paper covers. Of the two sketches mentioned on the title, the first, "Public Life of Mr. Tulrumble," appeared in the first number of *Bentley's Miscellany*, January, 1837. The second, the first two chapters of Oliver Twist, appeared in *Bentley's* for February. No doubt, they were reprinted as soon as the February number of the magazine reached America. Chapters iii. and iv. appeared in the March number; but this pamphlet contains no mention of any continuation. When Oliver Twist was published in three volumes, 8vo, the next year, some alterations were made. The first sentence in the magazine and in this pamphlet begins: "Among other public buildings in the town of Mudfog," etc. In the first and later editions this is altered to "In a certain town which for many reasons it will be prudent to refrain from mentioning," etc.

The second of these pamphlets is entitled:

> Travelling Letters. Written on the Road. By Charles Dickens. New York: Wiley & Putnam, 161 Broadway. 1846.

This is a 12mo., consisting of title and 22 pages of text, bound in brown paper. The pamphlet is very thin, but the wrapper is lettered lengthwise "Dickens' Travelling Letters.—Part I." showing that when the cover was printed the intention was to make the volume much thicker. Dickens visited Italy in 1844 and 1845. On his return he contributed a series of articles to the *Daily News*, No. I. of which was issued under his editorship, January 21, 1846. These sketches continued irregularly through January, February, and March. Later in the year they were collected in book form as "Pictures from Italy." The three "Letters" included in this pamphlet appeared in the *Daily News* for January 21, 24, and 31. Together they fill pp. 1-37 of the first English edition. The date at the beginning of the narrative which is "eighteen hundred and forty-four" in the first edition, as it was in fact, is "eighteen hundred and forty-five" in this pamphlet. On the publication of the English edition Wiley and Putnam brought out an American edition, "Price 38 cents." It is not likely that more than this Part I. of these letters was ever published in this form.

Correspondence.

"VIRGINIANS" IN 1630.

To the Editor of The Nation:

Sir: In the "News for Bibliophiles," in the *Nation* of June 11, is described "a bibliographical curiosity" entitled "Pathomachia," published in 1630, and containing this passage: "Arrant Traytors, doe not the verie Virginians know that the Person of a King is sacred."

This is "a very early reference to Virginians," according to your bibliographer, who remarks: "It would be interesting to know what account of Virginia was in the memory of the writer when he made that reference." Your bibliographer is apparently under the impression that by "Virginians" the 1630 author meant the English colonists in Virginia, is disturbed at the contemptuous opinion of them seemingly entertained by the author, and wonders whence the opinion was derived. If this assumption is correct, it can be shown, I think, that your bibliographer's anxiety is misplaced. For by "the verie Virginians," the 1630 author meant not the English colonists in Virginia, but the *Indians* of Virginia. Just as, throughout the seventeenth century, by "an American" was always meant a native of America—that is, a North American Indian; so, too, prior to 1630, by "a Virginian" was always meant a native of Virginia—that is, an Indian. At least, no instance before 1630 is known to the present writer of the employment of the noun Virginian except in reference to an Indian. On the other hand, it can be shown that early in the seventeenth century the word "Virginians" was sometimes applied to the Indians of Virginia.

In his "Map of Virginia," published in 1612, Capt. John Smith headed a section "Of the manner of the Virginians government" (p. 34). These words were repeated in 1624 by Smith in his "Generall Historie of Virginia" (book II., p. 37), and were reprinted by Purchas in 1625 in his "Pilgrimes" IV., 1703). It should be added, in passing, that a chapter in W. Strachey's "Historie of Travaile into Virginia Britannia," written about 1612, is headed: "The manner of the Virginian government, their townes, their howses, dyett, fowling, and hunting, their gaming, musique, dauncing" (Hakluyt Society edition, p. 69). James Rosier's "Trve Relation" of Waymouth's voyage was first printed in 1605. Almost the last words were: "The names of the fiue Saluages which we brought home into England, which are all yet alive, are these" (Gorges Society edition, p. 160). When Rosier's Relation was reprinted by Purchas in his "Pilgrimes," some changes and additions—whether by Rosier or by Purchas, I do not know—were made at the end; and the above words were altered to "The Names of our *Virginians*" (IV., 1667). In 1606 George Percy wrote:

> At Port *Cotage* in our voyage vp the Riuer, we saw a Sauage Boy about the age of ten yeeres, which had a head of haire of a perfect yellow and a reasonable white skinne, which is a Miracle amongst all Saluages.

In the margin are the words, presumably written by Purchas, "Yellow haired *Virginian*" ("Pilgrimes," IV., 1689).

When was the noun Virginian first applied to an English colonist in Virginia? In a letter dated Saybrook, Connecticut, November 6, 1636, Lion Gardiner wrote to John Winthrop, jr.:

> I heare that the Bachelor is to bringe vs provision, I pray you forgett vs not when shee comes from the Bermudas with some potates, for heare hath beene some Virginians that hath taught vs to plant them after a nother way, and I have put it in practise, and found it good (Mass. Hist. Colls., Fourth Series, VII., 54).

Were these "Virginians" Indians or white men? If the latter, it is the earliest example of the noun in that sense known to the present writer. It is worth while to quote from a pamphlet printed in 1638. In his "Trve Relation," or history of the Pequot war, P. Vincent declared that "the long forbearance and too much lenity of the English towards the Virginian salvages, had like to have been the destruction of the whole plantation." A little later, speaking of the New Englanders, Vincent said:

> In a word, they have built fair towns of the land's own materials, and fair ships, too, some whereof are here to be seen on the Thames; they have overcome cold and hunger, are dispersed securely in their plantations sixty miles along the coast, and within the land also, along some small creeks and rivers, and are assured by their peace, by killing the barbarians, better than our English Virginians were by being killed by them" (Mass. Hist. Colls., Third Series, VI., 37, 42).

Here, then, as late as 1638, a writer has to use the qualifying adjective "English" to distinguish the English colonists in Virginia from the aborigines.

Can there be much doubt that the 1630 author, when he made the above reference, had in mind the account of Virginia published by the redoubtable Smith?

Albert Matthews.

Boston. June 12.

AUTHORS AND THEIR OWN BOOKS.

To the Editor of The Nation:

Sir: In an interesting article by Prof. Hiram Corson, entitled "A Few Reminiscences about Robert Browning," which recently appeared in the *Cornell Era*, the writer states that once, when visiting the English poet, he took the opportunity to ask about a certain passage in "The Ring and the Book." Browning's reply was: "I don't remember the passage. It has been some time since I read the poem, and I haven't a copy of it in my house!" As Professor Corson suggests, the poet probably gave away to his friends all "author copies" he received from his publishers, and so had none left for himself.

In this connection it may be interesting to recall a similar and perhaps even more striking confession on the part of Goethe. On his way from Weimar to Switzerland, Goethe stopped off at Frankfort to visit his mother and his old friends. From there he sent a letter to his friend, the physiologist Sömmerring, and under date of August 21, 1797, wrote: "And what will you say to it, if I ask you to purchase for me at Forster's auction, the older as well as the later edition of my collected works?" Goethe, after specifying the "reasonable figure" which Sömmerring's offer was not to exceed, then adds the most surprising statement: "I haven't had a copy of my works in the house for several years." Then, as if he felt it incumbent upon himself to justify his request for his own works, he explains: "I have a special reason for going through them again at this time." Such confessions as these would seem to contradict the notion which, as Goethe himself puts it, charges authors with "liking best to read their own works."

C. H. Ibershoff.

Cornell University, June 14.

THE ART-HISTORICAL EXHIBITION AT BRYN MAWR.

To the Editor of The Nation:

Sir: Every student of art who was able to visit the exhibition of photographs at Bryn Mawr, noticed in the *Nation* for June 4, must feel grateful to the private collectors who contributed generously to the success of the undertaking. The exhibition suggests the reflection that it should be the ambition of every earnest collector to see his art in its exact station and setting, and to this end to allow of the most exhaustive illustration and comparison. This is, of course, ideal; but a complete illustration of old masters in America in good photographs would much amaze us. It would also much instruct. For a very brave attempt at such illustration the Bryn Mawr authorities deserve high credit.

William Rankin.

Roselle Park, N. J., June 9.

Notes.

In the autumn we are to have a long work on "Charles Dickens and his Circle," by W. Teignmouth Shore.

Arthur Dasent believes that many letters from J. T. Delane were omitted in his recent biography, and requests that any such be sent to the publisher, John Murray, No. 50 Albemarle Street, London, for use in a second edition. The letters will, of course, be returned.

"Over against Green Peak," by Zephine Humphrey (Henry Holt & Co.) is a record of country life far above the average of its class in the qualities which go to make such a book enjoyable. Three women of New York, after unsatisfying experience in mere summer boarding, buy an old house with a bit of land in Dorset, Vt., and set up for themselves. It is a situation about which any amount of commonplace might easily be written, but the reader at once finds that he is not dealing with a commonplace mind. The author sees the things that are worth seeing, and she has a rather unusual command of simple, dignified, and effective English. She does not blink the difficulties of housekeeping in the country, caring for a horse, picking and marketing the produce of the little orchard, and other such tasks; but is perfectly willing to forego the city privileges and conveniences which must be purchased at the cost of light, space, and serenity, of mountains and sky and silence.

The Neale Publishing Company (New York and Washington) has projected a series of volumes under the general title of The Huntsman in the South, the first of which deals with Virginia and North Carolina, and comes from the pen of Alexander Hunter, author of "Johnny Reb and Billy Yank." The fox chase and the old-fashioned "coon-hunt" seem especially to waken the author's enthusiasm, though duck shooting naturally claims a large share of his attention. Mr. Hunter has much of interest to tell, especially in his reminiscences of the older South, but he is not imbued with the newer ideals of sportsmanship. His duck shooting stories are too often mere illustrations of the wasteful methods which threaten the total extinction of that sport, and can hardly please the discriminating reader. One who stops to consider can only be disgusted with such stories as that of the wealthy club member who spends two months on the club preserves entirely alone, and reports a record of eight hundred ducks slaughtered. The author speaks of two hundred and sixty canvasbacks in one day as the finest bag within his own knowledge. He should rather have said the most disgraceful. The man who slaughters in that style should have his records posted in the abattoirs of Armour or Cudahy, not published in the literature of gentleman's sports.

Dr. Emile Reich, author of "Foundations of Modern Europe, 1760-1871" (The Macmillan Co.) is not a well-equipped historian. For example, he believes that documents of a later date than 1760 at the British Record Office are, "as a rule, not fully accessible"; he may be interested to hear that even Foreign Office papers, the most jealously guarded of all, may be consulted without any difficulty, for more than half a century beyond this date. He tells us that the Czarina Elizabeth "sacrificed hundreds of thousands of men" to the belief that Prussia was the hereditary enemy of Russia; but the fact is that there was no hereditary enmity whatever at the time of the Seven Years' war, and that Russia had made no such sacrifices; further, it was Peter III., not Catherine, who was responsible for the change of policy that possibly saved Frederick the Great. She was more hostile to Frederick than her predecessor. But it is not only in detail that this work fails, but in larger generalizations, which might, if well founded, counterbalance some degree of inaccuracy in minor points. Of the revolutions of 1848, the most important and interesting, according to our author, was that of Hungary; for this opinion he advances a number of reasons, among which perhaps the most striking is that in Hungary "every peasant is eloquent." In preaching the sacred duty of war, Dr. Reich declares in sweeping fashion that when "we study the period of a nation that has for one motive or another kept peace, given up martial aggressiveness, in other words, acted up to the advice of the modern millionaire philanthropists, we invariably find that nation come to grief and ruin. Consider . . . Austro-Hungary. Since 1866 she has . . . abstained . . . from . . . wars . . . and has consequently suffered . . . a loss of real power, such as she never suffered in the times of her greatest defeats under Napoleon." Furthermore, it is impossible to establish any such comprehensive statement as that on page 99: "Marie Louise was the most flippant, the most sensual, and morally the weakest woman of her time." Nor (p. 111) that the war of 1812 between England and the United States was brought about "chiefly through the manœuvres of Napoleon." But enough has been said to demonstrate that Hungarian eloquence can never be a substitute for historical judgment and historical sense.

Two volumes, with a total of 745 pages, seem a good deal to devote to a woman whom Sainte-Beuve once sketched for us in thirty-five pages. But this "Princess of Intrigue," Geneviève de Bourbon, Duchesse de Longueville, so elaborately studied by H. Noel Williams (G. P. Putnam's Sons) was something more than a professional beauty of her time; she participated in all the great events of one of the most turbulent periods of the seventeenth century, and was at the very centre of its political, social, and literary life. Mazarin placed her among the three women capable both of "governing and upsetting three great kingdoms." The Princesse Palatine and the Duchesse de Chevreuse are the two others. Indeed, this conscientious but somewhat longdrawn biography is less a study of a single character than a picture of a whole period, the first part of the seventeenth century, from the declining years of Henry IV. to the spectacular accession of Louis XIV. The Thirty Years war, the negotiations of Munster, the government of Mazarin, the intrigues of the Fronde are part of this picture; there is not an important society, religious or literary, not a fashionable set, where Mme. de Longueville does not appear. She shines at the Hôtel de Rambouillet when it was at its height with Corneille and Voiture as protagonists; after her conversion from a life of dissipation to one of mortification she entrusts her soul partly to the care of the aristocratic Carmelite sisters, partly to the austere régime of Port Royal. By following her, we become acquainted with all the men and women who were then making history, among them La Rochefoucauld, Beaufort, Guise, Coligny, Turenne, and Mmes. de Sévigné, de Chevreuse, de Sablé, and de Montbazon. The author does more than mention these. To almost every one he devotes long digressions that somewhat break the thread of the narrative. As a history of French society this carefully prepared and richly illustrated work will be valuable to readers who have no access to the French material which the author has used freely.

"A Sister of Marie Antoinette," an account of the life of Maria Carolina, Queen of Naples, by (Mrs.) Catherine Mary Bearne (E. P. Dutton & Co.), is an energetic essay in book-making by main strength. The secondary sources have been ransacked and freely transcribed, no expense has been spared in the matter of illustrations, and a story full of intrinsic interest is told in a style of vivacious dulness, with a syntax of its own. The heroine herself is, in any presentation, a striking type of woman in politics. Her hatred and dread of Napoleon, the trouble she managed to give him, and her embarassment when she became his grandmother-in-law, form a dramatic theme which hardly needs the enlivenment furnished by her entanglement in the affairs of Nelson and Lady Hamilton. In her realm, as in that of Prince Otto, politics and love affairs were hardly distinguishable in method, in content, or in importance.

For more than half a century, between the years 1714 and 1771, Christopher Dock, a native of Germany, taught school among the Germans in what is now Montgomery County, Pennsylvania. In 1750, he was with difficulty persuaded to write a detailed explanation of his method of school management, which was published by Saur, the Germantown printer. Interesting in point of time, this, the earliest American book about school teaching, is remarkable for insight into human nature, for the admirable character which it revealed, and for its minute statement of an educational method which substituted the law of love for the rule of force, long before the change had been made in the school world. Dr. Martin G. Brumbaugh, formerly commissioner of education in Porto Rico, now superintendent of the Philadelphia schools, has collected and translated into English all of the writings of Christopher Dock, which, with a brief sketch of his life, illustrations showing some of his schoolroom furniture, and reproductions of his manuscripts, are published in one volume by J. B. Lippincott Company, Philadelphia, in an edition of 1,000 copies. An introductory note is supplied by ex-Gov. S. W. Pennypacker of Pennsylvania, who first made Christopher Dock known to the educational world with a translation of the "Schul-Ordnung" and an English version in the original metre of one of Dock's hymns.

An excessive modernity, including a style not infrequently verging upon the flippant, characterizes "Our Colonial Curriculum," the presentation of Colyer Meriwether's diligent research among the textbooks, educational histories, and schemes of study relating to some of the colonial colleges of America (Washington: Capital Publishing Company). Mr. Meriwether's exploration has been confined mostly to the colleges of New England and Virginia. Doubtless, as Mr. Meriwether argues, a large proportion of effort was wasted in educational directions in the past, as in every manifestation of energy, but is it quite certain that the educators of to-day, with their increased knowledge of nature, have overcome nature's method of doing much to produce a little? It should be said in Mr. Meriwether's behalf that in a paragraph now and then he modifies the force of his argument, and suggests that perhaps textbooks do not tell the whole story and that, may be, after all, the educational effort of the past was not entirely thrown away.

The Cambridge University Press (G. P. Putnam's Sons) has put out "Altera Colloquia Latina," adapted from Erasmus, with notes and a vocabulary, by G. M. Edwards. We have often wondered why these colloquies are not more used in American schools. They have a certain sparkle which carries the student on from day to day.

To those who wish to sip in condensed form that intoxicant known as the Wisdom of the East we recommend a series of slender booklets published under that title by E. P. Dutton & Co. Each volume contains the translation, in full or in part, of some famous book from Egypt, China, Japan, Judea, or Persia. The work is done by good scholars, and several at least of the introductions are of considerable interest. Earlier volumes included the wisdom of India.

John Lane Co. has a new edition, after thirty-eight years, of Frederika Macdonald's "Iliad of the East," with the illustrations by J. Lockwood Kipling, which will serve to renew interest in a clever and popular abridgement of the huge epic Rāmāyana. The book makes no pretensions to learning, and is professedly put together from Fauche's French version of the Sanskrit, yet, even after such a profession, it is fair to grumble a little at the careless use of diacritical marks in transliteration. Why should the poem be Ramayāna on the title page, Ramāyana in the introduction, and Rāmāyana (which is right) in the notes? However, the story's the thing, and the tale of Rāma and his bride, their forest wanderings, and the fight with Rāvana, is presented in a way to attract the hasty English reader. The introduction argues, successfully, we think, that modern sentiment is really in many ways closer to the romanticism of India than to that of the European middle ages.

The second half of Redhouse's translation of the "History of the Resuli Dynasty," by El-Khazreji, is edited for the trustees of the Gibb Memorial by E. G. Browne, R. A. Nicholson, and A. Rogers (Leyden: Brill; London: Luzac & Co.). This part, like the first, abounds in anecdotes illustrative of Moslem life in Yemen in the fourteenth century, a period otherwise little known. Exceptions have been taken to the translation as well as to the chief editor's choice of this particular work, and Mr. Browne here defends his action. Certainly if El-Khazreji's History is not the best work for the Gibb Memorial, it is nevertheless valuable; and if Redhouse's translation is not without faults, it yet gives the sense of the original fairly well. An index of proper names and other things is added.

Arabic scholars will welcome the publication of the Arabic text of Yaqut's "Dictionary of Learned Men," by the trustees of the Gibb Memorial, under the competent editorship of Prof. D. S. Margoliouth. The first volume, containing part of the letter Alif (the names are arranged in alphabetical order), is based on a single Bodleian manuscript, the only manuscript of this volume known to exist. For the correction of the text the editor has had to depend on works used by Yaqut or works that borrowed from him. The proofs were read in part by the late Sheikh Al-Yaziji G. Zaidan, and other well-known experts.

Dr. Israel Davidson's "Parody in Jewish Literature" (The Columbia University Press) is an extremely creditable bit of work. He has not only made an exhaustive study of the subject in all its ramifications, its beginnings in Talmudic literature, its development in the early middle ages, its alternate decline and revival in subsequent centuries to our day; but he has shown as well how attractive Hebrew writings may be from the literary point of view—a new line of inquiry to many. It will be a surprise to those who regard Hebrew as strictly a religious or theological study to learn, ,under Dr. Davidson's guidance, of the spread of the parody or burlesque from travesties of Talmud and Mishrah to caricatures of varying phases of Jewish thought and custom. Evidently there was an undercurrent of genial humor even in ages when residents of the Ghetto had little apparent cause for joyousness. The author devotes the first part of his work to the history of Jewish parody. In his second part he gives a detailed account of famous Jewish parodies. In addition, he publishes new texts of Provençal parodies. A full bibliography is given with a mass of critical notes.

President J. M. Thomas of Middlebury College, in his little book entitled "The Christian Faith and the Old Testament" (T. Y. Crowell & Co.),. raises once more the question of the value of the Old Testament to Christianity. The allegorical method of interpretation which made the Old Testament mean what it does not mean, and which put the Old and the New Testament on the same level of authority, has been superseded by the historical method. In this change of method, a change of values arises. The religious value of the Old Testament rests no longer in the words as such, but in the men of faith, whose progress in religion is recorded in that ancient literature. The accepted results of modern criticism and the sketch of the progress of religion from Deborah to Amos, are both admirably presented. Dr. Thomas will succeed, in our judgment, in stirring up in his readers the desire to study the Old Testament with intelligent appreciation.

In his "Cities of St. Paul" (A. C. Armstrong & Son), Sir William M. Ramsay states his latest opinions touching the cities of Eastern Asia Minor associated with the name of Paul—Tarsus, Antioch, Iconium, Derbe, and Lystra. The author directs the attention from Paul the theologian to Paul the philosopher, the one in whom "for the first time since Aristotle, Greek philosophy made a real step forward." In discussing the activity of Paul, Ramsay postulates a distinct philosophy of history, which is stated thus: (1) the divine alone is real; all else is error; (2) a society or a nation is progressive in so far as it hears the divine voice; all else is degeneration; (3) all men and every human society can hear the divine voice; but they must coöperate ere the communication can take place (p. 12, ff.). While Ramsay admits that Paul's view is not inconsistent with the best thought of the Hebrew prophets, he contends that such a view "could not have been thought out in the form which Paul gave it without a training in Greek philosophy." Readers who hold that Paul is more Jew than Greek, more prophet than philosopher, and who believe that Paul gets his world-view from Daniel and the Jewish apocalyptists and his broad-minded universalism from his religious experience of the divine power which he calls Christ or Spirit, will be stirred if not convinced by this important work. The book itself is well furnished with maps, plates, and cuts, but unfortunately has no index.

A short time ago, Dr. R. H. Charles published an English translation with full introduction and commentary of the interesting ethical document known as The Testaments of the Twelve Patriarchs, a document written in Hebrew about 100 B. C., but now existing, with Christian interpolations, in various translations—Greek, Armenian, and Slavonic. In the present volume ("The Greek Versions of the Testaments of the Twelve Patriarchs," Henry Frowde), which closely follows the former volume, the scholar has a Greek text which definitely supersedes that of Sinker, and a practically exhaustive *apparatus criticus* of all the versions. No student of the ethics of the New Testament can afford to neglect this inspiring voice from Late Judaism. A sentence or two from Charles's translation of the sixth chapter of Gad may be quoted to indicate the value of the Testaments:

> Love ye one another from the heart; and if a man sin against thee, speak peaceably to him, and in thy soul hold not guile; and if he repent and confess, forgive him. But if he deny it, do not get into a passion with him, lest catching the poison from thee he take to swearing, and so thou sin doubly. And though he deny it, and yet have a sense of shame when reproved, give over reproving him. For he who denieth may repent so as not again to wrong thee; yea, he may also honour thee, and be at peace with thee. But if he be shameless and persisteth in his wrongdoing, even so forgive him from the heart and leave to God the avenging.

The twelfth *Lieferung* of Prof. Morris Jastrow's "Die Religion Babyloniens und Assyriens" (Giessen: Alfred Töpelmann), containing part of Chapter xx., "Vorzeichen und Deutungslehre," corresponding to Chapter xix. of the original, brings this translation within sight of completion. There is to be one more part, to which will be added an excursus by Dr. Hüsing on the "Gods of Elam," a full bibliography and indexes. The author also promises a "Bildermappe," containing temple plans, representations of typical gods and demons, religious and mythological scenes from seal cylinders and votive objects, processions of the gods, sacrificial scenes, and the like. The complete translation, exclusive of the cosmology, etc. (that is, the last seven chapters of the original), which is reserved for separate treatment later, will be about twice as large as the original work, published ten years ago. The next step, apparently, will be the translation of this translation back into English.

"Philotesia: Paul Kleinert zum 70. Geburtstag dargebracht" (Berlin: Trowitsch & Sohn), is a collection of technical articles by associates and friends of Professor Kleinert of Berlin. Among the contributors are Adolf Harnack, Hermann Diels, Karl Holl, Paul Gennrich, Emil Kautzsch, Ernst Breest, Eduard Simons, Daniel von der Heydt, Emil Meyer, Eduard von der Goltz, Rudolf Frankh, Hans Kessler, Julius Kaftan, Karl Müller, Graf Baudissin, Carl Schmidt, Max Lenz, and Emil Seckel. The topics include Oriental, Jewish, and Greek religion, Christian antiquities, the Reformation, earlier Protestantism, and modern church problems. The many-sided character of Kleinert explains the exceptional range of topics.

As the twenty-first part of the well-known series, Porta Linguarum Orientalium (Berlin: Reuther & Reichard), Prof. C. Brockelmann of Königsberg will publish a "Kurze vergleichende Grammatik der semitischen Sprachen." This work is intended to take the place of Prof. H. Zimmern's "Grammatik," now out of print and not to be republished. The larger work of Dr. Brockelmann on the same subject, known as the "Grundriss," of which a part has been published, will soon be completed. It will contain in full the scientific processes, while the "Kurze Grammatik" will give the results in a manner especially adapted for students.

"Einsames Land: Erzählungen und Stimmungsbilder," by Dr. Wilhelm Münz (Frankfurt a. M.: J. Kauffmann), contains an orthodox Jewish rabbi's thoughts on the practical religious questions of the time.

"An des Daseins Grenzen: Geschichten und Phantasien," by Max Haushofer (Munich: C. H. Beck), is a posthumous collection of speculations on the problems of the great beyond by one who felt the presence of death and was endowed with an exceptionally brilliant imagination.

The fourth annual issue, for 1907, of A. Hortzschansky's "Bibliographie des Bibliotheks- und Buchwesens" (Leipzig: Harrassowitz) contains about 150 titles more than the issue for the previous year, in spite of the omission of not a few periodical bibliographies of special subjects. This omission would seem to be a mistake, especially if taken in connection with the enumeration of such fugitive material as annual reports and finding lists of American public libraries.

In "Luther, wie er lebte und wirkte," by Hugo L. Braune (Leipzig: M. Heinsius Nachfolger), the leading feature is the abundance of fine illustrations; the text is little more than an explanation of the pictures.

"Luther et le Luthéranisme," a work by the Catholic professor of theology in Moulins, Dr. L. Cristiani, is a criticism of the German reformer and his work. It appears with a preface by Dr. Baudrillart, rector of the Institut Catholique of Paris. Special chapters are devoted to "La Grossièreté de langage de Luther" and "Luther et le démon." (Paris: Bloud & Cie.)

To the student of contemporary history the book by Eug. Réveillaud, "La Séparation des églises et de l'état" (Paris: Fischbacher), offers a great variety of useful material somewhat loosely knit together but presented in an interesting fashion by a practised journalist and politician. The author, a member of the French Chamber, played a distinguished part in the debate on the Separation law. His book contains his own and many other speeches, with a running commentary on the debate. The first part gives an historical résumé of the relations between Church and State in France; the third part, the text of the laws of 1905 and 1907, with the ministerial circulars that their enforcement necessitated.

The Danish Academy of Sciences has published the "Anecdota Cartographica Septentrionalia," edited by Axel Anthon Bjornbo and Carl S. Petersen (32 folio pages of text with 11 charts, 3 colored). This is a collection of rare charts dating back to the fifteenth and sixteenth centuries. They are mostly maps of portions of Scandinavian lands, but the collection includes also a chart of North America, 1636, by Joris Carolus.

The present copyright law in Russia, which is based on governmental decrees of 1828, 1830, and 1857, is being thoroughly revised by the Duma. The new provisions aim chiefly at the protection of foreign authors, whose productions are translated into Russian. Authorship rights for foreigners are to extend over a period of fifty years.

The Société Préhistorique de France will hold its fourth annual congress at Chambéry (Savoy) the last week in August. Three days will be devoted to business meetings and visits to the museums, private collections, and monuments of Chambéry. The rest of the week will be spent in scientific excursions to Aix-les-Bains, the town and lake of Annecy, the lake of Bourget, which will be dredged for prehistoric relics, the lake of Aiguebelette, the sculptured rocks of Mont Cenis, and the Tarentaise valley. Among the topics discussed will be the "Age of the Lake-Dwellers," "The Relation between the Palæolithic Period in Savoy and Glacier Distribution," "The Neolithic Period in the Alps," and "Prehistoric Sculptured Rocks."

The International Historical Congress of the War of Independence and the Period (1807-1815) will take place at Saragossa October 14 to 20. According to present arrangements, it will be divided into six sections, as follows: (1) Political history of the Peninsula (1807-1815); (2) military history; (3) internal history; (4) relations with the history of foreign countries; (5) studies relating to the siege of Saragossa; (6) bibliography, memoirs, biography, correspondence, unedited material. All persons may take part by sending their address and fifteen pesetas to the president of the committee of organization, Bureau de l'Exposition Hispano-Française, Saragossa.

The Rev. George Edmands Merrill, president of Colgate University since 1899, died June 11. Born in Charlestown, Mass., in 1846, he was graduated from Harvard in 1869, and from the Newton Theological Institution in 1872. After holding pastorates in Baptist churches in Springfield, Mass.; Salem, Mass.; Colorado Springs, and Newton, Mass., he was called to Colgate. He was author of "The Story of the Manuscripts" (1881), "Crusaders and Captives" (1890), "The Reasonable Christ" (1893), and "The Parchments of the Faith" (1895). He also wrote on the Song of Solomon in the "American Commentary" on the Old Testament.

William Leete Stone, a voluminous writer on subjects in American local history, died in Mount Vernon June 11, at the age of seventy-three. After graduation from Brown in 1858, he was admitted to the bar, but he gave a large amount of his time to business and to writing. Among his books are "The Life and Times of Sir William Johnson," "Revolutionary Letters," "Pausch's Journal," "Burgoyne's Campaign and the St. Leger Expedition," "Life and Military Journals of Major-General Riedesel," "Letters and Journals of Mrs. Riedesel," "History of New York City," "Reminiscences of Saratoga and Ballston," "The Saratoga Battle Grounds," "Ballads of the Burgoyne Campaign," "Sir John Johnson's Orderly Book," "Historical Guide Book to Saratoga Springs and Vicinity," "The Starin Genealogy," "The Stone Genealogy," "Life of Governor George Clinton," and "Life of John Hay." He also contributed largely to Appleton's "Cyclopædia" and Appleton's "Cyclopædia of American Biography."

The Rev. George Clark Hutton, D.D., at one time joint-principal of the United Free Church of Scotland College, Glasgow, has just died at the age of eighty-three. He has to his credit a large number of theological works, including "Divine Truth and the Fact of Its Self-Revelation," "The Rationale of Prayer," "The Ascent of Man," and "The Case for Disestablishment in Scotland."

The Parsi community of India has lost one of its most distinguished scholars by the death at Poona, at the age of seventy-five, of Shams-ul-Ulma Sirdar Khan Bahadur Dastug Hosang Jamsap, Ph.D., high priest of the Parsis of the Deccan, who traced his descent from an unbroken line of the Zoroastrian priesthood through many centuries. According to the London *Times*, he was familiar with at least a dozen languages, in addition to Gujerati, his mother tongue, and at the time of the mutiny his mastery of Persian and Urdu was of great assistance to the British authorities in the discovery and interpretation of treasonable correspondence. But it was in realm of Zoroastrian research that he was most distinguished. He worked with the well-known Avesta scholars, Drs. Haug and West, devoting himself specially to the second of the two languages of the Zoroastrian scriptures, Pahlavi. A difficult and obscure work in that language, known as "Shikund Gumani," which he next edited, was published by the Clarendon Press, under the supervision of Dr. West. The Bombay government, recognizing the importance of such research to the Parsis of Western India, bore the cost of the publication of this and kindred works. The Parsis of the Deccan held their chief spiritual guide in great veneration, and quite recently those of Poona published an ornate volume of his sermons and addresses.

LEADERS OF THE CONFEDERACY.

Jefferson Davis. By William E. Dodd. [American Crisis Biographies.] Pp. 396. Philadelphia: George W. Jacobs & Co. $1.25 net.

Alexander H. Stephens. By Louis Pendleton. [American Crisis Biographies.] Pp. 406. Philadelphia: George W. Jacobs & Co. $1.25 net.

Judah P. Benjamin. By Pierce Butler. [American Crisis Biographies.] Pp. 459. Philadelphia: George W. Jacobs & Co. $1.25 net.

Lee and His Cause: or the Why and the How of the War Between the States. By John R. Deering. Pp. 183. New York and Washington: The Neale Publishing Company. $1.50.

At last Jefferson Davis, Alexander H. Stephens, and Judah P. Benjamin, the three leading statesmen of the Confederacy, have received adequate treatment as historical characters. Benjamin, aside from his record in the United States Senate and in the Confederate diplomatic correspondence, might almost have been called a mere tradition. Both Davis and Stephens were to nearly all elderly Southerners, objects of excessive admiration or of excessive dislike; but neither was well known in the North. The credit for this rehabilitation belongs to three young Southerners: Mr. Pendleton, a Georgian, and Messrs. Dodd and Butler, college professors in Virginia and Louisiana, respectively. Their tasks were very different, and they have not shown equal research and skill; yet each has manifested such wholesome sympathy with his subject while preserving such independence of thought and frankness of expression as to make his performance pleasing and highly valuable.

No open-minded person can read Professor Dodd's account of Jefferson Davis and continue to doubt that this famous Mississippian was first of all a thoughtful gentleman of quality; a clear-headed, upright, industrious, and progressive Secretary of War; a dignified, able, and thoroughly honorable, although highly ambitious Senator; and a President whose unflagging zeal and powers of leadership and administration proved him to be, if far from perfect, still the best available head of the Confederacy. And even in his weaknesses he was an almost perfect exponent of the people and the cause he served. Davis can hardly be called a thoroughly great and lovable character, like Lee or Lincoln; but as he had in him some of the stuff of which heroes are made, he will always inspire interest and respect. With equal clearness and force. Professor Dodd has destroyed Davis's constant assertion after 1860, and the common Southern belief, that he was a conservative. Davis's natural poise and excellent manners forbade that his methods should be those of the "fire-eaters." But the policies he advocated, the demands he made for the protection and strengthening of slavery were exactly in harmony with the main aims of Rhett, Yancey, and the other furies. With Davis as a running illustration, Professor Dodd shows the growth of the Southern infatuation for slavery, which, in the Southwest, advanced to the verge of an open and enthusiastic demand for the renewal of the African slave-trade. In Professor Dodd. however. Davis has a stout defender whenever he merits one. as he often does; and whether the biographer praises, defends, or criticises, he displays that most important but really rare quality in an historian—a passion for truth and a certain mental delight in compelling its acceptance.

Notwithstanding his superior qualities Professor Dodd must take heed lest his errors furnish hostile critics with weapons for his own destruction. He writes of Andrew Johnson as a shoemaker, instead of a tailor; of "Trescott of the War Department" when he means Trescot, Assistant Secretary of State; and of "Stonewall" Jackson's corps, instead of brigade, at the first Bull Run. South Carolina. according to Professor Dodd (p. 209), was richer than Massachusetts in 1860, although, in fact Massachusetts was then nearly twice as rich as South Carolina, after counting four-sevenths of South Carolina's whole population, the slaves, as wealth, when the Massachusetts laborers were not so counted. Then we are told (p. 321) that the Confederate cause might and ought to have been saved by rushing cotton to Europe in 1861; but the policy in which the Southern leaders were perhaps most nearly unanimous until 1863, and the one without which secession would probably not have been risked was, that by locking up the cotton in the South, England and France would have to come and break the blockade and help end the war. The Confederacy had no ships; and until the blockade became substantially effective, except against small ocean greyhounds, the price of cotton was not sufficient to tempt English ships of a kind that could both carry much cotton and enjoy a reasonable prospect of escaping confiscation. Accordingly this is a mere academic theory, which originated with the least practical of the Confederate chiefs. Professor Dodd asserts (p. 219) that there was a Confederate law making the African slave trade piracy. The Confederate Constitution did indeed forbid that trade, but it left to the Confederate Congress the task of making that prohibition effective by laws and penalties. The Congress did nothing whatever.

Unless you have been in scraggy Crawfordsville, looked over that plain house called Liberty Hall, with its unimpressive surroundings (which were once thought to resemble an academic grove), have seen the wretched roads and the many half-barren hillsides of that region, and have visited the abandoned and never fertile farm known as "the Stephens homestead." with a little cemetery in which are buried Stephens's kindred, mostly of the humblest class, you cannot fully appreciate either the resources or the limitations of the Vice-President of the Confederacy. Stephens's lucid speeches and morbid letters may seem to have left nothing untold; but they alone do not fully explain why, in a certain sense, everybody loved "Alec." or why he was also bitterly hated. How did it happen that at times he had more mental power than the ablest, and yet at other times was the weakest of the weak? By nature conservative, why did he crave political power and admiration at any honorable price? Although amply endowed with nominal courage and independence, why did he so often run with the crowd or pout in semi-solitude? We suspect that Mr. Pendleton is a martyr to circumstances. To solve the many enigmas of Stephens's life it would be necessary to study the sage of Liberty Hall as a physical weakling among giants, and a mental giant among weaklings, to analyze the Southern mind as it showed itself in different grades of society, and to expound the social and political dynamics of slavery. It should be remembered that the South does not relish criticism, especially when analytical. Our biographer may well have asked, with the poet:

> Had I words to complete it,
> Who'd read it, or who'd understand?

He has, at least, confined his narrative to an account of Stephens's main acts, without making a clear perspective or attempting a philosophical explanation of either the man or the epoch. Perhaps the most that the South would welcome as yet would be a mild and candid description of Stephens's acts, wise or unwise, his manners, and the qualities of his heart. Without adding anything valuable to the printed materials, Mr. Pendleton has given a good popular account of this pathetic career.

Few American public men have been so prominent in their inconsistency and unsteadiness as Stephens. Like a firefly, he was all light one moment and all darkness at another. Perhaps he will be longest remembered for his bold opposition to the Mexican war, his insistence that that war was not prompted by the interests of slavery, and then his equally bold insistence that slavery should fully share the spoils; for his speech at Augusta, 1859, telling the South that the advantages gained up to that time would be fruitless without "an increase of African slaves from abroad," because "it requires people of the African race to make slave States"; for his argument against secession, which was soon followed by great zeal in defence of secession; and for nearly four years of irrational, bitter. and very harmful opposition to Davis and to measures absolutely necessary to Confederate success. Of the many great handicaps of the Confederacy he was, says the latest biographer, the greatest. Ignoring the eternally true maxim, *inter arma silent leges*, he wailed, plotted, and caused serious embarrassments because, in a time of violent revolution, the letter of the Constitution was not strictly followed. On these and other subjects Mr. Pendleton has commented with a frankness that is admirable, although it will be certain to arouse unjust criticism. Yet there is nothing severe in Mr. Pendleton's comments, and he generously praises Stephens's numerous personal virtues.

In one chapter Mr. Pendleton seems to have felt entirely free to choose his own course. There he makes a long and interesting review of "Seventy Years of Disunion"—the different occasions when nullification or secession were conspicuously threatened. Not even here, however, does he impress one as a ripe student of history. Most of his chapters are meandering, conspicuously journalistic, and fail to show familiarity with the different phases of the larger questions. Professor Dodd preempted much of the general history; but Mr. Pendleton has not improved his opportunities. Surprisingly few details have ever been written about the Confederate Senate, over which it was Stephens's duty to preside; yet Mr. Pendleton has not vouchsafed to us more than a few commonplace remarks about it, and the words "Senate" and "Congress" are not even indexed.

What was most needed in relation to the smiling, silver-voiced, and facile Benjamin—unquestionably the most talented man in political life in the Confederacy, and Davis's closest friend and chief support in council—Mr. Butler has supplied. Long ago Benjamin's own relatives had become convinced that the thoroughness with which he had destroyed his papers and letters would make a satisfactory biography of him impossible. Yet Mr. Butler, from a thousand out-of-the-way places, has dug up the needed material and made an important and original contribution to history by presenting a practically complete record of this man, who was extraordinarily successful in law and in politics in America and in law in England. Benjamin's political career in Louisiana has been traced by a remarkable use of the newspapers of the time. The method is not new, but the results are above praise. At each period of Benjamin's life the biographer has found nearly all that was needed. Benjamin's letters describing his adventures by land and sea between the downfall of the Confederacy and his arrival in England, and the account of his second rise and more wonderful success, would seem like highly-colored romance if we did not know that they record facts. There was at different times a strong suspicion that Benjamin's honesty was not so unfailing as his smile and his readiness for any fortune. Mr. Butler makes no sophistical pleas. He admits, and even describes, the rather common suspicions, but he does not go to a conclusion, either one way or another, any further than the plain evidence warrants.

How did it happen that Benjamin freed himself from the obsession about "King Cotton," and, as a last resort to save the Confederate cause, inspired the policy of enlisting slaves as soldiers, and finally offered to surrender slavery itself for recognition? The reason is that he alone of all the prominent Confederates was a cosmopolitan. Like nearly every Northerner who settled in the South, he did as the Southerners did. This brilliant and not too scrupulous English Jew, who was partly educated at the North, who was the foremost lawyer in Louisiana, who was counted as one of the ablest and most agreeable Senators, and who tried planting on a large scale, had kept his mind active by reading literature and by an annual trip to Europe. Such a man could not long cherish what his biographer calls the "arrogant assumption that the old world must come and make suit to the Confederacy for its friendship." He, unlike all but a few, knew and enjoyed other civilizations, and could not be content with slavery-and-cotton provincialism.

Deering's so-called "Lee and His Cause" perfectly illustrates that old witticism that the Holy Roman Empire was thus styled because it was not holy, nor Roman, nor an empire. Yet perhaps this little volume of Memorial Day sentiment and of countless purple patches made up of fancy and fact, is not entirely worthless. It is so different from the foregoing biographies that it at least serves to point a contrast between the sentimental and imaginative and the realistic and historical methods of representing the past.

CURRENT FICTION.

King Spruce. By Holman Day. New York: Harper & Bros.

A story of the Maine woods and the lumber interests needs to be unusual if it is to attract attention, since for these many years the logs have been floating down into print on floods of ink. Mr. Day's story stands up like a mountain peak among lesser fellows for its large proportions and virile treatment. The word power applies in full meaning to his novel, which has the dual strength of the hills and of humanity. Rough, often cruel, hills they are, and rough, contentious, humanity. But the petty is unknown. Man fights his fights, lives his isolated months in the wilderness, recognizes, whether for keeping or for transgressing, the wood's code, and helps or injures in large ways. One must not be squeamish as to scenes of violence. Nature's noblemen are forced to adopt nature's methods; nature's ignoblemen even more.

Added to the universal interests there is a contemporaneous situation. The timber baron aspires to be elected Governor of Maine. He is the exponent of all that is Philistine in lumbering and greedy in politics; while the young hero aims at intelligent forestry and enlightened legislation.

The Under Groove. By Arthur Stringer. New York: The McClure Co.

There are two bits of wisdom which the world is fond of bestowing on would-be authors. The young dramatist is told that the first ten minutes of his first act must be twaddle, because people are then taking their wraps off and banging seats. The young story writer is told that there is no market for volumes of short stories. The effect on the dramatist is that he meets the demand, and turns out twaddle. The effect on the writer of stories is that he publishes volumes of short tales which are bound together by the personality of a single dominating character, detector of crime, criminal, or mere dispenser of philosophy in dialect. From the number of such books published in the last few years, it is to be supposed that the device is a successful one, and that a volume of short stories with a single hero sells more easily than a collection of unrelated tales. But if it is true that such books sell more easily, it is also true that they read with increasing difficulty after the third or fourth chapter. Even Arthur Stringer, in his latest volume, has not escaped the pitfall of monotony, and this in spite of a style and method incomparably superior to the average level of craftsmanship that is brought to the writing of stories dealing with crime and Byronic criminals. In themselves the eight stories, with one or two exceptions, would make good reading; the first story is excellent. But the author has intensified the element of sameness by resorting in them all to that familiar device of the electric wire which, whether for telegraph, telephone, or power current, he has employed in earlier books.

Matthew Porter. By Gamaliel Bradford, jr. Boston: L. C. Page & Co.

The theme of contemporary American politics continues to tempt our novel-makers, for the most part in vain. Why is it, the patient reader must ask himself now and then, that fumbling and half-heartedness are the rule in such attempts? Why are these honest and epoch-making statesmen, who are created almost hourly for our edification, such practical nuisances and bores? And why are the eager ladies whom they instruct, or who instruct them, in the duties of citizenship so uniformly dummy-like in their Egerian rôle? Why does the whole affair so commonly impress one as having been made "out of whole cloth?" Perhaps the reader does not take his politics seriously enough; or is it that he takes his fiction too seriously?

Mr. Bradford is a close student, and, as it were, an accomplished amateur, of politics. His Matthew Porter is Democratic candidate for Governor in that grim Republican stronghold, Massachusetts. He is possessed of or by an idea upon which his campaign is founded. It is an idea of engaging simplicity, to the effect that more power should be vested in the Governor, and less in the Legislature. He proposes to introduce what is practically the English Cabinet system into State politics, thereby enabling the Governor to direct legislation as well as to administer the laws. He is supposed to have immense personal force (to tell the truth, it does not leap from the page) by means of which he not only sways the crowd, but dominates the corrupt and reluctant bosses of his party. His means are not always upon the high heroic plane that an American is entitled to expect of his imaginary statesmen—as witness the interview with one Rooney, in which the reform candidate remarks, "I'm not the kind to make promises and I won't go into office tied up in any way; but I'm not the man to forget my friends either. If I'm elected, there'll be something for those that have helped me—provided they behave themselves and deserve it." One hardly marvels that "this sounded more like politics as Rooney understood them," and one inclines to think Rooney hardly dealt with when his request for a bird in the hand is met by a virtual threat of blackmail. Rooney "behaves himself." Porter is nominated and finds himself pitted against a Back Bay villain of a Republican whom in due season he defeats at the polls. Here the story ends, the implication being that the man has no difficulty in governing as he has said he will govern. His programme is simple enough:

> Let the Governor go to the people and say, "Look here. You elected me to do a certain thing. Here's a troop of nobodies who get in the way and tell me I shan't do it because it doesn't suit them. What about this?"

But it is a pity we do not see the Governor in action. For the rest, the narrative is cumbered with many irrelevant persons, and the inevitable love-theme is a wearisome affair.

The Postscript. By Eleanor Stuart. New York: The McClure Co.

That style of graceful, if studied, nonchalance conveyed from its Latin sources and made popular of late by Mrs. Wharton and others, continues to extend its mild influence. Miss Stuart shows herself mistress of it in the present little volume, the stuff of which is slight enough, but the way excellently contrived. The story-teller in this kind proceeds as an adept; finesse is the watchword. Things are to be said simply, though not commonly; but things in themselves are understood to be by no means simple. Saliency is to be given to subtilty in dealing with all data recorded, from the lifting of a lady's eyebrow to the after-worry of a homicide. It must be said that Miss Stuart's elegance has now and then the effect of strain. Her phrasing is almost too uniformly felicitous. It is well to read, "Peacocks spread the lazy vanity of their tails, and the sun made jewels in them like a guest dispensing largess at parting"; but the manner does not always fit the matter; all her little fishes of description cultivate the deep-water accent. At times the effect is frankly ludicrous. She comes upon a portrait of her dead husband in his youth. He wears a queer hat, but looks like a good deal of a man:

> Under obsolete headgear peered fearless Sandro's forces of the soul. This disciplined character—even in a photograph—smote the year 1888 with eternal verity, elemental force, and his peculiar energy which succumbed only to death.

This sounds like nonsense of a particularly irritating sort; it should be recorded at once that the writer seldom sinks to that level of unnecessary portentousness. The story is the not unfamiliar one of the young widow whose adoring memory of her husband is threatened with blight by the slander of an interested person. Her faith is restored, and, in her new sense of spiritual possession, the old sense of physical loss well-nigh ceases to be. The heroine is a rather commonplace little person, and one feels that the writer somewhat exaggerates the importance of her experience. Such a type, to acquire meaning, needs the sublimation of an interpreting art, and will by no means be put off with decorations of a fashionable artifice, however cleverly applied.

In the Dead of Night. By John T. McIntyre. Philadelphia: J. B. Lippincott Co.

For those who love a real mystery with a fortune of $200,000,000 at stake, with a grinning Chinese villain, three murders in a night, lurid scenes in Mott Street, a piratical dash on the East River, a lovely heroine, and a master hero just landed out of the stoke hole of a steamer which brings him from a South American revolution—for such as these is "In the Dead of Night." Mr. McIntyre has been unusually successful in ravelling up his mystery, but, as too commonly happens in these stories, the solution is an anticlimax. Too much that excited our curiosity is found to have been the mere work of chance; the dénouement is huddled up and arbitrary. Withal, we class ourselves unshamedly with those who take pleasure in such productions.

The Clutch of Circumstance. By James Barnes. New York: D. Appleton & Co.

In "Wonderland" this would be called a portmanteau story. Not content with the motive of lovers parted by slander and fraud, incriminating photographs and damning silences, the author gives us the drug-taking motive, the flippant other woman, the labor strike, the dynamited dam, then the murder and mystery motive, the familiar trial scene, the death-bed confession; and he finally lets us gayly cheer the bride. It is unquestionably commodious and fairly interesting. But the portmanteau story to be perfect must be packed solidly or on the journey the contents fall to hitching and fidgetting.

The persistent use of "will" for "shall" is not original with Mr. Barnes. Unfortunately he has abundant precedent. But let him look to his guides. Simplified grammar is, we trust, still in abeyance.

In Korea with Marquis Ito. By George Trumbull Ladd. New York. Charles Scribner's Sons. $2.50 net.

This book carries its contents in epitome on the cover. Stamped in gold is the emblem of embattled Japan and her war-flag of sun and broad rays, obscuring the Korean symbol of cosmic dualism. The rising sun makes nearly invisible the lesser play of light and shadow. The story as stamped and printed is one of fact. Whether the symbol presages ultimate truth the oracle does not yet whisper; for Japan has not yet annexed Korea.

For the serious student Dr. Ladd's book by no means supersedes the works of Dallet, Hulbert, and others who have studied Korea in the perspective of history, language, and literature. It is, however, a clear and timely statement of personal impressions, unusual opportunities and experiences, and strong convictions. Its general tone is that of an advocate, even to partisanship. Yet the report corresponds closely with the knowledge of those who in the cool atmosphere of the study and from the native literature, have learned the truth about Korean character and history. Here is a nation, geographically unfortunate in being set between the two opposing nations of China and Japan. Under the crucial test of contact with Occidental civilization and adjustment to the new conditions, Korea has made a tragic failure. Professor Ladd's picture is a sad one. Instead of giving the people honest government and popular education—the cheap defence of nations—the rulers of Korea resorted to cunning and treachery. To play off one set of foreigners against another has been their idea of statesmanship. The real council board has been in the harem and eunuchs have been advisers of state. Patriotism has rarely risen above the idea of self-aggrandizement and personal plunder. When the native assassin (since this book was published) wounded Korea on American soil by shooting Stevens, he removed from earth the man who, under every scheme of plunder, whether ostensibly Japanese, American, or otherwise foreign, sought and found a native scoundrel.

It is perfectly true that while Japan was wrestling with Russia, hundreds of disreputable Japanese were in Korea as bullies, rowdies, and even as friends. One must not judge Japan by her soldiers only, who are under the discipline of a thousand years of knightly tradition. Indeed, as a people, the Japanese seem almost to possess a dual personality. Outside the canons of Bushido, there is no such general code of ideals or practice restraining the city rough, the rustic clown, and other rascals who are sufficiently numerous in Japan and who, when abroad, match Korean cunning and cowardice with brutal violence. Such undeniable facts have furnished men like F. A. McKenzie in his books "The Tragedy of Korea" and "The Unveiled East," the editor of the *Daily News* published in Seoul, and Homer B. Hulbert a basis for their vehemence of statement regarding Japanese cruelty. To each of these writers Dr. Ladd pays his respects. The coming of Marquis, now Prince, Ito to Korea, was the signal for the arrest and deportation of scores of these rascals who so violently misrepresented Japan's purpose and policy in Korea. As soon as peace allowed, Japan's chief constructive statesman was sent to begin what may be his crowning work in making Korea a modern state. Holding the military party in Tokio at bay, Ito, who as early as 1863 threw down the torch and sword to follow the slower, but surer methods of the civilian, now insists that Korea shall not be annexed but, though deprived of her power of intrigue, shall work out her own salvation by uplifting her people and developing the country's resources.

This is the burden of Dr. Ladd's book. With wealth of example, argument, and transcripts from varied experience, he sets forth his faith with extraordinary clearness. He is also courageous. Known as a lifelong friend of Christian missions, he yet lays open, with a surgeon's knife, the political motives that underlie much of the emotional Christianity of the converts and points out the unwisdom of some missionaries who seem to imagine that the kingdom of God is of this world. In one respect Professor Ladd's strong partisanship is at fault. The judicially-minded man, who remembers the days of incendiarism, assassination, and bloody turbulence of feudal Japan, cannot go with Dr. Ladd in his apparent ascription of current performances of bitterly disappointed patriots to the permanent characteristics of Korean people. Indeed to one who saw the real Japan of the seventies there is nothing discouraging in the future of the Koreans. Japan seemed once as hopelessly divided as Korea to-day.

The author's text is supplemented by protocols and treaties and is indexed and illustrated.

Critical Essays of the Seventeenth Century. Edited by J. E. Spingarn. Vols. I. and II. New York: Henry Frowde. $1.75 each.

When Professor Spingarn has produced his third volume of the present work, we shall have, beginning with Gregory Smith's "Elizabethan Critical Essays" and ending with W. P. Ker's "Essays of Dryden," a pretty complete library of our critical literature through the seventeenth century. To these may be added D. Nichol Smith's "Eighteenth-Century Essays on Shakespeare," which gives the heart of the critical debate of that age, and brings us down to the voluminous literature of the romantic revival.

All these works are notable for their excellent editing, and not least notable the two volumes just published. As for the essays, letters, and poems reprinted, it can only be said that they cover practically the whole field of seventeenth-century literary discussion, with the exception of Dryden's work, which Professor Spingarn has wisely left to be consulted in Professor Ker's edition. No one familiar with the age need be told that much of this writing has historic interest only, and that even in this respect it is for the most part disappointing. Yet there are a few of these essays that still challenge attention. First of all comes the selection from Bacon's "Advancement of Learning," with its biting analysis of the "three distempers . . . of learning: The first, fantastical learning: the second, contentious learning; and the last, delicate learning; vain imaginations, vain altercations, and vain affectations." It would not be difficult to fit the threefold warning of Bacon to the writers and scholars of to-day. Jonson's "Timber" also is full of grave discourse. His influence as champion of classic tradition, stalwart in theory but in practice often unfaithful, has never been properly worked out; perhaps we shall have such a study in the new edition of his works promised by the Clarendon Press. In the "Answer to Davenant" Thomas Hobbes gives his famous division of poetry into heroic, scommatic, and pastoral according to "the three regions of mankind, court, city, and country." Here, as in all his writings, he proves himself one of the great and undeceived knowers of human nature. Next in interest are Thomas Rymer's "Tragedies of the Last Age" and "Short View of Tragedy," unfortunately too long to be included in full. Macaulay thought Rymer "the worst critic that ever lived." We are not so sure about that. It is certain that Rymer had an abnormally keen scent for incongruities and absurdities; and his general condemnation of the Elizabethan drama for its defiance of simple structure and of moral consistency is as right from one point of view as from another is Lamb's ecstasy over the passionate beauty of individual scenes.

But withal the bulk of these two volumes is not only poor in substance, but so confused in aim that only a trained scholar is able to follow its lines of real development. If so presumptuous a generalization were permitted, one might find a curious alternation of unity and dispersion in the last four centuries. In the sixteenth century there predominates the single idea of a return to nature, as exemplified in the past—to the classics in the southern humanism, to the early fathers in the northern Reformation. The seventeenth century is confused by cross-currents of opinion, out of which gradually emerges the eighteenth-century conception of nature and reason—they are one—as the basis of philosophy, religion, political rights, and taste. Again, the nineteenth is broken up by uncertain tendencies pointing in every direction, from which there is apparently forming a conception of humanitarianism destined for a time to dominate every branch of philosophy. Whether so regular a scheme of contraction and expansion is fanciful or not, at least it is true that the critical literature represented in Professor Spingarn's volumes is filled with hints of half-digested ideas and marked by gropings in many directions. To such an extent does this prevail that, without the right key, a reader may flounder through treatise after treatise, and seem to get nowhere at all. The key is a knowledge of the contemporary and precedent critical writing of Italy and France. And here our editor, with his perhaps unique familiarity with this literature, comes valiantly to the rescue.

His Introduction is not easy, nor altogether agreeable, reading. There is a kind of bustling haste in its procedure, which might have been relieved by better composition, without sacrificing the ideas. It is, nevertheless, a highly valuable piece of work, showing in a single page more real grasp of the subject than Saintsbury's "History of Criticism" displays in a chapter. Here you will find the half-conscious hints of the English writers thrown into relief by comparison with the works of the Continent, so that what seemed a jumble of incoördinate and personal predilections takes the form of a large and almost continuous movement. These variously used terms of wit, humor, rules, judgment, fancy, nature, taste, reason, decorum, sense, profit, pleasure, become clear sign-posts on the way from the sixteenth to the eighteenth century. Take, for example, these few lines of Professor Spingarn's on the most elusive word in language, Nature:

> This is the key of the whole matter: the universe conceived as governed by law, with general human nature as a microcosm of this mechanical order on the one side, man's mere whim on the other. So Rymer distinguishes nature alike from romance (*i. e.*, "la vague imagination") and from mere historic fact (*i. e.*, nature not réglée); and something of the same connotation still subsists in such phrases as "an unnatural mother" and the like. The century's outlook on life is summed up in a single critical term; no wonder then that the term should limit itself more and more to the specific interests of the age—to that social order which seemed the best safeguard against individual whim, and to the regulated life of cities—and that these should extend themselves in their turn until they seemed commensurate with nature itself. Civilized society was governed by the same order and law which seventeenth-century science was discovering in the physical universe, and the social code therefore represented the equivalent of "nature" in man's life. It was on this side that the Horatian "decorum" connected itself with "nature." When Johnson distinguished custom from nature, when Houdar de la Motte distinguished between the natural and the *naïf*, and Shenstone between natural and sentimental, they were not merely making distinctions of terms or adding to our knowledge; they were giving a new interpretation of life itself, such as the previous century would not accept. "Wenn Künstler von Natur sprechen," said Goethe, "subintelligieren sie immer die Idee, ohne sich's deutlich bewusst zu sein." The mechanical universe of the philosophy of Hobbes and Locke is thus the basis of seventeenth-century criticism; and the sense of mechanical order in nature was implicit in all thought. This was the highest justification of the Rules: they represent the order that is found in nature; they are "nature still, but nature methodized."

Such a paragraph shows the fulness of Professor Spingarn's learning and the somewhat crabbed condensation of his style. When his idea is once firmly grasped it affords a clue to unravel a large amount of misty talk about nature in the seventeenth and eighteenth centuries as in the present. Some of the most interesting of the critical treaties are reserved for the third volume, which promises also a full index.

Personalism. By Borden Parker Bowne. Pp. xli., 326. Boston: Houghton, Mifflin & Co. $1.50 net.

This volume comprises six lectures, delivered by Professor Bowne in 1907 at Northwestern University on the N. W. Harris Foundation. They expound the author's metaphysics of personalism, which he summarizes as follows:

> A world of persons with a Supreme Person at the head is the conception to which we come as the result of our critical reflections. The world of space objects which we call nature is no substantial existence by itself, and still less a self-running system apart from intelligence, but only the flowing expression and means of communication of those personal beings. It is throughout dependent, instrumental, and phenomenal (p. 277).

We are thus invited to believe that only these personal beings really exist, and that, as they communicate with one another, they project "on the great space and time screen"—which screen itself exists only through the mental construction of these persons—what we call nature. They project accordingly solar systems, mountains, lakes, and rivers, forests and the mineral resources of the earth, their own bodies and the bacteria and bacilli which at times infest their bodies. They impart to all these things the principles governing them, and thus make possible the various operations of nature, such as lightning and thunder, plague, pestilence, and famine. It is evident, therefore, that these persons have a good deal to communicate to one another, and that their remarks are often unkind and unseemly. Professor Bowne does not enumerate the instances of their communication with even the meagre details upon which we have ventured. If he had done so, it is difficult to believe that he would exhibit so much calm assurance about the truth of his metaphysics, or that he would think that his views must inevitably force themselves upon reflective inquiry. In the times of romanticism, when the imagination knew few restraints, and philosophers prized intellectual experiences of the dialectical kind above serious inquiry, Professor Bowne's metaphysics would doubtless have found a congenial atmosphere. But to-day, when the business of philosophy is not to create intellectual confusion in order to remove it afterwards through metaphysical theory, and when we are forced to think of persons, not as the creators of nature, but as parts of it whose great problem is that of self-maintenance, his metaphysics is likely to provoke amusement in many minds, rather than serious consideration.

Yet this kind of metaphysics is by no means uncommon at the present time. It maintains itself with conspicuous success in important seats of learning. The critic of it is hardly justified, therefore, in dismissing it simply because it amuses him. He is, doubtless, under obligation to discover the causes of its vitality. These are various, but two of them may be specified here because they are prominent in Professor Bowne's book.

Personalism and its kindred forms of metaphysics may not improperly be described as spiritual philosophies. They tend, because they make the things of the spirit prominent, to produce an emotional uplift which other philosophies usually fail to impart. We naturally demand of philosophy that it should afford consolation, but while naturalistic metaphysics is much more in harmony with our present scientific and industrial achievements, it has not generally succeeded in replenishing the springs of emotion. It finds it difficult, and, perhaps, inappropriate to conclude its speculations as Professor Bowne concludes his sixth lecture, with the quotation: "To as many as receive him, to them gives he power to become the sons of God." It presents itself, consequently, to many minds not simply as incomplete, but as essentially inadequate and misguided. Then, too, philosophy is strongly humanistic and can hardly fail to lay emphasis on personality. "Not to form abstract theories," says Professor Bowne, "but to formulate and understand this personal life of ours is the first and last duty of philosophy" (p. 318). That may be a restricted, but it is a noble conception of philosophy. It can be developed—witness Prof. George Santayana's "Life of Reason"—with beauty and intelligence without descending to the kind of metaphysics which "personalism" promulgates. But just because Professor Bowne emphasizes "this personal life of ours," he gives to his metaphysics the semblance of an interpretation of that life. Thus one cause of the vitality of his metaphyhics is found in its ministry of consolation and its regard for personality. Its genuine inadequacies are thereby obscured.

We find another cause in the fact that the metaphysics starts from the problem of knowledge and is controlled almost exclusively by that problem. The key to the interpretation of the world is sought not in what knowledge may reveal about nature, but in what knowledge may reveal about itself. Philosophy becomes thus detached from the natural and empirical checks which restrain the sciences and keep them from wandering so far away from nature that they can develop internal logical consistency at the expense of truth. Now to make the fact that we know, a problem, irrespective of the detailed consideration of the actual concrete information which we have about nature, has been a fashion current in philosophy since the time of John Locke. From the nature of the case it is a fashion whose devotees need not be at all concerned with those bodies of knowledge which are the results of scientific investigation. Philosophers of this type can find the deliverances of science entirely irrelevant to their philosophizing. It is natural, therefore, that they should feel a certain security about their own conclusions and impart to their reasonings an internal logical consistency which knows no external restraint. As science is not invoked for material, it need not be invoked for proof or refutation. The philosopher comes thus to believe that he has attained intellectual freedom and that he possesses profound insight.

Here is Professor Bowne's central argument:

> If the things themselves are really processes in space and time, they become anything articulate for us only through the ideas by which we fix the processes into a meaning. But, on the other hand, it is plain that these processes could not be grasped through these ideas unless they were really the expressions of ideas. It would be incredible that we should know things by ideas essentially unrelated to them; and as the ideas by which the things are constituted are independent of us, there must be a supreme intelligence behind the things which makes them the bearer or expression of the ideas. We cannot understand noises unless they are informed with thought, and they can be informed with thought only as there is a thinker at the other end. In the same way things can be grasped by thought only as they are the products of thought (pp. 118, 119).

A rushing river makes a noise. We may not ask Professor Bowne to produce the thinker at the other end, for his metaphysics is built up, not by considering that there are such things as rivers, but by considering the fact that we sometimes hear them.

Primitive Secret Societies: A study in Early Politics and Religion. By Hutton Webster, Pp. xiii, 237. New York: The Macmillan Co.

Professor Webster has hit upon an interesting and in some respects important topic of the miscellaneous science, if it be a science, known as folklore. Indeed, it was rumored some time ago that Dr. J. G. Frazer, who is the master of all who know in this out-of-the-way division of human learning, was devoting himself to the study of one branch at least of Professor Webster's theme—initiation ceremonies. It is obvious that these in their origin might throw light upon such diverse topics as the mass, freemasonry, the communion table, college "hazing," the Eleusinian mysteries, and indeed all the observances which guard exclusive portals. Mr. Webster has not even glanced at the wider issues of his subject. He keeps in a business-like manner to his theme and collects from the more or less familiar sources the practices relating to the societies within the clan and within the tribe from which some sections are excluded either by age or sex or other disqualification.

His starting point is the separation of sexes in the "men's house" found throughout Polynesia and even elsewhere. Adopting A. Crawley's ingenious view of the sexual origin of this separation in his "Mystic Rose," Professor Webster treats the "men's house" as the outcome of what he terms the puberty institution; and he deals with the secret rites, the training of the novice, and the power of the elders. All observers are agreed that the training the young savage receives on passing from boyhood to manhood is of the greatest possible value, and that it would be well if more civilized youths were equally drilled in obedience, in self-restraint, and in knowledge of the proper attitude toward the sex problem. These portions of the book are filled with curious and interesting details which lighten Professor Webster's somewhat wooden treatment with vivid detail.

After discussing the development and functions of tribal societies, Professor Webster traces their decline. He then advances to the chief novelty of his investigations, his attempt to prove that these societies are developments and manifestations of the original totemic organization of society. The evidence he adduces is scarcely convincing; and altogether the condition of our knowledge with regard to totemism has been so revolutionized by W. B. Spencer and F. J. Gillen that such a reconstruction is at the present moment somewhat hazardous. Nevertheless, Professor Webster's careful collection of facts constitutes in itself a valuable contribution.

Ancient Jerusalem. By Selah Merrill. Illustrated. New York: Fleming H. Revell Co. $6 net.

Dr. Selah Merrill's acquaintance with Jerusalem dates back to 1869, when he was connected with the American Palestine Exploration Fund, organized to conduct explorations east of the Jordan, while the English Fund cared for the West. In connection with that work he wrote "Explorations East of the Jordan"; and he is also author of a small popular book, "Galilee in the Time of Christ." For sixteen years he was American Consul in Jerusalem. His long experience in the Holy Land and his special opportunities for investigation led us to expect from this volume much pleasure and profit. We have been greatly disappointed.

It is a book of magnificent spaces, stately in appearance, printed on paper so heavy that the 400 pages feel like 600, with broad margins, short chapters, further divided, for the convenience of the reader, into sections, without foot-notes, with numerous maps and plans, and a reasonable number of photographic illustrations. Somewhat the same lavishness of space which we find in the printing of the book appears also in its composition. Many of the maps seem to be mere repetitions, only a close study revealing some small point of difference. Similarly the argument advances slowly, in a circular manner, as it were, with frequent repetitions.

The gist of Dr. Merrill's thesis is that, contrary to the generally accepted view of the present day, but in accordance with the view first propounded, we believe, by Robinson and now maintained by Conder, the original city of Jerusalem lay not on the eastern, or Temple, hill, but northward of the present Zion, or westerly hill, in the neighborhood of the Church of the Holy Sepulchre; and that the Acra, which plays so prominent a part in the story of the Maccabean contests, was located at this spot. The tombs beneath the Church of the Holy Sepulchre he believes to be the tombs of the ancient Kings of Judah. Dr. Merrill holds that he who would explore scientifically the topography of Jerusalem must begin with Josephus's account of the siege of Jerusalem in 70 A. D., and work backward and forward from that date; and he depends mainly upon Josephus, as he interprets him. To support this view that the hill north of Zion was the original city, the site of David's Millo, and of the Acra of the Maccabean period, Dr. Merrill abandons the commonly received view that Gihon of the Bible was the Virgin's Well, identifying it with Birket-Mamilla to the northwest of Jerusalem. Dr. Merrill is quite out of sympathy with modern views, and especially with modern views of the date and composition of Old Testament books, and on that account he fails to use the Bible effectively in his topographical studies. Moreover, his whole presentation is one-sided; he cites only that which tends to support his positions.

Science.

North American Trees: Being Descriptions and Illustrations of the Trees Growing Independently of Cultivation in North America, North of Mexico and the West Indies. By Nathaniel Lord Britton, with the assistance of John Adolph Shafer. New York: Henry Holt & Co. $10 net.

This is one of the volumes in the American Nature Series, a group of works designed to "answer questions which the contemplation of Nature is constantly arousing in the mind of the unscientific intelligent person." The series is to be comprehensive. According to the prospectus, it is to include the following divisions: Classification, Functions, and Realms of Nature, Working with Nature, Diversions from Nature, Man in Nature and Evolution. The present volume, the third in the first division, ought perhaps to be judged as a member of the series rather than as an independent treatise. If it is compared with some of the recent works on North American trees, such as C. S. Sargent's "Manual" or R. B. Hough's "Handbook," a decided preference would probably be expressed for either of the latter on the score of convenience, and of superiority of illustration. Professor Britton, who is director of the New York Botanical Garden, has been compelled by the demands of the series to give us a ponderous work instead of a handy manual. The amateur would not carry this bulky volume into the woods for the identification of trees; but in the home library it can fill an honorable place.

The author has endeavored to meet the "unscientific intelligent person" about halfway, by giving great prominence to the common instead of the botanical names. In the descriptions of species, for example, the common name comes first, in large type, and with excellent effect. There is always the objection that the common names may be different in different localities, as in the case of wintergreen, checkerberry, boxberry, etc.; but in this period of upheaval in biology, the scientific names are not the same everywhere. This latter statement is abundantly illustrated by Professor Britton's treatise. For instance, a Florida tree belonging to the four o'clock family, here figures under the name Torrubia longifolia, whereas, Sargent gives it as Pisonia. The common name "blolly" is easier to remember than either.

Although Professor Britton has marked the geographical limits on the title-page as north of Mexico and the West Indies, he has wisely included many references to outlying species which are practically within reach of our South. Many tropical species, like mahogany, have invaded our extreme Southern limits, and they deserve a certain place in a treatise like this. The authors have brought together a considerable amount of trustworthy and valuable information relative to uses, pharmaceutical and other. There is a good glossary of technical terms, and a double index, which appears to be full and accurate.

Next week the Macmillan Company will publish the third volume of the "Cyclopædia of American Agriculture," edited by Prof. L. H. Bailey. This volume is devoted entirely to animals.

Henry Holt & Co. have in press a volume by Vernon L. Kellogg, called "Insect Stories," to be issued in their American Nature Series.

In "Nature Study: a Manual for Teachers and Students" (Charles Scribner's Sons) Frederick L. Holtz of the Brooklyn Training School for Teachers has achieved a difficult and important task. He has attempted a practical textbook, embracing the whole field of natural science, for teachers of nature in normal training schools. No one mind can cover all parts of so vast and varied a field with equal ability; and it is therefore not strange that Mr. Holtz has treated some of his subjects superficially. Nevertheless, his book ought to be a helpful one to those for whom it was written. A somewhat jagged colloquial style results from the writer's adopting the attitude of a lecturer or instructor of a normal class. Part iii. gives "a graded course of nature study" which outlines for novices in teaching a method of continuous work which, though necessarily crude and incomplete, has many useful hints. In an appendix Mr. Holtz has a largely extended and classified list of useful books. This gives an impressive view of the enormous amount of nature literature afloat. And yet one observes some remarkable omissions, and wonders on what principle some of the selections have been made. Imagine, for example, a brief but excellent note on spider life wherein the writer ignores Emerton's "Common Spiders" and McCook's "American Spiders and their Spinningwork"; or that sends teachers to the ants, but gives them no clue to the last-named author's works on those insects, or to the numerous and admirable papers of Prof. W. M. Wheeler of New York, *facile princeps* among American (or indeed the world's) myrmecologists.

In the "Insect Book" (New York: the John Lane Co.), W. Percival Westell has given a brief but effective study of the more common insects of Great Britain. It does not aim to be a complete treatise. It does not affect strict scientific modes, but seeks to win the attention of the average reader to the attractive habits of creatures that everywhere surround us. Although written for British readers, it may well find a place upon an American library table, for the insect fauna of the two countries has much in common. Mr. Westell has succeeded in writing a delightful little book, easily read at a sitting, and in the main, accurate. But can he find good authority for his statement (p. 58) concerning "the wood ant" (apparently meaning Formica rufa), that "male ants accompany the females and help them to construct the insect city"? This seems to be wholly contrary to the general character of the male ant as a confirmed "gentleman loafer." One might also doubt if Mr. Westell has not gone too far in his aim to be popular and simple, by omitting so generally the scientific names.

Wilhelm Ostwald has issued, under the title "Der Werdegang einer Wissenschaft" (Leipzig: Akademische Verlagsgesellschaft), a new edition of his "Leitlinien der Chemie," only a little more than a year after the publication of the first edition. In speaking of the relations of Berzelius to his successors, Professor Ostwald enlarges on the frequent fate of a great man, especially if he be a leader in science, to be superseded by his followers, who, so to speak, stand on his shoulders. In the life of such a man we can distinguish, says the author, three periods. At first he stands alone, far ahead of his time, understood by none; then the younger generation grasps the new idea and carries it triumphantly over all obstacles, while the leader, relieved from detailed investigations and intent chiefly on pointing out the way, gradually loses touch with the younger men. Now the third period begins, the most pathetic in the life of a great man, when he either entirely steps aside, content to let the development take its course, though he himself be out of sympathy with it; or when, from a sense of duty, perhaps, and wishing to serve his cause as long as life and strength remain, he struggles against the new ideas which he cannot understand, and which he regards as tending to destruction.

Henry Phipps of Pittsburgh has offered a large gift to the Johns Hopkins Hospital at Baltimore—the amount is said to be $500,000—for the foundation of a Psychiatric Clinic, on the lines of similar institutions in Europe. The funds are to provide for the construction of a four-story hospital building on the Johns Hopkins Hospital grounds, to accommodate sixty patients, together with rooms for private patients, modern apparatus, and laboratories for the investigation of mental abnormalities. In addition, Mr. Phipps will maintain a skilled medical and nursing staff, and will pay the salaries of a professor of psychiatry and his assistants.

Drama.

Tragedy. By Ashley H. Thorndike. [The Types of English Literature.] Boston: Houghton, Mifflin & Co. $1.50 net.

It must be said that the *genre* attempted by Professor Thorndike in this not bulky volume is extremely difficult, if not impossible. In the first place the separation of tragedy from comedy forbids a full and unified historical view of the stage, and as a matter of fact Professor Thorndike's study suffers seriously in this respect; the physical conditions of acting in Shakespeare's day, important as they are for understanding the drama, are hurried over as being only half within his province. And to divide the work of a man—for most of the older dramatists wrote both tragedy and comedy—between two independent treatises must result in strange inconveniences, to say the least. On the other hand, even with one-half of the drama reserved for another book, it is impossible within so brief a compass to deal satisfactorily with English tragedy from the beginning almost to the present. Side lights and illustrations must be sacrificed. Thus, the personality of the tragedians can be seldom and scantily touched on. Yet the possible gain from anecdotes may be measured by Professor Thorndike's passing allusion to the fact that Marlowe's plays were composed to set off the acting of Edward Alleyn, whose stature (he was nearly seven feet tall) and imperial port had not a little to do with encouraging Marlowe in his extravagances as well as in his brave translunary things. And, beyond these lesser matters of biography lies the great field of history. There is only one way of comprehending the sudden alternations of passion, the bewildering conversions, and the whole absence of moral consistency in the Elizabethan tragedy (outside of Shakespeare, though even he does not entirely escape the confusion), and that is by comparison with the actual careers of the day. The life of Mary Stuart is the best commentary on the plays of Beaumont and Fletcher.

We must insist then that a good deal of the present work is necessarily unsatisfactory. It is not complete enough in detail to serve the scholar; it is often too meagre to preserve human interest. But, within the limitations, Prof. Thorndike has succeeded commendably. Perhaps, in his introductory chapters he has just fallen short in the difficult task of defining tragedy and marking out the scope of the work before him. Thus, in discussing the inevitable *katharsis*, he queries:

> Is it true that these elements of relief are always felt, or are always triumphant over our depression and dismay? May not the impressions of pain and destruction be unrelieved and overwhelming? What relief or exaltation is there in the first impression from "Œdipus," "Lear," or "Ghosts"? We are filled with confusion, dismay, pity. We cannot separate ourselves from the misery. We feel the intolerable burden of the world's woe. Our sympathies struggle beneath it, vainly, despairingly.

It seems to us, without entering into the question at large, that the impression produced by "Œdipus" and by "Ghosts" is essentially different, moral and liberating in the one case, physical and contracting in the other; and that this difference might have pointed the way to certain important generalizations which would have been serviceable throughout the book.

Elsewhere Professor Thorndike does not miss his opportunities. His tracing of mediæval methods into the Renaissance drama, his contrast of Christian and Senecan ideas, his connection of the Restoration with the Elizabethan stage, are notable both for scholarly understanding and clear execution. He is at his best, perhaps, in these historical sections, yet his characterizations of individual writers and plays, despite the limitations of space, are at times excellent. His comments on Chapman, for instance, are remarkable for saying much in little space. He is, of course, strong in praise of Shakespeare's fundamental qualities. Nevertheless, he is not afraid to speak of the "Elizabethan looseness of coherence" that marks the close of "Hamlet," or, while calling "Lear" an astounding triumph, to add that it does not "free itself entirely from a confusion of archaisms and absurdities." After the enormous efforts of Shakespearean scholars to justify the extravagances of these plays, it is good to hear the simple truth.

It is clear that Professor Thorndike has room in his sympathies for both the romantic and the classical conceptions of tragedy, as is shown particularly in his account of the eighteenth century. "Not one of the literary forms in which the eighteenth century excelled," he says, "and not one fully representing the pseudo-classical theories, tragedy cannot be fairly judged as representing classicism versus romanticism." The true romantic would not have given up his advantage so readily as that. Indeed, Professor Thorndike can add:

> Stage illusion and precision of effect may be aided by an observance of the unities, and the limitation of the action to a single plot, a few persons, and a few scenes—Shakespeare and encomiasts of his art to the contrary notwithstanding.

Yet, as a sign of his breadth or, may it be? a mark of conflicting ideas not quite reconciled in his mind, he can in the same chapter speak of "Johnson's salutary condemnation" of the unities.

Three new volumes (reckoning the double number as one) of the Tudor Facsimile Texts, from T. C. & E. C. Jack, of London, call for little comment, as they are of precisely the same character as the earlier issue reviewed in the *Nation* of April 16. For the present publication, Mr. Farmer, the editor, has taken four out of a group of seven "'Youth' and 'Prodigal' Plays," which together will cost £6 2s. 6d. net. One of the present quartos is a double number, containing the two parts of Henry Medwall's "Nature," reproduced from the only known copy (in the British Museum) of the only known edition (c. 1486-1500), though fragments of other copies exist. The second play is "Hickscorner," from a copy of the edition printed by Wynkyn de Worde some time in the first years of the sixteenth century. The date of composition is limited by an allusion to Newfoundland, discovered by Cabot in 1497, and another allusion to the ship Regent, destroyed by the French in 1512. The third play, "Youth," is from the unique copy, in the British Museum, of the edition of 1562. The relation of this edition to the two earlier known editions of the interlude will be set forth in another volume of Mr. Farmer's series. These collotypes, we need scarcely repeat, are beautifully made and reproduce the originals as exactly as human ingenuity can effect. J. A. Herbert, of the manuscript department of the British Museum, has compared the copies with the originals, and noted the least variation. In one or two places, the copy is slightly blurred, and in one place there is a spot, about the size of a pinhead, above a letter in the copy which is not in the original—variations that can scarcely alarm the most minute scholar. There are fifty plays already printed or in preparation, and others will be added if sufficient support is forthcoming. In one respect the usefulness of the books might be much improved at a comparatively small cost. A reprint in modern type ought to be added. This in double columns would require only a few pages of these quarto volumes.

Volumes XXIV. and XXV. of the Dowden Shakespeare have just been issued, in this country, by the Bobbs-Merrill Co. They contain "The Comedy of Errors," edited by Henry Cunningham (who prints "W. W.'s" translation of the "Menæchmi" in an appendix), and "King Richard the Third," edited by A. Hamilton Thompson. Mr. Cunningham holds to Malone's theory that Shakespeare spent part of his youth in an attorney's office.

The earlier and more general chapters of Jeannette Marks's "English Pastoral Drama" (London: Methuen & Co.) are feeble and sophomoric. The latter part of the book, which deals with specific pastoral dramas from the Restoration to the date of the publication of the "Lyrical Ballads," has some value in so far as it gives brief notices of plays that very few even among professed students of the drama have read. The most valuable section of the book is the bibliography in the appendixes.

Among the most important of recent contributions to French dramatic literature is a versified drama which is a genuine poem, the "Polyphème" of Albert Samain, a piece in two acts which has been given by the Comédie Française. The author died eight years ago, known for rather subtle, exquisitely worded poems. This posthumous production is more likely than any of them to remain in French literature.

"Le Théâtre nouveau," by René Doumic, gives a literary appreciation of recent plays by the critic of the *Revue des Deux Mondes*. The place the drama holds in contemporary French literature is shown by the fact that so many successful playwrights have been rewarded by seats in the French Academy—Paul Hervieu, Henri Lavedan, Jules Lemaître, Edmond Rostand, Maurice Donnay, and Jean Richepin in this volume. Among the others criticised are Lucien Descaves of the Goncourt Ten, Brieux, F. de Curel, Alfred Capus, Pierre Wolff, and the veteran Catulle Mendès. It is an event that Émile Faguet, another Academician, should have been obliged by ill health to abandon the historic chair of theatrical criticism at the *Journal des Débats*; his successor is Henri de Regnier.

Maurice Pellisson has translated into French the Danish investigations of Karl Mantzius on "Molière," the theatres, public, and comedians of his time.

Robert Mantell promises that at his engagement in this city next season he will give a spectacular revival of "Richelieu"; "The Merchant of Venice," with the scenery, dresses, and properties used by Beerbohm Tree in London; and "King John." This last is the most interesting announcement of all. It is so long since this play was presented here that it will come as a positive novelty to the vast majority of playgoers. Yet, as an acting play it stands high in the Shakespearean list. It is full of vital character and effective scenes. But it requires something more than one competent actor and a company of sticks. This was one reason, probably, why it did not figure in the later repertory of Edwin Booth. There are great possibilities in the parts of Hubert, the Bastard, Arthur, Elinor, and Constance, as well as in that of King John himself; and much may be made, by really able performers, of such lesser characters as Philip and Pandulph. Mr. Mantell, by a process of survival, has become, perhaps, the most prominent of our dwindling group of tragedians, and with capable support, especially in the leading female parts, he might become a dramatic figure of comparatively imposing dimensions. But he is not an actor strong enough or brilliant enough to make his way to the front, while laboring under such a handicap as he has been subject to during the last few seasons.

The London Stage Society has just produced "Links," by Herman Heijermann, the author of "The Good Hope," in which Ellen Terry played here some time ago. It is an intimate study of domestic life with dashes of coarse realism which are neither necessary nor pleasant.

During his coming tenancy of the London St. James's, Forbes Robertson will rely upon a new play by Jerome K. Jerome. He has, however, arranged to give a series of matinées of Henry James's piece, "The High Bid," produced a couple of months ago at Edinburgh.

Francis C. Bangs, whose death is announced from Atlantic City, was a sound and useful actor in his day. Born in Virginia about seventy-five years ago, he made his first appearance upon the stage in Washington, and soon became known as a promising novice. In the civil war he fought on the Confederate side. Upon the restoration of peace he returned to the stage, playing William Tell and other parts. He also taught elocution. His reputation, however, rested chiefly upon his Marc Antony, in which character he played, first with Edwin Booth, and later in the revival of "Julius Cæsar," with Davenport as Brutus and Barrett as Cassius. At first his performance was one of conspicuous merit, worthy of association with the fiery and intellectual Cassius of Barrett and the noble Brutus of Davenport; but in course of time it degenerated into an exhibition of mere sound and fury, signifying nothing. Afterward he played with success in "Sardanapalus," "The Silver King," "Michael Strogoff," etc. While his strength endured he was always an effective player in romantic melodrama.

Art.

The Keramic Gallery: Containing Several Hundred Illustrations of Rare, Curious, and Choice Examples of Pottery and Porcelain from the Earliest Times to the Beginning of the Nineteenth Century. By William Chaffers; second edition, revised and edited by H. M. Cundall. New York: Imported by Charles Scribner's Sons. $12.50 net.

How to Collect Continental China. By C. H. Wylde. New York: The Macmillan Co. $2.

Lead Glazed Pottery. Part I.: Common Clays. By Edwin Atlee Barber. New York: Doubleday, Page & Co. 90 cents net.

A well-made and valuable, if somewhat colorless book, which undertakes to cover the entire field of pottery, has been improved, and, in many respects, brought down to date in Mr. Cundall's revised edition. The late William Chaffers came of a family of English potters. He had an encyclopædic mind, which from early youth was directed mainly to study of the keramic arts. The excellences of his chief work, "Marks and Monograms on Pottery and Porcelain," have been freely acknowledged. "The Keramic Gallery" is less monumental, though as a popular presentation it has served a useful purpose. The substitution of admirable half-tone illustrations in place of the specially mounted prints accompanying the earlier volume would justify the new edition even if no changes had been made in the letterpress; and more than one hundred illustrations have been added in the new edition. It is, indeed, primarily a picture book of the achievements of the world's potters down to 1800. Changes in the text, as prepared by Mr. Chaffers, have been made solely in order to correct inaccuracies; and a few additional paragraphs contain material which was not within Mr. Chaffers's scope.

It would be strange if in a book covering so wide a field, a few minor inaccuracies and lacunæ did not still remain. The story, for example, of Böttger's discovery of kaolin in adulterated wig powder is stated as if it were well authenticated fact, instead of belonging, as many writers maintain, with the legendary accounts of Tell and the apple. Again no reference is made to recent discussions of the origin of imitations, discovered in England, of Chinese porcelain, apparently belonging to the Elizabethan era, and possibly made in Great Britain. Fault, possibly, might be found with the technical description of the treatment of clays, as practised at every good pottery. In particular the relationships of "lean" and "fat" earths—as fundamental in the potter's practices as the relations of "warm" and "cool" on the painter's palette—have certainly not been clearly developed.

But the book as a whole is a treasure house of trustworthy information. That from its nature the discussion lacks continuity, that developments in the art are never exhaustively and not always even suggestively followed out, is not, perhaps, to be charged against it; the letterpress of an illustrated "Gallery" is not expected to be a masterpiece of critical exposition. The data, at all events, have not been arranged in accordance with chronological and evolutionary sequences. The chapter on Persian pottery, for instance, has been placed at the very end of the book. Yet on the confines of Persia stanniferous pottery originated, and connection can be traced—as is indicated in another chapter of "The Keramic Gallery"—from the Persian potteries across northern Africa, through the Hispano-Moresque wares to Italy and the rest of Europe. Again, the discussion of Chinese and Japanese potteries and porcelains is singularly scanty and inadequate. In brief, the new edition is more likely to be useful to the collector who wants to know the characteristics and marks of, say, the hard-paste porcelains made in the provincial town of Wallendorf, in Saxe-Coburg, than to the student who desires rightly to relate the development of pottery to the history of civilization.

That details regarding the facture and marking of soft and hard-paste porcelains may be grouped around general truths in a manner illuminating to every-day readers, has been demonstrated in a much less impressive, and less expensive, volume than "The Keramic Gallery." C. H. Wylde's "How to Collect Continental China" is, to be sure, simply a popular monograph, printed on only moderately good paper, though with excellent illustrations on glazed inserts. For the benefit of collectors, it abounds in technical information; whole pages are given up to lists of the principal marks used at Sèvres and other manufacturing centres. Yet, because the description of each type is led up to with a little exposition of the personality and motives of the potters, the book leaves an impression of being readable and entertaining.

The central theme is that European potters in the seventeenth century, through a change of fashion that established a preference for Eastern porcelains rather than the enamelled wares popular up to that time, were compelled either to make some kind of porcelain, or go out of business. The art began in imitation; that it ended by exhibiting admirable qualities which, though delightful in and for themselves, differed radically from the prototype, was the result of no intention on the part of the originators. Wherever porcelain began to be made in Europe, the prime aim was to keep at home some of the money that was being spent upon Oriental products. In succinct narratives, Mr. Wylde describes the adventures and experiments of the founders of the principal European porcelain works—of such men as Böttger and Tschirnhaus, in Germany, and Charles François Hannong, the first maker of hard-paste porcelain in France. The illustrations are mostly groups of museum pieces, admirably selected. The author's hints concerning the detection of forgeries would, if consistently followed, put money into the pockets of many Americans who haunt auction rooms at home and abroad.

Dr. Barber's "Lead Glazed Pottery" is a useful addition to the series of Primers of Art for which the collections of the Pennsylvania Museum and School of Industrial Art afford extensive material. The information regarding the development of sgraffito and slip-decorated wares of European countries has been carefully collated from the accepted authorities. The author's original contribution has undoubted interest. German immigrants late in the seventeenth century started numerous small pot works in Pennsylvania; and Dr. Barber has brought together for the first time entertaining data concerning these early attempts. If pictures had been omitted, an impression might have been left of rather an important fictile art—one comparable with that of making colonial furniture. A few of the tulip decorated dishes, as a matter of fact, are not altogether contemptible as works of art. But many of the illustrations reveal among the colonial potters the crudest draughtsmanship and taste. The worst of these, it should be said, belong to the post-revolutionary period. A sgraffito pie plate, by Johannes Neesz of Tyler's Port, Pa., depicting an impossible George Washington on a horse a little larger than an eohippus, is a particularly horrible example.

The third volume of the "Storia degli Scavi di Roma," by Commendatore Rodolfo Lanciani (Rome: Loescher), carries the history from the accession of Julius III., in

1550, to the death of Pius IV., at the close of 1565. Between the reigns of these two pontiffs fell those of Marcellus II. and of Paul IV. The reign of Marcellus is notable only for its extreme brevity—twenty-two days—and for the fact that he is said to have contemplated the banishment of all music from church services, from which dire possession he was delivered by hearing a mass of Palestrina. The Popes whose names mark the beginning and end of the three lustra covered by Lanciani in the present volume are both noteworthy to the student of Roman topography and archæology. Under Julius III. three great villas and their collections of antiquities were built up—the Villa Giulia, the Villa Mattei, and the Villa Medici. The story of these three undertakings forms the main part of Lanciani's chapter on this reign. He also describes the dispersion of the treasures, overstepping, as in the second volume, the chronological limits of his period in order to avoid a disjointed narrative. The reign of Pius IV. has left its mark all over Rome for the veriest tourist to observe and admire. The many embellishments of the Vatican Palace, the fortifications of the Borgo and of the Castle, the Porte Pia and del Popolo, with the roads leading from them, the restoration of the Acqua Vergine and of the Pantheon, with scores of other important works, have made a lasting impression upon the character of the city. The volume concludes with full indexes, after the general manner of those in the preceding volume, and an interesting appendix on the Roman antiquaries of the sixteenth century.

Under the general title of Studien über christliche Denkmäler, Johannes Ficker is publishing through Dieterich, in Leipzig, an elaborate collection of archæological material from the early Christian church. The fifth and sixth parts, entitled "Kleinasiatische Denkmäler aus Pisidien, Pamphylien, Kappadokien, und Lykien," by Hans Rott, with additions by Dr. K. Michel, L. Messerschmidt and Dr. W. Weber, contain 8 tables, 130 illustrations, and an archæological chart of Asia Minor. The data are mostly the result of special research during the years 1906 and 1907. The four other parts of the series, which have all appeared within the past twelve months, are the following: "Gebet und Bild in frühchristlicher Zeit," by Karl Michel; "Die frühchristliche Darstellungen von der Kreuzigung Christi," by Johannes Reil; "Das geographische Mosaik von Madaba: die älteste Karte des heiligen Landes," by Adolf Jacoby; and "Die christlichen Denkmäler des ersten Jahrtausends in der Schweiz," by S. Guyer.

The house of Wilhelm Weicher of Leipzig has begun, in pamphlet issues, a richly illustrated work, "Die Meister der Malerei und ihre Werke: fünf Jahrhunderte Malkunst in Deutschland, Italien, Spanien, Frankreich, England, und den Niederlanden," by Max Rooses, director of the Museum Plantin Moretus in Antwerp. The author purposes to give a careful account of the development of painting in Europe from the year 1400. The first fasciculus, devoted to the earliest painters of the Netherlands, promises good things. The work is to appear in twelve parts, with nearly five hundred illustrations, and to be completed by the end of the year.

At Christie's, London, May 29, the collections of the late Sir James Knowles and the late Sir Robert Loder were sold. Among the more important items were the following: Watts, The Rider on the White Horse, £273; D. G. Rossetti, Proserpine, £325; Romney, Portrait of a Lady, in white dress, £315; Hoppner, Mrs. Sophia Dawson, in white dress, £997; Mrs. Sarah Dawson, in white dress, £703; William Dawson, in blue coat, £220; Reynolds, Woody Landscape, intersected by a stream of water, £430; Gainsborough, Portrait of the Artist's Daughter (Mary the youngest), £4,777; Portrait of the Artist's Wife (Margaret Burr), £2,782; Lawrence, Heads of Emily and Laura, daughters of C. B. Calmady, Esq., £588; Two Young Children, with fruit in a landscape, £399; A. and L. Le Nain, A Children's Concert, £1,333; Claude Lorraine, The Fishermen and Angler, £671; J. van de Capelle, A Calm, £1,102; J. Ruysdael, The Bleaching-Ground, £987. A Drawing by T. M. Richardson, In the Pass of Glencoe, brought £242.

Finance.

FINANCIAL MARKETS AND NOMINATING CONVENTIONS.

One of the traditions of financial markets is that a Presidential election, in its effect both on general trade and on the stock exchanges, is very unsettling. Immediately before the nominations there is likely to be almost complete suspension of activity on the exchanges. On May 19, transactions on the New York Stock Exchange were 1,400,000 shares, and they followed a series of "million-share days." As recently as June 2, the day's trading nearly touched the million-share mark. Yet on four days of last week, when the Republican Convention was assembling at Chicago, the daily record did not rise above 200,000 shares. On one day it declined to 147,000, and it has continued around that insignificant figure during the present week. This action is by no means without precedent. A few weeks before the nominating convention of 1904, from a million to a million and a quarter of shares were often sold on the New York Exchange; yet in the week before the nomination the daily total dropped to between 200,000 and 240,000. In May, 1900, the average full day's trading ranged from 500,000 to a million shares; but on the eve of the Republican Convention at Philadelphia, in the third week of June, it ran repeatedly as low as 150,000 shares.

On each of these three occasions, the decrease was due unquestionably to the feeling of large investors and speculators that they were facing an uncertainty. True, McKinley's renomination was taken for granted by every one in 1900, and Roosevelt's in 1904. Nevertheless, there remained the chance of a different outcome. Nominating conventions, however docile, are subject to peculiar influences. The financial mind has never quite got over the shock of 1896, when Bryan's florid oratory set the Democratic convention wild, and overturned all previous plans. Apparently, the Republican Convention of this present week had as sure a programme before it as did those of 1900 and 1896, but it was still a mass-meeting in the guise of a nominating convention, and this was still an after-panic year. People who buy stocks in expectation of higher prices, or sell in expectation of lower, have evidently taken counsel of prudence pending actual results, as they did four and eight years ago.

This particular restraint is only temporary. The question of larger interest is, just what effect the campaign itself may be expected to have on trade, and thence on the financial markets. In other words, will the traditions of a dull and reactionary "Presidential year" be fulfilled in 1908, or not? The first point to examine is the real cause of the unsettled markets of previous Presidential years. Were they a result merely of the fact that a change of executive was possible? The possibility of such change means uncertainty as to public policies. Therefore business plans naturally halt. For example, a manufacturer may prefer the lower tariff; but it will make considerable difference to his business plans and arrangements which policy is pursued, and he cannot well make extensive preparations for the longer future until he knows under which he is to work. Uncertainty as to the standard of value, as in the campaign of 1896, and to a less degree in 1900, is even more unsettling; for the verdict at the polls might mean absolute financial confusion. It is not strange that, while such an issue was being fought out, industry should have rested on its oars.

How much of the "Presidential year reaction" has been attributable to these particular causes, and how much to general doubt as to the effect of unseating the party in power, is an open question. General considerations would seem to have been the controlling influence, for example, in the trade hesitation during the campaign of 1880, when neither currency nor tariff was really at issue. That such reaction was almost wholly absent, after the nominations of 1904, may probably be ascribed, not alone to the fact that the currency had ceased to be a point of dispute, but to the country's conviction, from the first, that Mr. Roosevelt's success was assured.

It is at least possible that, as events develop, a similar feeling will arise this year, in spite of the practically uniform precedent, that the party in power during a severe financial panic is unseated in the ensuing Presidential election. Events beyond the control of either party have thus

Life and Letters
of
HERBERT SPENCER

by

David Duncan, D.Sc., LL.D.,

His Literary Executor and Intimate Friend

This work is in no sense an exposition or criticism of the philosophy of evolution, but a narrative of Spencer's life based upon his correspondence. In his will Spencer requested Dr. Duncan to write his biography, and it will therefore be seen that this work is the only authoritative one on his life.

"It will doubtless be generally recognized that the most important book thus far published during the current year, is the Life and Letters of Herbert Spencer."—*New York Sun.*

"Its value lies in its verity, in its point of view, in its frank statements of false as well as sound views of art and literature, of life itself; in short, in its unquestioned sincerity."—*New York Times.*

BOOKS—All out of print books supplied, no matter on what subject; write me, stating books wanted; I can get you any book ever published; when in England, call and inspect my stock of 50,000 rare books. BAKER'S GREAT BOOKSHOP, John Bright St., Birmingham, England.

The Nation.

NEW YORK, THURSDAY, JUNE 25, 1908.

The Week.

It was to New York, not to Mr. Sherman, that the Convention threw the Vice-Presidency. The managers thought it safest to play the old winning combination, Ohio and New York. Hayes and Wheeler, Garfield and Arthur, McKinley and Roosevelt—now Taft and Sherman. The latter has been a plodding Congressman, like any other. Outside his own State, he has been known merely as an excellent parliamentarian. As a practised Chairman of the Committee of the Whole House, he has been an excellent presiding officer; and if the only function of the Vice-President were to be President of the Senate, the choice of Mr. Sherman would be thoroughly justified. But the possibility that he may become President of the United States, seemingly never occurred to the Convention. The work of the Presidency is now a crushing burden; its risk to life obviously great; and the Constitutional successor ought always to be selected with a view to his fitness for the greater office. In that light, not even Mr. Sherman's warmest friends have ever put forth claims in his behalf. To nothing but geography, and the strategy of the campaign against Bryan, does he owe his nomination. It seems also to have been overlooked that Mr. Sherman has one serious drawback. As chairman of the Republican Congressional Committee, he went to Mr. Harriman two years ago to solicit money. His rebuff led to Roosevelt's violent attack upon the man from whom he himself had taken $260,000 in 1904. In a year when the whole question of campaign contributions is to play an unprecedented part in the battle, it was a tactical mistake for the Republicans to put forward a man who will so vividly recall their eagerness to get corporation and "undesirable" funds.

The attempt to reduce the Southern representation in the National Republican Convention has failed again. Representative James F. Burke of Pittsburgh was leader in the fight to equalize the representation of voters in the Convention in which 13,000 Ohio voters had one delegate, while 136 voters in South Carolina had an equal representation. Thus the Southern Republicans wield an influence wholly disproportionate, when one remembers the solidarity with which the South votes for the other side. More than that, these Southern delegates made possible the dictation of Taft's nomination by the President, precisely as their venality made it possible for Hanna and his McKinley syndicate to buy the nomination twelve years ago. It is impossible to pretend with a straight face that the conventions of 1896 or 1908 represented the will of the bulk of the Republican party. Shrewd party managers of the Hitchcock and Hanna types, using money or Federal influence, will often be able to name the Republican nominee months or years in advance of the Convention. But for the Ohio delegates, who were bound, we suppose, to stand by the men who have made Taft's nomination possible, this injustice and source of corruption would have been ended last week.

Senator Lodge's speech at the Convention could not but shine by comparison with that of Senator Burrows. The Massachusetts Senator has always had a literary taint, and makes crisp phrases and insinuating epigrams by second nature. His address as permanent chairman at Chicago reads well—though that, according to Fox, is the most fatal praise that can be given an orator—and evidently went well with his audience. Was it wholly discreet, however, for Mr. Lodge to rub it into the Democrats so hard about their desiring to draw a veil over their past, especially in the matter of their advocacy of silver? In that matter the Senator himself is a "man with a past," and a past that he would give much to forget, or be able to cover up. In April, 1894, when the Wilson tariff was before the Senate, Mr. Lodge moved an amendment of which the confessed object was to force England to abandon the gold standard. His proposal was that discriminating duties should be levied upon British goods until British discrimination against silver should be abandoned. The plan was so petty, and so futile because in plain contravention of existing treaties, that the Massachusetts Senator could get little support for it except from Stewart of Nevada and the Populist Senator from Kansas, Mr. Peffer. But the cultured representative of Massachusetts stuck to it manfully, and declared that he wanted to "strike at English trade" in order to compel Great Britain to change her standard of value. To crown his effrontery, he taunted the Democrats, who had "paraded in large sections of this country as the only friends of silver," with not daring to go as far as he would in behalf of the sacred metal. "Politically," he said, "I should be delighted to see them kill an amendment which looks to a discrimination against England in the interest of silver." And there was no prophet handy to tell the Massachusetts Senator that, fourteen years later, he would be twitting the Democrats with their infatuation over the silver heresy, and be posing himself as its stern and unyielding enemy! As Mr. Lodge was taught at Harvard to say, Oh trumpery, oh morris!

The great "fight" which a free Republican Convention was to make over the platform, oozed away. Comparison of the document as finally adopted with the official and inspired version put out the Tuesday before, shows that the committee asserted its independence only in occasional and minute changes in phraseology. The one exception is the much fought-over anti-injunction plank. Here we find a real departure from the President's form of words. His language was denounced as a "straddle"; the final output of the committee on resolutions is a straddle plus a dodge. The method was to join contradictories together in such a way as to make a nullity. The plank now reads as follows:

> The Republican party will uphold at all times the authority and integrity of the courts, State and Federal, and will ever insist that their powers to enforce their process and to protect life, liberty, and property shall be preserved inviolate. We believe, however, that the rules of procedure in the Federal courts with respect to the issuance of the writ of injunction should be more accurately defined by statute, and that no injunction, or temporary restraining order, should be issued without notice, except where irreparable injury would result from delay, in which case a speedy hearing thereafter should be granted.

Compromise is written all over this, to the extent of making it practically meaningless. If the labor leaders are pleased, or fooled, by it, they are more gullible than we think. The most ignorant of them must know that the qualifying phrase, "except where irreparable injury would result from delay," covers really every case of injunction. Injunctions are asked precisely in order to prevent irreparable injury. The final form of the plank undoubtedly implies a good deal of a retreat by the President; but he and Secretary Taft seem to think that what is left of their original will be sufficient to delude the labor vote. Yet it is they themselves who are deluded, if they think so.

In the original draft of the platform, the "currency plank" also attracted particular attention for several reasons, not least of which was its distinct declaration that the Aldrich-Vreeland emergency currency bill was a temporary makeshift. That hodge-podge of an expiring session, passed only under a threat of holding up the public buildings appropriations, was, to be sure, "especially commended," but it was described as "a temporary enactment, designed to protect the country from a repetition of such stringency only until there can be established a permanent currency system that will avoid all emergencies." The concluding clause had the marks of innocent naïveté, the notion of a currency system which would forever prevent tight money as a sequel of over-speculation being novel, even to optimists in the matter of currency reform. The platform committee struck out the concluding clause; but what was of considerably larger significance, they struck out also the words "temporary enactment" and substituted the word "law." This was plain enough intimation that the real platform-makers regarded the Aldrich-Vreeland patchwork as a good enough currency statute for the banks and the people, and that the further protestations of the platform, regarding the "need" for a system which will meet everybody's wants, stop fluctuation of interest rates, and be "in harmony with Republican doctrine," are mere buncombe. We are likely to hear more of this humbug of the past session in the discussions of the approaching campaign.

By appointing Luke E. Wright as Secretary of War, Mr. Roosevelt expects, undoubtedly, to aid Mr. Taft in the South. That section will be flattered by the admission of an erstwhile Southern Democrat to a Republican Cabinet, and Mr. Roosevelt's great personal popularity in the South will be further increased. But the appointment will not help to soothe those negroes who are disturbed over Mr. Roosevelt's treatment of the race, and condemn Mr. Taft for having lifted no finger in behalf of the soldiers of the Twenty-fifth Infantry. They know that as a successor to Mr. Taft in the Philippines Mr. Wright was far inferior to him, that his Southern prejudices were extended to the Filipinos, and that no one mourned theie when Mr. Wright became the first American Ambassador to Japan. His knowledge of Philippine affairs undoubtedly constitutes a valid reason for Mr. Wright's selection. But the army will sigh for a Secretary chosen with some regard to his fitness for administering the military branch of the service, and will regret the old conditions when the Secretary of War had time for something else besides the affairs of our colonial dependencies.

In resigning the leadership of the Democratic minority in the House of Representatives, John Sharp Williams emits a battle-cry of no particular strength or clarity. His pious hopes for Democratic success in November are contrasted curiously with the vast utterings of Republican confidence at Chicago. "Whether we earn success at the polls next November or not, we have deserved it, and that is all that poor mortals can do. We cannot compel fate." Poor Democratic mortals, Mr. Williams means, of course, since, so far as the other party is concerned, it never has allowed itself to doubt that fate, nature, and nature's God stand ready to obey its behests. As for the Democratic party, so habituated have its leaders grown to moving about in the twilight of discouragement and defeat, that even so good a fighting man as John Sharp Williams, on an occasion that eminently called for a vigorous slogan, can only condition Democratic success on very large "ifs." It may be that the Hon. Champ Clark, upon whom the succession to the leadership falls, will be able to break the spell. Mr. Clark's high spirits are known. He, too, fights well, but he bears the burdens of office more easily than Mr. Williams. He can "convulse" the House. He may perhaps do something to convulse the Democratic party into hopeful activity.

President Roosevelt's injunction to Rudolph Spreckels not to falter in his effort to purify San Francisco politics will, no doubt, hearten the reformers who have been trying vainly to place behind the bars Schmitz, Ruef, and other criminals, large and small. The way the boss and his creatures have slipped through the meshes of the law is enough to discourage anybody. The President is particular, too, to say that the "slander and wicked falsehood" with which Mr. Spreckels and his associates have had to contend are merely the lot of all reformers. He himself has suffered; hence it is with genuine personal sympathy that he calls on Mr. Spreckels "to do the work without flinching, and without losing our good humor and common sense, without becoming angered or losing our heads." The President himself never having berated anybody or lost his temper, or be-adjectived any reactionary, the advice is particularly valuable. It is only fair to say, however, that many of the men and the newspapers that have criticised Mr. Spreckels and his associates have done so from excellent motives, and not in the desire to retard justice or shield the wrongdoers. Unless our observation has misled us, there is a growing feeling in the West that some of the methods of Messrs. Spreckels and Heney were as high-handed as those of the grafters they have run to cover. Meanwhile, it would be interesting to know what Schmitz would say to this latest letter of the man who entertained him in the White House when he was already under indictment.

After years of investigation and months of legal battling, a conviction has been secured from a District of Columbia jury of two out of four defendants charged with defrauding the government out of valuable public lands in Oregon and Washington. It was necessary to bring the trial to the capital because in the West the prevailing sentiment has made conviction of land and timber thieves almost impossible. We have repeatedly spoken of this moral blindness on the part of an entire section of the country to a species of transgression whose great excuse is the frequency with which it is practised. The President's efforts at introducing a stricter enforcement of the public land and forest reserve laws have been received with piteous outcries by the "interests" who would maintain that in the bounteous West you can make a living only by illegal fencing or fraudulent occupation. Congress has not risen up to the support of the President's policy of public-land defence. The same conditions that result in pulling to the surface hosts of prominent citizens wherever the investigator's drag-net goes, and in making punishment by the courts extremely uncertain, have placed the Congressional management of our land and forest policy in the hand of committees overwhelmingly Western. Of the Senate Committee on Public Lands two out of fifteen members are from east of the Mississippi; of the House Committee the ratio is seven out of twenty. The verdict of the Washington jury comes as encouragement when encouragement in a good cause is greatly needed.

The killing of a marine on the battleship Mississippi by a professional prize-fighter is the second or third "accident" of this kind in the navy within the last two years. In the previous instances, the "boxing matches" were between sailors; this time civilian talent was asked on board to make things interesting for the crew. We shall be told, of course, that such incidents are bound to happen in the search for the strenuous which is necessary to toughen men. But the question will not down, why such brutal prize-fights should be permitted on board of our men-of-war. About every State in the Union prohibits them as contrary to public order and morals, and as a result the prize-fighter goes about his business after the manner of the midnight burglar, and is always in fear of arrest. The one place where he is welcomed with open arms and where men are openly encouraged to follow in his footsteps is the navy. Why not devote a couple of our battleships to this sport altogether, if it is so desirable? They could be anchored off this city or Philadelphia or San Francisco, and the sporting fraternity would contribute liberally to their upkeep.

If President Eliot could be conceived

of as having been waiting for an opportunity to reply to the author of the "mollycoddle" and "milksop" speech on Harvard athletics, delivered a year ago last February, one can imagine him putting special zest into his correspondence with Mr. Roosevelt about the suspended oarsmen. Mr. Eliot almost seems to have drawn upon the President's own vocabulary. There is a familiar ring to these two sentences:

> A keen and sure sense of honor being the finest result of college life, I think the college and graduates should condemn effectually dishonorable conduct. The college should also teach that one must never do scurvy things in the supposed interest of or for the pleasure of others.

When that was read by Mr. Roosevelt, he must have known the sensations of the eagle pierced by an arrow feathered from his own wings. He should have remembered that only last year at Harvard he declared it "mere nonsense" to do anything to limit intercollegiate contests, since they alone kept alive the love of athletics, while "athletics tend to develop moral courage no less than physical—the courage that dares as well as endures, the courage that will fight valiantly against the foes of the soul." The idea that an athlete could do anything except "in honorable and manly fashion," was unthinkable to Mr. Roosevelt. This was, of course, simple ignorance or credulity, on his part. Those actually in touch with what has gone on in the college athletic world have seen too many examples of deceit, trickery, cheating, and the general demoralization bred by the overmastering desire to win.

It may be true, as some philosophers maintain, that modern scientific discoveries have not raised the average of human happiness, but it is undeniable that they preserve and lengthen human life. The bacteriologist who traces the source of a deadly disease to a microscopic organism and thus facilitates its prevention, may seem a less heroic figure than a fireman who rescues women and children from a building in flames, but he may save thousands where the fireman saves one. At the same time, he can only suggest preventive measures; it remains for the community to carry them out; and often the ignorance or carelessness of individuals frustrates all the good work of the scientist and the health board. Contaminated milk, for example, kills so many infants, especially during the summer months. In some cities, even the poor now have an opportunity to secure pure milk, but, unfortunately, it does not remain pure, being exposed to the visits of flies which infect it with the germs of divers diseases. The belief is still current that milk is particularly dangerous to infants when it has turned sour; but this is true only when sourness implies age and contamination. Pure sour milk is now regarded as not only harmless, but remedial, in intestinal disorders. The fly is the offender; on it we must wage a war of extermination if we would save infant lives; and mothers must be taught that our common houseflies are as dangerous as the tigers and snakes of the Indian jungles.

The outcome of the latest British bye-election will come as a sharp reminder to the Liberal party that, in spite of the encouraging result of the last two Scotch elections, the long winter of their discontent is by no means over. Pudsey, in the West Riding of Yorkshire, after going Liberal in January, 1906, by a majority of 3,502, was captured by a Conservative on Saturday, though by the narrow margin of 113. Parliamentary majorities, like everything that lives, begin to die as soon as they are born, and bye-elections in Great Britain have come to be looked upon as corresponding to the physical deterioration of advancing age. But it is the rate of degeneration that counts, and in this respect the government has had sufficient occasion for worry and puzzled reflection. Is it still the fear of Socialism that is lashing on the British electorate towards Chamberlainism? The government's old-age pension bill is one which admittedly the Opposition would have soon been forced to take up, and therefore does not put the country in greater peril of Socialism than would be the case under a Conservative government. Is it the fear of Home Rule? With that question agreement has been reached by the Liberal leaders that the present Parliament cannot deal. And there rests the anomaly that a government with an elaborate programme of popular reforms finds the country going against it. The Education bill, now under discussion, is regarded as the nearest approach to a pacific settlement that has yet been offered. The Irish Universities bill has been accepted by the Opposition. David Lloyd-George's Patents bill and Port of London bill have been enormously popular. Sir Edward Grey conducts foreign affairs in a way that gets praise from Liberals and Conservatives alike —and an old Liberal constituency which held true in the dark years of 1892, 1895, and 1900, and piled up a great majority in 1906, goes over sharply to the other side.

The final voting for the Prussian Diet shows that the Conservatives have gained eleven seats and the Centre nine, while the National Liberals have lost twelve and the Free Conservatives four. Since the Conservatives now have 152 and the Centre 105, for all practical purposes, the Diet is unchanged. But the Liberals and the Radicals of all sections feel deeply chagrined that they have not only made no progress, but have actually lost ground. That the Socialists have obtained a representation of six pleases that wing of the Radicals which believes in an alliance with the Left. The Liberal press has been quick to say that this is a deserved rebuke to their party for permitting itself to be as clay in Von Bülow's hands. Two of the Liberal seats won by the Socialists are in Berlin, in a highly intelligent portion of the city, and this gives an added touch of bitterness to the cup. Not even the wrongs of the unfair indirect suffrage were properly utilized by the Liberals in their campaign. The effect of their Reichstag alliance with the Conservatives seems to have had a paralyzing effect upon them, as must all such compromises with principle. As for their deadly enemies, the Centre and the Agrarians, they are stronger than ever, and more than ever ready to favor reactionary measures and the granting of special privileges. Only the fact that the Socialists have entered the Diet and the hated Poles have captured two more seats, despite their proscription by the government, can detract from the satisfaction of the classes in control.

In adopting the government bill for double-tracking the Siberian Railway, the Russian Duma has merely sanctioned the completion of the original projectors' plans. The matter, however, became important only with the outbreak of the war against Japan. It has ever since been busily discussed. The excellent record made by the Siberian single-tracked road during the war is a matter of common knowledge. What a doubled line could do in that second war with Japan which many in Russia hope for, and many fear, seems to the former class obvious. One track supplied Gen. Kuropatkin with 900,000 men and equipment. Two tracks might recover Manchuria. But the military argument is not the only one that can be adduced. Eastern Siberia, if it is to be held for Russia, must be planted with colonists from Europe. There is not merely the remote danger of a second Japanese advance, but the actual pressure of a steady Chinese immigration from the south which is threatening a peaceful reconquest of the territory once Mongolian. In European Russia overcrowding must be combated by emigration, so that the need exists at both ends of the 6,520 miles of rail from St. Petersburg to Vladivostok. Russia's readiness to assume the enormous cost of construction indicates that the Czar's subjects, like other peoples, have confidence in their future. It throws, too, a rather strong light upon the lavish predictions of national bankruptcy in which Russians and foreigners alike have been fond of indulging.

THE WORK BEFORE MR. TAFT.

Mr. Taft's equipment for the Presidency, all fair-minded men admit. The winning charm of his personality, no one who has met him can fail to have perceived. He is a hard worker, with a great range. No public man has more thoroughly "looked over the plant," as we have heard one business man express it. Compared with Mr. Bryan, he is steadiness itself. His private life is irreproachable. Yet all these qualifications may go for nothing in a Presidential year like this, unless there be added to them a firm sagacity and an unyielding independence and courage in meeting the great issues.

The chief task now laid upon Secretary Taft is to emerge. For two years his personality has been lost in another's. In 1906, he said in an important speech in Maine: "Speaking, not for the Administration, but for myself." Since then he has not spoken for himself. He has had no voice or wish which was not the Administration's. The big, resolute, forceful man, has let himself be led like a child by Theodore Roosevelt.

That this complete suppression and submission have irked the Secretary has been well known to his friends. He has given in to the attitude of being another man's man, as a disagreeable political necessity. When told that his position was one of much embarrassment and even humiliation, he himself has said: "I know, but I have got to stand it." His distinct implication was, of course, that when the time came, the people would find him standing upon his own feet, thinking his own thoughts, going his own way. That is what the country now looks to him to do. Are we to get back again the Taft that we knew before he put himself into the hands of Roosevelt to be made President? Two years ago, everybody would have said that Mr. Taft would be certain to prove the most plain-spoken and independent of Presidential candidates. He had bearded and defeated Boss Cox. He had told the severe truth to Southern Republicans. He had declared for immediate revision of the tariff. Could it possibly be expected that this man would cling to his seat in the Cabinet, accept the patronizing of his chief, and in every way make himself the shadow of another? The mournful judgment of the Roman historian—*nisi imperasset*—must have occurred to many of Secretary Taft's friends; if he had not done it, all of them would have said that he was incapable of doing it.

We speak of this only to show how imperative it now is that Mr. Taft should assert himself as his own master. He needs to do it, first of all, in order to allay if possible the immense resentment at the way in which his nomination was brought about. Let no friend of his be deceived on this point. Americans do not like to see a Convention coerced. They are not pleased at the unscrupulous use of Federal patronage, and of official threats, to force a candidate upon a party. And in spite of all the jokes which a good-natured people make about it, they do not approve of delegates turned into puppets moved by wires from the White House. They will smile at it, but in their hearts they resent it, when the President issues his glorification of himself as the sole author of Taft's nomination, like another Creator looking upon his work and pronouncing it very good!

This is the initial difficulty which Mr. Taft must apply himself to overcome. From being an echo, he must become an original voice. It is highly probable—indeed, given the nature of Mr. Roosevelt, it is almost certain—that the attempt will be made to run the campaign from Oyster Bay and the White House. Mr. Taft cannot permit that with either self-respect or safety. It is one thing to round up delegates; it is another to dragoon millions of voters. Persuasion has got to do the work of electing a President; and the readiest way in which Mr. Taft can persuade the people is to go to them in his own name and convince them that he means to make himself henceforth the lord of his own fate.

There will be especial reason this year for such a virile display of the personality of the candidate. The outlook is confused. Party lines are badly broken. Labels and names are going to count for less than ever, leadership for more. The platform will go for little compared with the man who stands upon it and interprets it. Who can read the balanced commonplaces, the calculated non-committal, of the Chicago platform, and not feel that it requires to be supplemented by the vigorous declarations of the nominee? The anti-injunction plank, as it stands, is a meaningless mush. It is for Judge Taft to make clear his own position. The promise of free trade with the Philippines is hedged about "with such limitation as to sugar and tobacco as will avoid injury to domestic interests." Will Secretary Taft, one of whose titles to distinction is that he has long fought for a free market for our Filipino wards, permit such a sneaking withholding, while pretending to give? The question will be put to him in the campaign, and a positive answer will be necessary. So there will be in many other matters upon which the platform is studiously vague. The tariff plank may mean anything or nothing. But Mr. Taft is able to make his tariff policy perfectly explicit, and should do so. On the question of the rights of the negro, the platform is not nearly so definite as was that of 1904, much less direct than was the Ohio State platform this year. But the matter will be critical in the campaign, and Mr. Taft will make it plain whither his abolitionist inheritance and his love of justice and fair play will carry him.

TACT IN RULING RACES.

In some respects, the situation of England in India to-day resembles that of the United States in the Philippines. John Morley—"Lord," in his case, does not yet come trippingly on the tongue—in a speech to the members of the Indian Civil Service the other day, put the matter tersely and correctly. He said that there was an undeniable "estrangement" between an alien government and the native populations. What were the causes of it? The main one was "a living movement in the mind of the people of India," with which Englishmen had not yet learned how fully to sympathize and skilfully to deal. Thousands of Hindus are now educated, and they have ideas and aspirations which it is the business of the government to satisfy. And unless order can be reconciled with that satisfaction, "the fault," said the Secretary of State for India, "will not be theirs. It will be ours. It will mark the breakdown of British statesmanship."

Comparison of this attitude of the man responsible for the government of India with that of Americans charged with the duty of administering the Philippines, is not one to heighten our patriotic pride. Take, for example, last Friday's action of the Philippine Assembly, in voting before adjournment that nothing but independence would satisfy the national desires, and that it ought to be granted quickly. In this, too, we see a "living movement in the mind of the people"; and it is also a movement, as Mr. Morley said of the agitation in India, "for objects which we ourselves have all taught them to think desirable objects." Yet what is the stand of the American authorities in face of this significant manifestation? It is one of incredulity and contempt. Governor-General Smith at once takes to telegraphing that the resolution of the Philippine Assembly amounts to nothing; that the natives do not know what they are talking about; that it is ridiculous to speak of their being fit for independence, and that the whole movement may safely be ignored. In a word, our official attitude is that of "pure repression," which Lord Morley declared to be simply impossible for liberty-loving Englishmen.

John Bull may love liberty, but he shares with Brother Jonathan the distinction of belonging to what has been called "the worst-mannered race on the face of the earth that has been summoned, in the providence of God, to have rule over the best-mannered peoples in the world." Tact in bearing and graciousness in speech count enormously in removing friction between a ruling and a subject race; but they are almost the last things an Englishman or an American thinks to be necessary. More than forty years ago Cobden thought it an ominous sign that English officials in India usually referred to the natives as "niggers." That word is as common in the Philippines as it is in the South. Complaints of overbearing insolence by the ruling class come also from Egypt. An Englishwoman who has lived there for many years recently wrote to a newspaper at home:

> We are hated! loathed!—and no wonder. The French and Germans, on the contrary, get on all right with them. A native told a friend of mine whose German name deceived him, that they will sell their cotton cheaper to a German—to any one rather than at a better price to an Englishman. I wish something could be done. I wish educated English men and women would realize that to be courteous is just as much a duty as to be honest. This sounds exaggerated, but I really believe rudeness rouses more hatred and bitterness than good honest cheating.

Lord Cromer dwells in his book upon this defect in Englishmen. After doing for the natives all that they knew how, in their blunt, awkward, and supercilious way, the only result was to find themselves thoroughly disliked; while the Egyptians would clasp to their bosoms the first Frenchman that came along. One trouble is that John Bull is no linguist. Like our own Governors-General in Cuba and the Philippines, he thinks it beneath his dignity to learn a foreign tongue. And he is as amazed and indignant as an American to find that foreigners cannot address him in his own beloved English. A recent street scene in Cairo illustrates the point. An old resident of the city writes:

> I met a friend one day in the bazaar at Cairo, who had been unhorsed, or rather unassed, and who, to the amusement of a crowd of donkey-boys who had gathered, was ejaculating in fury. "Where's the police? You beastly fellows! Why don't you talk a language I can understand? Where's the police?"

It is a time-worn moral. If manners maketh man, certainly manners maketh a governor of subject races. Well-settled political convictions and sound principles of government are essential in planning any protectorate or form of superior control, but almost as important—in practice, often more important—is tact. Thoroughly to understand the native, and then to enter sympathetically into his life and even his dreams, is the beginning of wisdom for ruling races.

THE LUXURY OF HATRED.

> Although at peace with all the world, and secure in the consciousness that the American people do not desire and will not provoke a war with any other country, we nevertheless declare our unalterable devotion to a policy that will keep this republic ready at all times to defend her traditional doctrines, and assure her an appropriate part in promoting permanent tranquillity among the nations.

This sentence from the Republican "plank" on the army and navy is as meaningless as it was intended to be. Anybody can subscribe to it, though sober and pacific persons cannot subscribe to President Roosevelt's policy of a big fighting force on land and sea. The question, of course, is how many soldiers and ships we need in order to protect ourselves and promote permanent tranquillity among the nations.

The real issue is raised in a few pregnant words in an interview with Herr von Holstein recently printed by the Paris *Matin:* "Hatred between nations is a luxury, the cost of which is incalculable." Herr von Holstein wielded for many years an enormous influence over the external policy of Germany, and his long experience in the German Foreign Office enables him to speak with authority. It is therefore significant that he looks forward to a time when hatred will be put an end to as a useless expense. His plain implication is that hatred between nations is ethically on the same footing as hatred between persons, and similar in results. Nearly one hundred and forty years ago Burke eloquently argued that those principles of morality which apply to the individual apply also to men in the mass—to political parties and to whole peoples. The notion has made but slow headway. It is only within a few decades that a considerable public opinion has come to support the view that for fifty or for one hundred thousand men to kill their fellows, except in self-defence, is as unjustifiable as unprovoked murder committed by the individual. This is the idea that underlay President Wilson's baccalaureate sermon at Princeton, in which he maintained that the so-called corporate conscience is, in last analysis, a group of individual consciences; and that the respectable gentlemen who lie and steal for the sake of a corporation belong in the general category with other liars and thieves. It is equally true that the men who hate the Germans and the Japanese, and who try to make political capital by declaiming against the foreigner and stirring up enmity, and who adopt the manners of the bully toward weaker peoples, are no whit better than the men who hate their neighbors in the same street and bully their poor relations.

And most of our loud talk about readiness to defend ourselves is nothing but a reflection of that sheer, blind distrust of the foreigner which is characteristic of ignorance and chauvinism. For example, the argument for four battleships, urged upon Congress in its last session, was not supported by detailed evidence and reasoning. There is never any such analysis of our naval expenditure as any well-conducted business house would demand from its executive officers. It would be interesting to see our experts, from the President down, divide the items of the naval appropriation bill into two headings:

> 1. That which is essential to national safety.
>
> 2. That which is not.

Then under each item we should like to see the clear proof that this particular hundred thousand dollars—or million—is a necessity; that to refuse to vote it will really imperil our standing; that four new battleships are imperative, rather than three, or two, or one. Of course, we can scatter vessels all over the earth, put one in every port; but where is it vital to our interests to maintain a battleship, where a cruiser? How large a fleet must we actually have in the Philippines, within easy reach of Panama, along the Atlantic seaboard, or in the Mediterranean? These questions must be capable of a rational answer. It is not enough to reply with a sweeping generalization about "preparedness." That really begs the question. If preparedness means anything, it means a definite number of vessels of definite kinds, definitely distributed, with regard to certain definite dangers.

But once we attempt to translate the frantic clamor for a big navy into such concrete terms, we perceive the emptiness of the whole pretence. People are asked to pour out their millions in response to the silly watchword of our "fighting" admirals that what we want is fewer statesmen and more battleships; in response to somebody's vague, unuttered, and unutterable suspicions about the sinister designs of Japan or Germany or Great Britain; in response to absurd appeals to the war spirit. The agitation is an attempt, not to convince the intellect, but to play upon the emotions—and those, too, far from the highest. In fine, the military mania is in essence a mania of hatred; and of all hatreds it is the costliest. Herr von Holstein had before his eyes the spectacle of Europe groaning under its armaments, and Germany in particular facing huge deficits. But expenditures for which Germany and England have some excuse are sheer waste for us. We are relatively free from the entanglements that vex European Powers. Our position makes it almost inconceivable that any nation should attack us unless we provoke it beyond endurance. Why, then, should we think it necessary to continue in our policy of rivalling the navies of the Old World? Such a course is at bottom a manifestation of hatred, and of a hatred the cost of which, in money alone, is incalculable.

THE REALLY ACADEMIC.

It would be an interesting Teufelsdröckhian speculation to consider the causes of the increasing vogue of the academic cap and gown. Only a few weeks ago, Ambassador Bryce commented on the matter at the College of the City of New York. Forty years ago, he said, this formal garb was absolutely unknown here, apart from the judges on the Supreme Bench. Much more recently than that, the clothes-philosopher might have beheld the graduating class saying farewell to alma mater in the modern abomination of full dress and stove-pipe hat. Now in many a college, East and West, he would see under broad-spreading trees a long and stately procession—gray-haired trustees golden-tasselled, as gorgeous as kings, the corps of instruction radiant with the colors of American and European universities and their several faculties, the white masters of arts, the full black cohorts of the bachelors—moving rhythmically across the grass to slow music. How suggestive of the marching ages, of tradition, of the solemn linking of the future to the past! But what, the philosophic observer would inquire, is the relation of these new clothes to the wearers? What is the spirit of innovation? Is it economy, fashion, peacock pride? Or has some inner change come over the gamin and scapegrace spirit of the students, as over the prose and practicality of the elders, corresponding to this outward change in splendor and state?

It is possible that this reversion to academic dress foretokens a general reaction against the over-secularization of our seats of learning. The days of the cloister and of detachment from mundane affairs seem very remote. No one is likely to speak of Harvard or Michigan or Dartmouth or Chicago as a "home of lost causes" or a "queen of romance." Schooled into a painful dread of unworldliness, they now meet the world more than half way. The retiring, unpractical scholar, nourishing impossible dreams, is becoming a thing of the past. The modern scholar inspects mines, advises corporations and Cabinet ministers, reforms spelling, improves steel rails, and perfects the breed of cattle. The State universities, often developing around a farm and carpenter shop, have most completely broken down the barrier between the academic and the secular. Directly dependent upon the State for support, they are constantly reminded that they must not live unto themselves, but unto the immediate needs of the people. Their fundamental principle of honoring every truth by use has doubtless been wholesome and invigorating.

Yet something of the finer spirit of the old college life has been lost through the more intimate contact with the world. There are cloistral virtues as well as cloistral vices; some of the choicest elements of liberal culture thrive only in a certain academic isolation and tranquillity. As W. B. Yeats says, "Two conditions are essential to the making of a poet, multitude and solitude." If a man passes with a sensible shock from the atmosphere of the college to the atmosphere of the world, and *vice versa*, he learns much both ways. He is constrained to test the world by the college, and the college by the world. Nothing is more severely educative than the necessity of confronting sharply distinct ideals and standards, and choosing among them. When the college was a comparatively isolated colony, it was better able to simplify the problems of life and to compel reflection upon fundamentals. It was better able to embody and suggest those old-fashioned graces of culture which, in spite of all the tedious chatter to the contrary, can never be taught—can only be suggested and exemplified. It was better able to preserve its store of fine traditions, to insist upon its own stately ways of thought, its academic dignity of action.

We are all too apt to undervalue the academic virtues, and to the undergraduate the most distasteful of all things is ceremony. But it is also the most subtly formative, invisibly carving the moral lineaments gross or fine. A beautiful and elevated chapel service, a decorous university assembly, a commencement oration choice in diction and lofty in tone, the procession, with its venerable pomp—how much these things have heightened his love for a "hieratic order and beauty in the conduct of life," the student learns in his later shocks of revulsion at the theatrical or unrestrained manner and the vulgar bearing and language of many a popular orator and preacher. It would be impossible to forget the address on the death of a favorite pupil delivered by an old classical professor who had read his Sophocles and Lucretius for fifty years—its deep feeling, eloquently expressed, yet moulded and subdued by the austerity of his character and his august bearing toward death and the mystery. It was sternly beautiful and nobly consolatory. It dignified the dead youth and purged the emotions of the audience with something of the effect attributed by the ancients to tragedy. That was the true academic, in the presence of which ribald tongues and hearts hold their peace, disciplining their souls by silence. We ought to rescue a fine word and fine idea from degradation: the father of all the academics was Socrates, praying under the plane trees: "O Pan, and all ye gods that haunt this place, give me beauty in the inward man!"

CHRISTIAN SCIENCE AND THE EMMANUEL MOVEMENT.

One of the most interesting phenomena of our time is the rapid growth of the Christian Science cult in the United States, from which it is now spreading to foreign climes. Closely allied as it is to other systems of belief—such, for instance, as Faith Cure, Mental Healing, Metaphysical Healing, New Thought, etc.—it is distinguished from them all by its material success, by the large number of its devotees, and especially by the fact that, while these other cults have in common with it a basis in a misconceived idealism, it surpasses them all in the absurdities of doctrine taught by Mrs. Eddy.

> The first reading of her chief work, "Science and Health With a Key to the Scriptures," leaves the impression, in spite of much that is strikingly beautiful and true, that there is a prevailing tone of incoherence, contradiction, illogicality, and arbitrary, dictatorial assertion, with no regard for evident fact either in the realm of objective nature or of history.

Had this sentence been written by a hostile critic it would appear to be a fairly strong expression of disapproval. It is found, however, in "The Interpretation of Life" (p. 700), by G. C. Mars,* who is a reverent follower of Mrs. Eddy; and it may therefore be accepted as an acknowledgment of the doctrinal weaknesses above spoken of. The ready acceptance of the teachings of Mrs. Eddy by educated, intelligent, and even talented men and women will surely be looked upon by our descendants as a valuable commentary upon the quality of our intellectual development. In this connection Mr. Mars's work is interesting; for it is virtually an apologetic of nearly 800 closely-printed pages which he tells us is "the fruit of more than twenty years of reading, observation, and thought." The book deserves attention mainly because it will, without doubt, be hailed by the Christian Scientist as an adequate reply to all hostile criticism. Mr. Mars covers the realm of science and philosophy, enters into a detailed exposition of the Kantian and post-Kantian metaphysics, and deals lightly with an enormous number of problems which, though of the greatest significance, have little logical relation with his final outcome—that in Mrs. Eddy's teachings we have (p. 761) "the most significant and comprehensive interpretation which has yet been put upon life."

It is easy to consider this movement in a coldly critical spirit, to impugn the motives of the leaders, and to look with disdain upon the logical weaknesses of those who follow; but if we are not entirely devoid of human sympathy, we must regard the matter from quite another point of view. Here are immense numbers of men and women, whom we meet in the ordinary affairs of life without questioning their keenness of intelligence, who nevertheless follow teachings which imply logical blindness and uncritical unintelligence. They cannot act thus without what are to them sufficient reasons. One of the strong forces which lead men to Christian Science is strongly exemplified by Mr. Mars: viz., the relief from effort to think clearly; the joy of being admitted to a mystic communion in which people are taught to say with Mr. Mars in his closing sentence:

---

* *The Interpretation of Life*: in Which Is Shown the Relation of Modern Culture to Christian Science. By Gerhardt C. Mars. New York: D. Appleton & Co. $3 net.

> He who would know whether or not Christian Science is true, can never determine it by the measure of a discursive logic or an academic criticism. But giving himself up to his deepest intellectual insight and highest ethical volitions, he must *think* it, *feel* it, and *will* it; and then he will find himself dropping the illusions of his material existence, and entering into the spiritual realities of a new heaven and a new earth.

This particular attraction is, however, offered by many other mystical cults, and we are therefore compelled to look further for the special cause of the spread of Christian Science. This is apparently the fact that faith in these doctrines carries with it for many people great physical benefits which they have come to believe cannot be gained in any other manner. It may be, as will be indicated later on, that we are not far from being able to present a thoroughly rational doctrine which will account for the curative effects above referred to; but until such a doctrine is presented in a form that can be comprehended by those of average education, we must not complain if men and women are willing, like the martyr on the rack, to agree to accept any kind of doctrine, and to deny any and all of reason's dictates, if they believe that by so doing, and only by so doing, they are able to check tortures they are enduring.

The fact that this new teaching is taking many from the long-established churches, coupled with the undoubted successes its devotees have had in the treatment of disease, has led certain of the clergy to study it with mingled alarm and sympathy. If we may judge by the contents of a book* which the publishers announce as "official," the clergy of the Emmanuel Church in Boston are moved by both of these emotions. On the one hand, they fear for the future of the established churches unless they follow in pathways closely parallel with those trodden by Mrs. Eddy's followers, while, on the other hand, they are convinced that the methods of Christian Science in the cure of diseases of certain types are singularly effective. According to the statement on page 1, the object is "to describe in plain terms the work in behalf of nervous sufferers which has been undertaken in Emmanuel Church, Boston." Dr. Worcester tells us (p. 13) that "this movement bears no relation to Christian Science, either by way of protest or of imitation." This statement must be taken as an honest opinion, but it is difficult to believe, as he goes on to say, that the movement "would be what it is had the latter [Christian Science] never existed." In any event, it is clear that the cures effected by Christian Scientists and the Emmanuel Church clergy result from methods of essentially the same nature. It is clear also that both agree that religious emotions and conceptions have a notable effect on disease; and the Christian Scientists will probably hold Dr. Worcester's assertion that he would lead us "back to Jesus" to be but a restatement of the teaching of Mrs. Eddy. It is true that the views of the Emmanuel Church workers seem much more intelligible than those expressed by Mrs. Eddy, who, according to our authors, "interprets Scripture in a way that excites the scholar's disgust" (p. 300); but, in this respect, these critics themselves cannot be said to be beyond censure, and it is improbable that Mrs. Eddy's disciples will acknowledge that our authors have made an advance; rather are they likely to maintain that all that is valuable in the Emmanuel movement is directly copied from their own tenets and practice.

The authors urge, however, one marked difference between their doctrine and Christian Science, in that such medical treatment as they advocate is taken under the advice of skilled physicians. In this they profess to go back to the habit of the Apostolic Fathers.

This consultation with physicians is the more important because the Emmanuel healers decline to treat organic nervous troubles and limit themselves to the cure of what they describe as functional nervous diseases. Our authors further argue that the mind has direct power over the body and that there exists in each of us a "sub-conscious mind" which is "a normal part of our spiritual nature" (p. 42), but which is "purer, more sensitive to good and evil than our conscious mind," and which "has more direct control of our physical processes than the conscious." They then attempt to show that by suggestion and auto-suggestion this powerful sub-conscious mind is able to react favorably upon the nerves. The use of hypnotism is not in general recommended, but certain forms of suggestion are deemed most effective when presented to the "sub-conscious mind" in the hypnotic trance.

Dr. Worcester and Dr. McComb further maintain (p. 293) that "faith simply as a psychical process or mental attitude . . . has healing virtue," and that (p. 294) "the more deeply personality is involved in any given ailment, the more necessary is it that faith should have an object worthy of men's ethical dignity"; *i. e.*, that this faith should be directed toward God. Hence the value of the association of religion with psychotherapy. It is held (p. 312) that without question "the prayer of faith has an immense influence over the functions of organic life," and (p. 316) that "when we pray long and earnestly for the moral and physical welfare of another, our soul not only acts on that soul, but our prayer rising in the mind of God directs his will more powerfully and constantly to the soul for which we pray." This, in brief, is the argument of the book so far as it is an attempt to place upon a rational basis these therapeutic practices.

The authors, to be sure, dwell upon certain matters which do not evidently relate to the doctrines as above stated. They recognize, for instance, the individuality of the physician as a factor of the highest importance (p. 263); and when they teach us that "morbid thoughts can be driven out only by other and healthy ones" (p. 272), they are enunciating a rule which has been followed for many centuries not only by doctors and clergymen but by all sane advisers of wide experience. The final chapters are devoted to an interpretation of "The Healing Wonders of Christ," whom the writers look upon as setting an example which they follow; and to a discussion of the "Outlook of the Church," of which the thesis is that the Church to-day "is not bringing the whole force of the Christian religion to bear upon the lives of the people" (p. 371); that we must go "back to Jesus" and try to live again His life in all its fulness. Here the implication is that unless the Christian Church makes itself the guardian of physical as well as moral health, it will not only fail of its mission, but will lose all its influence.

No one will deny that much suffering may be alleviated and certain cures effected through treatment by suggestion, a treatment which is used by many physicians openly, and by many others without recognition of the nature of the process. It is not surprising then to read of the success of the devoted clergymen and doctors who have joined in the clinical work at Emmanuel Church. Every one will wish them a continuation of this success, which probably has been in no small degree due to the fact that neurasthenic patients are likely to be timid souls who stand in awe of the ordinary physician, a fallible man speaking for himself, but who yield their confidence to the priest whom they look upon as the representative of an all-wise, all-loving, and all-powerful Father.

We cannot, however, concede that religion is dependent for its persistence upon any such collateral physical benefit, and it is very doubtful whether many thoughtful Christians will agree that Christ's healing of the sick was of the very essence of his message to humanity. To suggest that our clergymen must become doctors of the body if the influence of Christianity is to be maintained is a cry of despair which ill becomes one who holds firmly to the faith professed by the writers of this book. No doubt confidence in the medical adviser is essential to the success of such treatment as is here described, and in certain cases doubtless such confidence is most readily attained in connection with religious teaching. This fact might lead properly to closer relations between doctor and clergyman, and a greater willingness on the part of the clergyman to trust the trained expert. But if we may judge by comparison of the present with the past, the functions of the priest and of the physician are likely to become more and more distinct with the development of specialization.

As already stated, the authors offer an explanation of the process of effecting cures through religious influences which is much more rational than the theories of Christian Scientists, Faith Curists, Metaphysical Healers, and the like, yet the book still leaves much to be desired in this particular. One finds at times too ready an acceptance of current notions, and at times not a little vagueness of conception. It is not obvious that a sharp line can be drawn between organic and functional disorders, whether nervous or other. Nor is it clear that the words "nervous" and "nervousness" are used with accuracy. And when we turn from the physical to the psychic side we find equal vagueness and even certain contradictions. The word "spiritual" is constantly employed as though it referred to a special substance within us distinct from the body and mind (p. 390, last lines), or even distinct from the body and soul (p. 379). Dr. Worcester and Dr. McComb state (p. 315) that telepathy "is regarded by many sane and sober men as, if not actually proved, at least exceedingly probable," and base upon this supposed fact their explanation of the influence exerted by prayer upon the "mind of God"; yet in another connection Dr. Worcester scouts (p. 65) the notion of "telepathic bond between the operator and every subject he attempts to treat" as a "baseless assumption."

---

* *Religion and Medicine.* The Moral Control of Nervous Disorders. By Elwood Worcester, D.D., Samuel McComb, D.D., and Isador H. Coriat, M.D. Pp. 416. New York: Moffat, Yard & Co. $1.50 net.

If we now turn to the main theses, we discover that the first step involves a number of assumptions that cannot be taken for granted. No competent psychologist will hesitate to agree that each individual has a "sub-conscious mind" provided we mean by this term what may better be described as sub-attentive consciousness, that is, mental activity of an individual which exists without "awareness"; without the individual's appreciation of its existence. This, in fact, is all that the term "sub-conscious mind" can properly mean. But it certainly would be difficult to prove that the "sub-conscious mind" as thus considered "has more direct control of our physical processes than the conscious," and "is purer, more sensitive to good and evil than our conscious mind."

The great weakness of our authors' explanations and arguments, however, is rooted in their fundamental assumption that the mind has control over the body in certain directions and is powerless in others. The Christian Scientist is theoretically more consistent in maintaining that the mind's power is exerted over the whole realm of our bodily activities. While opponents of this cult are able to disprove any such wide extension of the mind's power, they in turn leave us with the highly unsatisfactory notion of the common man who holds the relation between mind and body to be purely haphazard and lawless. This is so formidable a difficulty that it seems worth while to note that it is avoided by the adoption of another hypothesis which also aids us greatly in our comprehension of the relation of therapeutic influences to our mental states. This hypothesis, which is now held by a large proportion of our leading psychologists, is what is known as the theory of "parallelism," the theory of correspondence between changes in the activities of nerve and changes in mental states. According to this theory in its thoroughgoing form, each change in the nervous system on the physical side is accompanied on the mental side by a coincident change in the psychic system which we call consciousness, and vice-versa. The relation between mental state and bodily state is thus looked upon as one of coincidence, or correspondence, or concomitance. Thus we are not forced to assume the existence of any causal interaction between mind and body whatever; for the facts may be equally well explained by assuming that such causal relations as exist are quite within the physical series, or within the mental series respectively. As Clifford put it, we say, "A feeling of chill made a man run." We have here two parallel series, one mental, the other physical. "Sometimes one series is known better and sometimes the other; so that in telling a story we speak sometimes of mental and sometimes of material facts." When we say, "A feeling of chill made a man run," we should say, strictly speaking:

> The nervous disturbance which coexisted with that feeling of chill made him run, if we want to talk about material facts; or the feeling of chill produced the form of sub-consciousness which coexists with the motion of legs, if we want to talk about mental facts.

The importance of this consideration appears when we consider that if it is adopted we are compelled to restate the facts with which our authors deal, and in so doing we find an explanation of the phenomena here considered in terms closely related to our more ordinary conceptions. Thus we should say that what our authors call the "sub-conscious mind," but what we describe as the sub-attentive consciousness, is the psychic correspondent of unemphatic activities in many nerve parts, while clear consciousness is the psychic correspondent of emphatic activities in certain nerve parts the location of which is more or less known to us. If this be true, then with a change in the form of this sub-attentive consciousness, a change must at the same time occur in the form of the corresponding unemphatic activities of nerve; just as it happens that if the clear consciousness is changed, a simultaneous change must occur in the emphatic activities in the special nerve parts spoken of. If, then, suggestion yields an emphasis of certain ideas in clear consciousness, as it does in every movement of our waking lives, there must at the same time exist an emphasis of the activities of certain nerve parts. Furthermore, if we have evidence, which we seem to have, that suggestion can also effect changes in our sub-attentive consciousness ("sub-conscious mind"), then it must be that when these sub-attentive mental changes take place some changes must also occur in the unemphatic activities of the nerve parts which correspond with the "sub-conscious mind." It is to be noted that the changes of nerve activity which thus occur, whether accompanied by clear consciousness or not, may under certain conditions result in benefit to the whole system of nerves.

Turning to the efficiency of auto-suggestion, we may note in the first place that the definition of it (p. 93) is practically a definition of voluntary action, that is, "a self-imposed narrowing of the field of consciousness to one idea, by holding a given thought in the mental focus, to the exclusion of all other thoughts." The "practical hints" as to auto-suggestion (pp. 105 and 106) amount to injunctions to retire into the realms of undisturbed reflection and then to emphasize voluntarily the series of thoughts which seem likely to bring the fullest benefit. We are thus led to see that we are here dealing with the so-called power of the will over our bodily activities in general and especially over those which are related with morbid functioning. In this connection it is worth our while to remind ourselves that the best of psychologists since Locke have agreed that there exists within us no will entity that acts; that what we describe as "the will" is a concept built up out of material given in our experience of willing or choice, *i. e.*, of the rejection of one and the welcome of another of two incompatible ideas.

Now it is true that in certain cases where we are dealing with series in which acts of choice enter, we, as Clifford says, sometimes know the mental series better than the corresponding physical series. We experience that mental state which we describe as an act of choice, say, to go to the right rather than to the left; but do not think of the physical change of nerve activity which accompanies this mental act. Following this mental experience of choice, we note certain changes in muscular action resulting in our turning to the right. We then speak of the mental act of choice as having caused the physical change in bodily action. But under the view here considered, if the causal relation is to be spoken of, it seems more proper to say that the physical change of nerve condition coincident with this mental act of choice caused the physical (muscular) changes resulting in the turning to the right.

If then we accept this hypothesis it would appear that the efficiency of will, and of auto-suggestion in relation to disease, may be explained as follows: If you can induce the persistence of a notion in attention you have at the same time also induced a more or less permanent condition of nerve activity which must tend to modify future conditions of nerve activity, and these modifications may be in the direction of the reëstablishment of unbalanced conditions. Thus, if a person "wills" the disappearance of a pain he "wills" the replacement of the painful mental state by some other that is not painful. To his mental act of will there corresponds a physical change of nerve activity; and if the pain disappears after the act of will, it is because the alterations of nerve activity accompanying this act of will actually bring into existence a new physical condition to which corresponds the new and non-painful mental state. Now we have much reason to believe that painful mental states correspond with inefficient activities in nerve, and the displacement of painful mental states by others that are not painful therefore means that inefficient nerve activities are displaced by other and more efficient activities. The physical parts whose activities were inefficient (to which corresponded the mental painfulness) are thus brought to a condition of relative quiescence which is a condition favorable to recuperation. If, therefore, there be no serious lesion, the replacement of the painfulness may well be accompanied by repair of the nerve parts affected, which will therefore be in future less liable to display recurrence of the previous morbid condition and its corresponding painful mental state.

The physician in fact has always at his command two types of symptoms, one the patient's physical condition as objectively viewed, the other the corresponding mental condition of the patient as it is communicated to him. In some cases the physical condition alone is emphatic enough to attract attention, although the patient may be unable to distinguish the corresponding mental condition which we know must exist: thus a change in the nature of the "knee jerk" may indicate to a psychiatrist a morbid condition of which his patient has no psychic indication. There are other cases where there is no physical indication of diseased nerve tissue, which, however, the skilled diagnostician feels certain will be found because of certain morbid psychic states of which his patient tells him. We are thus led to see that without dependence upon the doubtful hypotheses suggested in the book before us we may treat a vast proportion of the cases dealt with by our authors, using suggestion, and auto-suggestion, and hypnotism, if need be, to bring into existence desirable changes of mental state, realizing that we cannot bring about this result without at the same time changing the conditions of nerve activity in the patient, and that these changes may be followed by more or less fundamental alterations of physical condition, to which will correspond alterations in the nature of the patient's personality.

Question may well be raised, however, whether any large proportion of the cases treated successfully by the Emmanuel Church or Christian Science methods would be benefited if the patients looked upon the matter somewhat as we have just done, or if they saw any other explanation of the phenomena which might appear more logical and less open to objection than ours. In other words, we are led to ask how far these cures are dependent upon the appeal to the mysterious, to the miraculous. The fact that they are effected as well by the Christian Scientist, as by the saner and more reasonable Emmanuel workers seems to indicate that it is the method that counts and not the substance of the connected beliefs. Nevertheless, any one who has had much experience with the frailties of human nature must be convinced that not a few of the patients whose illnesses are alleviated would not be thus benefited unless they felt that they were under supernatural influences. And this raises the broader question whether it is folly to teach wisdom where ignorance is bliss. Those who believe that the attainment of pleasure or the avoidance of pain is of highest significance in this world will tell us that it were better to accept even necromancy than to lose the opportunity to relieve human suffering. There are those, on the other hand, who feel that there are other more important ends than the hedonistic, that the greatest nobility of character cannot be gained so long as men fail to face the facts of life as they understand them, that in the long run it will be to the advantage of the race to risk the continuance of some suffering among weaklings whom the arts of magic alone can relieve, rather than to curtail the development of clear thinking and rational activity among the common people.

H. R. M.

NEWS FOR BIBLIOPHILES.

A New England book of great rarity as well as historical importance is Winslow's "Good Newes from New-England: or a true relation of things very remarkable at the Plantation of Plimoth in New-England, Printed by I. D. for William Bladen and John Bellamie, 1624." The title-page was twice printed, the earlier form having twenty-five lines only. Later in the year a new title was printed containing two additional lines above the imprint: "Whereunto is added by him a briefe Relation of a credible intelligence of the present estate of Virginia." This "briefe Relation" made an additional leaf, with the signature mark ")(2" and was bound at the end. Although this leaf properly belongs in copies of the second issue only, it is sometimes found in copies of the first. Justin Winsor was apparently uncertain about the variations, and in his "Earliest Printed Sources of New England History," says that the book was issued "possibly in two issues" in 1624. He was able to locate copies in the British Museum, Lenox, Boston Public (Thomas Prince's copy), the Massachusetts Historical Society, and John Carter Brown libraries. The Deane copy noted by him, and which brought $800 at Libbie's in March, 1898, is now in the Pequot library in Southport, Conn. The copy once in the Harvard Library has, according to Winsor, disappeared. Yale University and the Library Company of Philadelphia also possess copies, and another is in the Ayer library in Chicago. There are copies in at least two private collections in this city, one being the Sheffield copy, doubtless the finest in existence, as it is uncut at side and bottom. The title-page is of the earliest form, but the additional leaf relating to Virginia is at the end. It brought £250 only at the Sheffield sale on November 5 last, but from the catalogue description it would have been supposed to be of the second issue, and no mention was made that it was an uncut copy. The Ashburnham copy, which brought £240 in 1900 (and which is also now in New York) was of the second issue.

The Florence Press Books is the title of a new series to be printed in a special "Florence" type designed by Herbert P. Horne. The "trial impression" is to be a reprint of the earliest known guide-book to Florence, "Memoriale di molte statue e pitture, sono inclyta cipta di Florentia," published in 1510. The "first Florence Press Book" will be "The Fioretti, or Little Flowers of S. Francis." This is a newly revised version of Professor Arnold's translation, and will contain collotype reproductions of twenty-five contemporary drawings by an unknown hand, which are found in a manuscript preserved in the Laurentian library. Chaucer's "Romaunt of the Rose" will be the second book. The edition of each of the above three books will be 500 copies on paper, and ten copies on vellum. The books are to be published for the Florence Press by Chatto and Windus. A few years ago there were hundreds of collectors of "special press" books, some, it is true, subscribing solely with the idea of selling the books when prices had sufficiently advanced. All of the earlier issues of the Vale Press, the Essex House Press, and the Elston Press (not to mention the Roycroft Press), were subscribed for before publication, and prices immediately advanced. But, with a few exceptions, they are now far below the subscription price, and when bought are not bought as special press books, but for their reading matter, apparently. It will be interesting to see whether this new series will receive adequate support.

In a catalogue recently issued by Sotheran & Co. of London, they offer the autograph manuscript three pages, folio, of Robert Burns's "The Twa Herds," which Burns himself said was "the first of my poetical productions that saw the light." The same catalogue describes a series of forty-seven letters of Walter Savage Landor, addressed to Mrs. Lynn Linton, and eighteen letters of Swinburne also addressed to Mrs. Linton, and mainly referring to Landor.

Among the books sold by Messrs. Hodgson from the libraries of H. H. Dobree, the late Dr. Rutherford, and others were: Boccaccio's "Le Décameron," 5 vols., £51; Parkinson's "Paradise," 1629, £15; Montaigne's "Essays" (slightly defective), 1603, £14; Ackermann's "Microcosm of London," 3 vols., £13; "The Roadster's Album," colored plates by Newhouse, £46.

Correspondence.

A DEFECT IN THE "CAMBRIDGE HISTORY OF ENGLISH LITERATURE."

To the Editor of The Nation:

Sir: I beg to call the attention of those of your readers who purchase volume II. of the "Cambridge History of English Literature" to the character of the Chaucer bibliography appended to it at pages 514-527. This list is of necessity condensed and selected; but it is a selection which pays no heed to the intrinsic value of the monographs mentioned, and which does not group together the titles of works now superseded and of the papers which displace them. Under the head of Translations, room might have been found for the principal modernizers and translators of Chaucer, had the bibliography been pruned of errors and repetitions.

More than this, misstatements which Furnivall and Skeat have done their best to correct begin in this volume a new lease of life. Nicolas again appears as an editor of Chaucer, owing to the printing of his life of the poet with various collections of the poems; and Tyrwhitt also becomes editor of the Poetical Works, thanks to the deceptive title of the 1843 Chaucer, on which his name was used. The compiler of the Cambridge bibliography deduces from the 1843 edition a connection between it and Tyrwhitt's Chaucer-work (the "Canterbury Tales" only) of 1775-8; he accordingly creates for Tyrwhitt a "ghost-edition" of the Works, to which he assigns the date 1775-8, and multiplies the falsification by adding "Last edition, 1843."

The construction of the bibliography from catalogues and indexes is evident. It is to be regretted that the great "Cambridge Literature" should lend its sanction not only to the regeneration of old error, but to the creation of new.

Eleanor P. Hammond.

Chicago, June 13.

COMMERCIALISM AND THE GRADUATE SCHOOL.

To the Editor of The Nation:

Sir: The charges brought against the graduate school by Dr. Stuart P. Sherman in your issue of May 14 are too sweeping and too picturesquely expressed to be quite true. The facts are not, I think, quite so startling as Dr. Sherman's version of them. Dr. Sherman seems to have been generalizing from insufficient data—to be specific, from his observation of conditions at Harvard a few years ago. He is not quite fair even to the Harvard of that day; and since then conditions have improved. Knowing him to be a Harvard man, one might suppose from his letter that no advanced courses in literature were offered in the Harvard Graduate School. On the contrary, I am glad to bear witness from my own experience that a man may spend two or three years at Harvard in the profitable and delightful study of literature, and that he will find there admirable courses of exactly the sort which Dr. Sherman desiderates. To be sure, he must pay the price; he will probably not be able to write after his name the magical letters which are the open sesame to professorships in certain colleges and universities. But is the price so great? That man cares little for the study of literature who rates it lower than the doctor's degree. Dr. Sherman's attack, I think, was directed at the wrong place. He might more justly have attacked the materialistic spirit of men who prefer the Ph.D. to the study of literature; or he might have exposed the still popular fallacy that the degree is a certificate of training for teachers.

The situation of a young man who goes to Harvard intending to study English literature as a preparation for teaching is briefly this. He is confronted by a large number of courses in philology and in literature, some of the latter being "snap" courses, and some of them being thorough and admirable. He is advised to take courses chiefly literary during the first year. At the beginning of the second year he comes to a fork in the road. He finds that most of his fellows who have spent a year or more in study look forward to the doctor's degree as the crown of their earthly ambition. If he decides to become a candidate for the degree, he is practically compelled to devote the second and third years largely to courses in philology, and to "original research." He may if he pleases choose a literary subject for his thesis; but he finds his task much harder than that of the student who chooses a purely philological subject. The doctor's degree, that is, has generally been thought of as standing primarily for "scientific" work.

On the other hand our student finds that a number of most inviting literary courses are open to him—courses in drama, in composition, in comparative literature. These courses he believes will be stimulating, perhaps inspiring, at any rate invaluable to a teacher of literature. But no tag with magic letters on it awaits him at the end, and strong influences are brought to bear to keep him out of these literary courses and to herd him into the courses in philology.

The consequence is that some of the best and most thorough literary courses number scarcely four or five students, while perhaps thirty able-minded men may be found reading the Song of Roland at the rate of three or four lines a day and tracing the etymology of every word on strictly scientific principles. The literary courses are there, but they do not lie on the shortest road to material success. The "exceeding high mountain" from the summit of which "the kingdoms of the world and the glory of them" are visible, is there; but if any one is surprised that so few care to climb it, let him remember that in those regions no bread is to be had except by miracle, and that butter is not even hinted at. The saying "man shall not live by bread alone" thus proves susceptible of a new interpretation, suited to our prosperous "American ideals."

It is written that no man can serve two masters; and certainly the average student cannot in three years acquire a decent knowledge of even the most essential parts of English literature, and at the same time complete the work prescribed at Harvard for the doctor's degree. True, it is customary for the fledgling doctors, when their theses are finished, to spend a few weeks "cramming literature" from such convenient manuals as Stopford Brooke's little primer. But this second-hand knowledge is full of pitfalls. It did not save Dr. Sherman's acquaintances, for instance, from wondering what Dryden thought of Rousseau, or from telling their pupils that "Burke was an ardent advocate of the French Revolution."

The fact is that the work for the degree is regarded by many students as a necessary evil, which must be encountered in order to "get a start" in teaching. The degree has a certain market value, and is sought by many chiefly for this reason. A professor of English (Ph.D., Harvard) recently assured me that his work for the degree had been absolutely useless to him in teaching. Perhaps he overstated the case a little for the sake of picturesqueness. But if the degree administered at Harvard is to be regarded as a certificate of training for teachers, there is evidently something wrong with it. The difficulty may be partly remedied by the new degree in comparative literature. There is something wrong too, I cannot help thinking, with students who are willing to sacrifice preparation necessary for good work in their profession in order to "get a start." It is safe to say that even if Esau had never been tempted to sell his birthright, he would have been no great credit to the family.

HOMER E. WOODBRIDGE.

Colorado Springs, June 1.

NODDING HOMER.

TO THE EDITOR OF THE NATION:

SIR: Col. Theodore A. Dodge in his critical history of Napoleon, speaking of the French army, said that it was not a parade army, but a fighting machine. Referring to the parade of the army of the Potomac and the Western armies at the close of the civil war, he adds:

> Among all the troops the world has seen, it is doubtful whether one hundred thousand men could have been collected from any source equal for intelligence and all around soldierly qualities combined, to the one hundred thousand that might have been chosen from the men who passed before Abraham Lincoln on those two days' National Review.—Vol. II., p. 321.

Rhodes's History, Vol. V., p. 141, states that Mr. Lincoln died April 15, 1865, and that the review in question took place May 23-24, 1865, or about six weeks after Mr. Lincoln's decease. Is not this an illustration of the fact that occasionally Homer nods?

ISAAC L. MILLER.

Plainfield, N. J., June 18.

Notes.

The Index for the current volume of the *Nation* will be printed with the issue of July 9.

On Saturday of this week Dodd, Mead & Co. will publish a volume of William H. Taft's speeches, under the title of "Present-Day Problems."

The next issue of the Cambridge English Classics (G. P. Putnam's Sons) will be the second volume of Samuel Butler's works, and will contain, besides miscellaneous reflections from his note books, the hitherto unprinted "Characters," from a manuscript in the British Museum.

A pamphlet, written by Prof. L. S. Rowe of the University of Pennsylvania, and published by the American Association for International Conciliation, announces a tentative plan for coöperation among the universities of North and South America. It is proposed to establish a foreign students' information bureau, and a scientific bureau, to serve as a centre of information, and means of communication among the workers in any particular field. The scheme has already received the endorsement of three of the leading South American institutions: the National University of La Plata, the National University of Chili, and the University of San Marcos, at Lima. The last-named is the oldest university in this hemisphere, having been founded in 1551, eighty-five years before Harvard.

The University of Oviedo, Spain, will celebrate its three hundredth anniversary September 20-30. One of the ceremonies will be the unveiling of the statue of the founder, Fernando Valdes y Salas, Archbishop of Seville. There will be excursions to celebrated places in the neighborhood, a pedagogical exhibition, lectures, and sessions of various societies.

The manuscripts of Edmondo de Amicis in the possession of his family have been given by his son, Ugo de Amicis, to the city of Turin.

The fourth Universal Congress on the Esperanto Language will meet at Dresden, August 16-22. The second triennial International Conference on the Blind will be held at Manchester, England, July 27 to August 1. It is proposed to hold an international congress on instruction in domestic economy and home industries, at Fribourg, Switzerland, September 29 and 30.

The Accademia dei Lincei has announced this year's award of the three royal prizes of $2 000 each. Prof. Angelo Batteli of Pisa is given the prize in physics for a long series of investigations of the action of liquids, osmatic pressure, and oscillatory discharges. To the author of "Annali dell'Islam," Leone Caetani, Prince di Teano of Rome, is given the prize in history, while that in classic, Christian, or mediæval archæology is divided equally between G. T. Rivoira, the author of "Origine dell' architettura lombarda" (See the *Nation* of February 20, 1908, p. 180), and Prof. Adolfo Venturi of Rome, for his recently completed "Storia dell' Arte Italiana" (See the *Nation* of November 7, 1907, p. 429).

"Motor Days in England," by John M.

Dillon (G. P. Putnam's Sons), is a beautifully printed and illustrated account of a trip through the southwestern part of England—as far east as London and as far north as Leamington. Some of the pictures are half-tone reproductions of photographs. The more attractive illustrations, however, are from drawings by the author, who. through a lawyer, exhibits a feeling and skill that professional artists often fail to attain. Several of the sketches of buildings at Oxford are especially to be commended. There is a map of the route, a table of distances, and a whole chapter of practical suggestions. Otherwise the text is rather slight. Mr. Dillon has read widely and appreciatively; and the literary and historical associations are always uppermost in his mind. His remarks on these subjects, however, are rather obvious, his quotations familiar.

The third volume, "Jacobean to Victorian," completes "The Oxford Treasury of English Literature," compiled by G. E. and W. H. Hadow. To embrace the writers of three centuries within the covers of a single moderate volume means that only the leading names can find a place, and that the number of extracts from each must be very small. Even such a man as Southey must be left unrepresented, with the excuse that "his poetry is like Bayard's horse, which 'had every virtue and only one defect, namely, that it was dead.' " We think the case might be made a little better than that for the scribe of Greta Hall; "Thalaba" is not quite dead. But, in general, the brief critical remarks in the introductions are well-balanced despite their extreme brevity and occasional wit. If the sarcastic quality of Thackeray's prose is dwelt on to the exclusion of his sentiment and pathetic brooding on the insufficiency of life; and if no just discrimination is made between the childish and the sublime in Wordsworth—these are but the excesses we must expect in any critics who come to their subject with romantic prejudices. As a compensation they speak more fairly of Dryden and Pope than is commonly done in these days. In the selections they keep pretty well to the beaten path, as indeed they should in a work intended "for students who are beginning a general course of English Literature." The Clarendon Press has printed and bound the volumes in its usual attractive manner.

"Farm—Cottage, Camp, and Canoe in Maritime Canada," by Arthur P. Silver (London: George Routledge & Sons), would seem at first blush to be something of an advertising puff of the province of Nova Scotia, though, in view of that country's undoubted advantages both to the sportsman and the gentleman farmer, a legitimate one. The book, which is better printed than bound, is made up of a rather heterogeneous collection of papers on husbandry, angling, and hunting. The many illustrations are of varying excellence, but they serve to give the reader a good idea of the character of the Maritime Provinces and Newfoundland. A number of minor mistakes might be noted, such as the statement that it is *sine qua non* that the horn with which the moose is lured by the "caller" shall be made of the bark of the *yellow* birch. The volume has no index. Mr. Silver, an excellent sportsman, unfortunately died before his book was finally revised.

"From Pekin to Sikkim" (E. P. Dutton & Co.), by Count de Lesdain, is the account of his unique wedding journey, the bride being nineteen, "undertaken to gratify our wish to cross country hitherto unknown, and, if possible, to increase the geographical knowledge of our day." With this object, they went from Peking to Mongolia, and thence through Tibet to India, being the first Europeans, he asserts, to cross the forbidden land from north to south. Almost inconceivable hardships were endured from the nature of the country traversed (largely deserts), from the inefficiency of their caravan people, and from the torrid heat and arctic cold, one of their camps being at the height of 19,300 feet. Though the monotony of the desert is felt in the narrative, which is largely taken up with trivial details, it gives a vivid picture of life and conditions in little known parts of the empire. The general impression left is discouraging, especially as respects evidence of the increase of the opium habit. Of Ning-hsia the capital of an ancient kingdom, he says: "Opium has largely killed this city, all of whose inhabitants indulge in this drug." On the other hand, the indications of great but undeveloped natural wealth, both agricultural and mineral, are numerous. Among the noteworthy incidents of the journey was the discovery of the jealously guarded tomb of Jenghis Khan. It consisted of two small tents, in one of which was a chest with handles containing the ashes of the body, "a fit emblem of the eternal migration of one who overran so many countries when alive, and even after his death has not found rest." Relatively little space is given to the crossing of Tibet, the chief impression left by the narrative being that "here we fell in with the worst enemy—the irresistible, clinging, ubiquitous, invidious enemy—mud!" The count seems to have made scientific observations throughout his journey, but there are few references to his purely geographic investigations, or their results. A map enables the reader to trace the route, and there are thirty-two reproductions of photographs, some of scenes of great beauty.

Between the Southern leaders, who believed slavery all good—a blessing and an interest to be protected and extended at all hazards—and the Northern leaders, who took just the opposite attitude, Douglas studiously searched for a middle course, so as to evade the question. As he himself confessed, he did not care whether slavery was voted up or voted down; and, as Lincoln said, he endeavored to prevent the voters from caring. He is the most conspicuous illustration of how a politician can be both powerful and successful and yet ignore the fact that there is a great moral sense among the people. It was because of this obliviousness to morality in politics that the late Carl Schurz used to call him "my pet aversion." James Ford Rhodes made an earnest but not altogether successful effort to give the "Little Giant" historical respectability. And evidently Prof. Allen Johnson, in his "Stephen A. Douglas: A Study in American Politics" (The Macmillan Co.), started with the hope of finding something like a hero; but as the author advanced, he fully mastered the subject and the period, and his sober judgment controlled. Without ceasing to be susceptible to Douglas's best qualities, he has not been able to reach favorable conclusions. He furnishes us the fullest and most vivid picture of Douglas's remarkable, almost terrible, powers as a debater. These powers were not in the strength of logic, but in skill as a sophist, as an artful juggler with words and phrases and the deceptive use of emphasis. With absolute self-control, thorough knowledge of all the main facts, and a very superior literary finish, Professor Johnson gradually lets us see that Douglas's greatness was as a politician who can win support and exert political influence for personal or party purposes, and that he was nearer being a great demagogue than a great statesman. And, on the whole, Professor Johnson has made good his sub-title, for he has produced "a study in American politics" that has all the life and realism of a moving picture in which Douglas is the most conspicuous figure.

The third edition of Scargill-Bird's "Guide to the Public Record Office, London," has been so far rearranged and rewritten as to constitute practically a new work. The former editions (1891, 1896) may, therefore, be regarded as antiquated and not worth buying even at second hand. The movement which has been going forward in the last decade, looking to a more scientific grouping of the records, is responsible for this result, and its good effects are manifest on almost every page of the present work. The most conspicuous change is the substitution for the former alphabetical arrangement of subjects of a grouping under the heads of the several courts or offices from which the records emanated, while the separation consequent thereon of records relating to a particular subject has been counteracted by means of a carefully prepared index. Though many paragraphs of the former editions remain untouched the changes are so complete as to leave scarcely a page unrevised, while the new material in preface, text, and appendices has added nearly sixty pages to the work. Students of Ameriican colonial history, familiar with the former arrangement of the state papers and departmental records, will need to study carefully the new system, particularly as far as it relates to the War Office, Colonial Office, and Home Office; for in these groups the reclassification is a thorough one. When lists and indexes of these collections, now in preparation, are printed, and when the guide in process of compilation, under the auspices of the Carnegie Institution of Washington, is issued, the material in the Record Office relating to our history can be easily determined beforehand by any one desiring to visit that repository.

When a book has been on our table for some time, and has been found serviceable in daily use, it is only common justice to recommend the work to others. In his "Guide bibliographique de la littérature française" Hugo P. Thieme (of the University of Michigan) has made a valuable reference book for the period from 1800 to 1906. In the first part the authors are arranged alphabetically. The dates and places of birth and death (if dead) of each author are given; then a list of his publications, with format, date, and publisher of first edition; and last, references to his work and critiques from some 270 journals. In a second part there is a bibliography by subjects. The work does not pretend to be complete, but the number of authors included is so great as to render it sufficient for any ordinary demands. (Published by H. Welter, Paris.)

The Crown Theological Library now includes a translation of Adolf Harnack's "Sprüche Jesu" ("The Sayings of Jesus," translated by J. R. Wilkinson; G. P. Putnam's Sons), which was noted in these columns on its appearance in 1906. It is not a popular treatise, or a discussion of the teachings of Christ, but a minute critical study of the discourses which are common to the first and third Gospels, but which are not found in Mark. These discourses are now held by many scholars to have been derived from an earlier document, which disappeared when it was embodied in the gospels we now have. This document is called Q, and its restoration furnishes the earliest authority on the life and teachings of Jesus. Professor Harnack endeavors to restore this document, by careful comparison of Matthew and Luke. He submits the text to thorough examination, and records his conclusions as to the grammar and style, as well as the historical and religious point of view, of this earliest Christian writing. The work is an important one for critical study of New Testament literature and the life of Christ.

Principal Alfred E. Garvie's "Studies in the Inner Life of Jesus" (A. C. Armstrong & Son) leaves somewhat the impression of a student's note-book. The preparation of the volume extended over many years, and a large number of articles and discourses have been embodied—all of which may account in part for the repetitions, the frequent recurrence to the same themes, and the frequent long quotations. The author has been engaged upon a vast and difficult subject, and he has recorded at length the views he has considered and his criticisms upon them, rather than brought into clear and consistent statement his judgment of the matter in hand. His purpose is to study the mind, heart, and will of Jesus, as portrayed in the Gospels. He does not share the feeling that it is unseemly to try to penetrate to the mystery of the inner life of Jesus, but complains that "an exaggerated importance is attached to a knowledge of contemporary custom and costume," and that "enough has been written about the scenery, the upholstery, and drapery of the life of Jesus." Dr. Garvie's conclusions are conservative.

The three hundred and fiftieth anniversary of the University of Jena is to be celebrated on July 31 and August 1 by the dedication of the new university building.

"Schwänke aller Welt für Jung und Alt," by Oskar Dähnhardt (Leipzig: Teubner), is a rich collection of international popular humor, even Eastern Asia and Africa being represented. The work is illustrated by fifty-two characteristic drawings by Alvis Kolk.

"Die Schriften des neuen Testament," by Johannes Weiss, a condensed commentary for the general student along strictly modern lines, has proved so acceptable that the publishers, Vandenhoeck & Ruprecht, of Göttingen, announce a corresponding work entitled "Schriften des alten Testament," which is to include, however, for the present, only the leading books. Two volumes, one by Prof. Hermann Gunkel and a second by Prof. Bruno Baentsch are to appear early in 1909.

The Boersenverein der deutschen Buchhändler has just issued from Leipzig its report of the book publications of Germany for 1907. The total is 30,073, an increase of 4.77 per cent. over the preceding twelvemonth, when the number was 28,703. In 1901 the output was 25,331; in 1902, 26,906; in 1903, 27,606; in 1904, 28,378; in 1905, 28,886.

Governmental statistics for Prussia show that the number of high schools for girls under state and municipal control has in the last five years increased from 213 to 270; the number of pupils from 53,000 to 71,000. The number of male teachers in these schools is now 1,238, an increase of only 179 in these five years; while the number of women teachers is 1,920, an increase of 656. In addition to these public high schools for girls, Prussia reports 675 private schools of this character, with an attendance of 85,000.

The death is reported of the Rev. Joseph Woodfall Ebsworth at an advanced age. Mr. Ebsworth was a special student of ballad literature, contributing much on that subject to *Notes and Queries*, and publishing a number of books. Among his works may be noted "Karl's Legacy," "Westminster Drolleries," "Bagford Ballads," "Bagford Poems," "Three Centuries of Molash Annals: Burial Registers," "Roxburghe Ballads," "Sempill Ballads," and "Robin Hood Ballads."

From Copenhagen comes the news of the death of Prof. V. M. Fausbóll in his eighty-eighth year. He was one of the pioneers in the study of Pali, the language in which the southern Buddhist scriptures are preserved, and as early as 1855 published his great work on the Jâtaka.

BIELSCHOWSKY'S LIFE OF GOETHE.

**The Life of Goethe.* By Albert Bielschowsky; authorized translation from the German, by William A. Cooper. Volume III.: 1815-1832, from the Congress of Vienna to the Poet's Death. New York: G. P. Putnam's Sons. $3.50 net.

It is doubtless inevitable that the biography of a great man who passed the middle of his eighty-third year should induce in the reader's mind a touch of lassitude. Especially is this true of a Goethe, who started out with such superabundance of dæmonic energy, of hopeful aggressiveness. When we read of the Frankfort days, of Leipzig, Strassburg, Wetzlar, of Weimar and its youthful duke, even of the Italian Journey and the Revolutionary period, we echo involuntarily Wordsworth's sentiment, "to be young was very heaven," itself an echo of "Hermann and Dorothea." But this story of a slow decline, a story in which impulse has given place to reflection, hope to memory and regret, is necessarily a story of shortening days and falling leaves, and all the other premonitions of a winter of discontent.

To this general inevitableness must be added the special fatality of Bielschowsky's premature death. Had our author lived to complete his work, the *pièce de résistance* at least of the present volume would have been by one hand, the chapter on "Faust" would have been composed in all probability in a tone to harmonize the young Goethe and the old, and make us realize to the full how that extraordinary poem is a lifelong diary and confession. As the case stands, we have twenty-five pages by Bielschowsky and eighty-seven by Theobald Ziegler. With the work of the Strassburg professor in itself we have no quarrel; as an independent essay upon the Faust poem it is scholarly, sober, helpful, and in the main sympathetic. Still, it is not quite in the tone of Bielschowsky, nor does it bring out to the full the parallelism between the poem and the life of the poet.

Of the poem it is scarcely our province to speak; "Faust," like the Iliad, the Odyssey, and the "Divina Commedia," is a literature by itself. We must content ourselves with submitting a few suggestions. Too much stress is laid upon the fact that the poem is not an artistic unit. Did Goethe ever intend it to be such? Does not Ziegler go too far in the judgment, p. 356:

> Whoever considers the style of the First Part beautiful cannot be pleased with the pompous, often intricate [involved?] style of the Second Part. And one who likes the latter cannot possibly have a right appreciation of the strength and simple beauty, the matchless sturdiness and purely human tenderness, of the former.

One "Faust" interpreter, assuredly, who knew his "Faust" as few have known it—we mean Bayard Taylor—enjoyed and appreciated to the full every word in both parts. We fail to see wherein lies the insuperable difficulty of enjoying both parts; not, of course, every situation and line, but the two parts as complements to each other. For they are reflexes of the younger and the elder Goethe. Another feature of the "Faust" is grievously overlooked. The poem, apart from the Gretchen story, is a *satire:* in the First Part a fairly direct satire, in the Second a cleverly veiled satire. If we have only the courage to cut out the Gretchen-story, placing it by itself as "probably the greatest masterpiece of poetry ever written," p. 288, *only not an integral part of the real Faust-story*, we shall find it quite possible to enjoy the rest of the First Part and all the Second Part as an unequalled satire of life from the point of view of the philosopher. Being thus a satire, the poem is exempt from the artistic rules or principles which govern the usual drama or epic. Hence the frequent neglect of "motivation" and method. Evidently the poet felt that he was not under obligation to make his situations and the actions of his characters more than superficially plausible; he merely asks us to accept his utterances for their general availability. In treating the character of Mephistopheles, Ziegler regards Merck, the friend of Goethe's youth, as having sat for the original. This is the customary interpretation, and up to a certain point is not to be rejected. It is a question, however, whether the interpretation does not do Merck overmuch honor. Merck had talent, but was not a genius of high order; he was far from possessing the boldness and unerring instinct which mark the spirit of eternal negation. It was a favorite idea of Bayard Taylor, though not expressed in the notes to his translation, that Goethe got the most characteristic traits of Mephistopheles from his teacher Herder. The idea is well worth careful investigation. Certainly Herder had the genius which was lacking in Merck.

---

* Reviews of previous volumes were printed in the *Nation* of May 24, 1906, p. 430; and December 19, 1907, p. 569.

The present volume offers at least one chapter, by Bielschowsky, which presents Goethe both in youth and in age; it is the chapter on Goethe's lyric poetry. Here we range from the days of Friederike and Lili to the "Rising Full Moon" of Dornburg, 1828; we wander with the comfortable assurance that it is all one and the same Goethe, the poet with the all-seeing eye, with the word and the tone for every passing mood. For one who knows his Goethe thoroughly from this side, there is pure delight in renewing one's old friendships and studying them more deeply and connectedly under the guidance of systematic criticism. The chapter has been to us the most stimulating in the entire biography.

Not so with the chapter on the "Wander Years." Despite Bielschowsky's enlightened erudition, our attitude remains that of Mephistopheles toward the song of the sirens. The chapter tickles the ear, but reaches not the heart. The "'Prentice Years" are at least a story, or the semblance of a story; the characters come and go somewhat as they come and go in life, and they do something. But the sequel is hopelessly amorphous; nothing is done, yet there is much talk of this and that. The incidents, or scenes, or groups, or episodes are—in homely parlance—pitchforked together. In comparison, the most disjointed scenes of "Faust" are models of Aristotelian rigor. We ask our readers to note what is said of Eckermann's manipulation, p. 193. If it be true, p. 195, that "the two great fundamental ideas . . . are work and resignation," we fear that the reader must bring to his task almost as much work and quite as much resignation as the poet brought to his.

No such trouble attends the reading of the chapter entitled "The Naturalist," by Salomon Kalischer. In the sober tone which befits a man of science, the Berlin professor expounds one by one the chief features in Goethe's marvellous scientific activity. From this lucid and temperate presentation of facts the least scientific reader will gain an insight into Goethe's aims and method. Even the poet's much-denounced doctrine of colors is revealed in its truth, not as the physics of color, but as the now accepted physiology of colors. The entire chapter, in substance and in form, is a valuable contribution to what may be called, for want of a happier term, popular science in the best sense.

In conclusion, we note a serious defect in Bielschowsky's plan; there has been no provision for a separate chapter upon Goethe as critic. This defect is on a par with the neglect of "Dichtung und Wahrheit," mentioned in our review of the second volume. In sober truth we are unable to understand how a biographer of Bielschowsky's temperament, or indeed any biographer worthy the title, should fail to recognize adequately Goethe's preëminence in criticism. For of all critics, modern critics certainly, Goethe seems to us the most enlightening and stimulating, more helpful to the general student than even Lessing. His entire life, indeed, was a philosophical criticism of himself and others. Yet his utterances are so scattered, so characteristically matters of *Gelegenheit*, that the reader feels helpless without the guidance of a patient investigator who shall collect and properly coordinate them. Here forsooth is a promising field for many a "dissertation"!

Of the translator we have only to say, in parting, that he maintains his high level of excellence. We congratulate him most sincerely on having persevered to the end. There are things which, well done, are their own reward.

CURRENT FICTION.

Vera the Medium. By Richard Harding Davis. New York: Charles Scribner's Sons.

Mr. Davis is always easy to read. With his neat, tailor-made style, his aplomb, his skill at presenting a few types, he need never be at a loss for an audience. That he goes deep cannot be said. The promise which the Van Bibber stories held years ago, has never been fulfilled. He has not gone ahead; he still writes for the undergraduate, and still no doubt pleases him. "Vera the Medium" well illustrates his knack. The material is not of a durable kind, but it is well-tailored; it puts up a good Fifth Avenue front, and is perfectly at home on Broadway. In short, it is literature according to the *boulevardier* of the island of Manhattan, and may be hailed good-naturedly as such.

The Van Bibber in the case is a district attorney, and the damsel he is fated to rescue is one of those shady parasites upon the public folly whom it is a part of his duty to keep within bounds. She is involved in a plot to divert the millions of a dying man from their rightful heir, or rather owner. She knows what she is doing, and the better part of her nature, which is in love with the district attorney, revolts from it. But mediumship has been her inherited profession, and considerations of loyalty to certain persons who have befriended her intervene. She commits herself deliberately to trickery of the dying man, but in the moment of success repudiates it, reveals the fact and nature of the fraud, and is whisked away from the vengeance of friends and enemies by the district attorney, to be good and happy with him forever after. The tale cannot be supposed to throw much light upon the nature of district attorneys, and as a study of the character of the typical young girl "medium" certainly adds nothing to the earlier portraitures of Mr. Howells and others. It has, however, the facility and the engaging boyishness which are what one looks for in this quarter.

Exton Manor. By Archibald Marshall. New York: Dodd, Mead & Co.

In the preface to the American edition of his novel Mr. Marshall writes; "Every other English reviewer who has written about 'Exton Manor' has mentioned the name of Anthony Trollope." We need not, therefore, by a similar allusion, rouse in the author's mind the philosophic sense of "having heard it before," but may safely leave the American reader to the guidance of "every other English reviewer." Mr. Marshall makes frank declaration of allegiance to that body of English novelists "who introduced you to a large number of people, and left you with the feeling that you knew them all intimately"; adding "That particular note of intimacy seems to be lacking in the fiction of the present day, and I should like to have it back." And so would thousands. A story of village tempests in a village teapot, where the tea is not "strong," will be found agreeable and recuperative. That the village is Beaulieu in the New Forest will make instant appeal to many American readers, as they elicit their glimpses of forest, abbey, and moor.

The facts that the vicar is "High," and that there is a deceased wife's sister among the tenants of the Manor, are the two bones of contention. The conflict pleasantly rages on and on and on, and the reader likes to have it. He regrets the arrival of the 483d page, and that, too, without falling deeply in love with any one of the characters, without discovering a vast treasure house of humor, possibly without feeling acutely on the two causes of war. The humor lies chiefly with two nice, queer old characters, Browne and Turner, who have a squabbling liking for one another and a loyal love and hatred for their common friends and foes. The attraction of the book is rather like the attraction of looking from a window at the passers-by or at the opposite house. Seen through a frame and from a good front seat, even plain commonplace becomes drama. Not a little of the blessing and benefit of "Exton Manor" comes from the prevalent other novel, whether it be the romance of machinery, economics, millinery, or problem.

Ashes. By Grazia Deledda; translated by Helen Hester Colvill. New York: John Lane Co.

Sardinia is the scene of "Ashes" (Cenere), the latest of Grazia Deledda's novels to be translated into English; and in it she paints the beauties and desolations of that island, and the characteristics of its primitive people with her usual vivid touch. It is in these things rather than in the conduct of her narrative that Grazia Deledda's power lies, and most readers will feel that the story wanders through its fascinating setting too slowly, with too many dreamy pauses and backward looks.

We start life with the hero at his birth, and in spite of the disproportionate minuteness with which certain stages of his development are traced, he holds our interest and sympathy throughout the story. Of peasant origin, and a foundling, he grows up ardent, ambitious, and idealistic, the two great aims of his life being to win a position which shall enable him to marry his patron's daughter, and to find and reclaim the mother who had deserted him in his childhood. The conflict of these aims makes up the drama of "Ashes." The interest of the love-story is decidedly subordinate to that of Anania's relation to his mother, both before and after their tragic meeting in the mountain hut. This meeting is the great scene of the story—a scene of much dramatic power and truth, with touches of high imagination. The characters immediately surrounding Anania are, with the exception of the girl he loves, well-drawn and vital, but there is an outer circle of shadowy peasants whose talk is so lacking in the pith and humor of Hardy's rustics and of our own rural types that we can but feel it as a tiresome interruption.

The translation, by Helen Hester Colvill, is a somewhat uneven piece of work, at its best so good that one wonders to find the sense of the original a little blurred in certain passages. It is, as a whole, a readable and adequate rendering of "Cenere."

The Simple Case of Susan. By Jacques Futrelle. New York: D. Appleton & Co.

True love cannot run smooth to-day without an automobile—still less can mistaken identity and elopement. Farces no longer rattle. They speed and skid. In the complicated case of the simple case of Susan there was a deal of both speeding and skidding. Too much must not be asked of farce in the way of reasonableness, but one may ask a little more than M. Futrelle has here supplied us withal, or else a little less—in other words, none. We accept his dashing West Point lieutenant as a necessary part of the joke, but we are pained at his having an aristocratic Virginian pedigree and a real military status; and we make positive moan when he snubs his general on a point of etiquette. We like him silly, but we want him neither absurd nor real. For the most part the story bubbles frothily along, evoking an occasional smile—a trifle much, much lighter than air.

R. J.'s Mother and Some Other People. By Margaret Deland. New York: Harper & Bros.

The distinctive merit of Mrs. Deland's "Old Chester Tales" no doubt tempts one to be over-exacting with regard to her other stories. We miss in these scenes and persons the quaintness and ripeness of Old Chester, its Doctor Lavendars, and its Willy Kings. The present bits of fiction are evidently quite "magazinable"—have, indeed, been "magazined." The pathos and sentiment of "R. J.'s Mother" are just what the special public, the thirty-five-cent public even, obviously wants. The tear they bring to the easy eye is not, one reflects, a tear to be proud of. The fact of artifice is too readily apparent, the means employed too patent. R. J., for example, is bell-boy in a New York hotel, to which comes presently a man of middle age, whose eyes are threatened. Many years before he has lost his wife and young son, and in fancy the child has lived and grown up with him. R. J. is a friendly cub, and turns out to be just the age of the dream-boy, to a day. Hence a gradual growth of interest on the man's part, and a final determination to give the boy some schooling. The boy, however, represents a single slip on the part of his mother, a poor but virtuous actress; and she has sworn, for the sake of the boy's faith in her, to owe nothing further to any man. So the mild benefactor offers her marriage, that he may have unquestionable right to care for the boy; and for the boy's sake she accepts. Then the boy dies—is killed off, one may fairly say—and the matrimonial bargain, though the man chivalrously offers to clinch it, is dissolved. Follows a return to his provincial home, and the speedy discovery that he and R. J.'s mother really need each other. Present from the outset, whether in foreground or background, has been a sister-in-law of his, who rather unpalatably illustrates Mrs. Deland's occasional tendency to caricature, and who is no doubt largely responsible for one's impression of the story as a thing made, not born. The other tales are, with the exception of "The White Feather," in a similar vein. They leave one, as we have intimated, a little homesick for Old Chester.

Purple and Homespun. By Samuel M. Gardenhire. New York: Harper & Bros.

Purple is the Lady Victoria, not only "a rose among women," but "the daughter of a hundred earls"; homespun is he, the man of her choice, a plain United States Senator, of distinguished manners, but inferior, even ignoble, birth. Lord Francis Wemyss is the harmless, if useless, British ambassador at Washington. He is "the last of the direct line," but it is proposed to provide suitably for the succession by marrying his daughter Victoria to a half-nephew, heir of the title. This gentleman is precisely the combination of fool and knave which American tradition of the English army officer requires. He has betrayed and deserted a middle-class girl in youth and when his cousin agrees to marry him he remarks: "I say, Vic, this is too good of you, old girl!"—facts which sufficiently place him. The only unaccountable things about him are his name, Algeron, as it is consistently spelled, and the fact that he marries not Vic old girl, but the partner of his youthful indiscretion.

But it is not to be supposed that the action is all upon the plane of British melodrama. Most of it takes place in America, and the feeling is intended to be American. The marriage of Lady Victoria to the Senator of poor and not very honest extraction is a triumph of democracy. The opening chapter is an object-lesson as to the perquisites of the popularly governed. It recounts a familiar interview between the Senator and the President, in which that ruler (whose identity is hardly veiled) displays the paternal and jocular interest in the private affairs of his subject which has so endeared him to the nation. He congratulates Senator Treemon on his recent reëlection:

> "You know the State," said Marshall Treemon. Irrespective of the population outside, there's my chief city, which has a system of politics all its own. My metropolis is full of——"
>
> The President lifted his hand with a quick laugh.
>
> "We won't say what your metropolis is full of," he replied. Sufficient is the fact that you won the State, and won it fairly Now that we have it, let's keep it."
>
> "Let's keep the whole country," said Treemon, looking up."
>
> "Good!" ejaculated the President. "I intend to keep it."

Thereupon the Senator is rallied upon his attentions to the ambassador's daughter, who has just fled back to England to escape his snares. It must be said that this interview as a whole is sufficiently interesting to prepare the mind for more of a story than actually follows. On the whole, the affair is labored and inconclusive. There is a lot of business about a group of Socialists in New York and their affairs. The Senator goes among them, and greatly to his astonishment learns that Socialism is not nihilism, etc. One of their leaders is the once poor girl whom Algeron has betrayed, but who presently comes to a glory beyond that of Socialism. The most interesting person in the book is an Irish Maggie of the Mark Tapley type, who does not seem to deserve the horrid experience thrust upon her.

Federal Usurpation. By Franklin Pierce. New York: D. Appleton & Co. $1.50 net.

Whatever one may think of Mr. Pierce's methods or conclusions, it cannot be denied that his vigorous plea for State rights, cast as it mainly is in the form of a stinging arraignment of President Roosevelt and his policy, is worthy of thoughtful consideration. Neither the facts nor the tendencies which they show are, of course, new, although no recent writer has so carefully collected them. Ever since the years of the civil war, when arms imposed silence upon more than one law, and of Reconstruction, when Republican leaders rode roughshod over constitutions and rules of justice, Mr Pierce notes a steady and ominous progress in centralization and in Federal encroachment upon the reserved powers of the States, culminating in the well-known course of the present Chief Magistrate. The outspoken criticism of Federal judges; the proposal of Representative De Armond that the President be empowered to remove Federal judges at his discretion; the declaration of President Roosevelt, in his Harrisburg speech, that the powers of the Federal government should be increased "through executive action, through legislation, and through judicial interpretation and construction of law"; the payment of pensions on executive order; the unauthorized collection of customs duties in San Domingo; the virtual seizure of territory and rights of control in Panama, and the Brownsville affair, are only the more striking illustrations of what Mr. Pierce believes to be a deliberate purpose to enforce the will, or even the whim, of the Executive without regard to constitutional restraint.

The same baneful purpose is shown in other departments of the government. The protective tariff, foundation and stay of a rank paternalism; the multiform activities of the Department of Agriculture, most of which Mr. Pierce finds lacking in constitutional warrant; the arbitrary power of the Speaker, joined to an iron-clad committee system and a ruthless suppression of debate in the House; and the easy passage of unconstitutional appropriations, like those for irrigation work within State lines, illustrate the absolutist tendency of recent Federal legislation. The Supreme Court, having sustained a greenback currency and rendered a Federal income tax impossible, holds, in the Mankichi case, that indictment by a grand jury and conviction by a unanimous verdict in a murder case are not fundamental rights of the citizen in Hawaii.

The essential facts on which Mr. Pierce's elaborate arraignment is based cannot, of course, be gainsaid. When, however, we turn to the remedies which Mr. Pierce offers for existing ills, and which, in the long run, must be the justification of his sweeping indictment, we confess to a feeling of disappointment. We agree with him that the Constitution has been, in some respects, outgrown, and ought to be amended, but we also agree with him in believing that nothing short of a political or social crisis, comparable in gravity to that which resulted from the civil war, will be likely to bring such changes about. Mr. Pierce is too good a lawyer not to know that a written constitution develops by usage as well as by judicial construction, and that the tendency under our system has been from the beginning to hold that what is not forbidden by the Constitution is permissible; but he gives scanty weight to these considerations in bis arguments. To say that we have not parliamentary government in the United States is to say only what every tyro in political science or constitutional history knows; but to say that we ought to have it is obviously to plead for reform, not by process of amendment, but by way of constitutional revolution. We concede the desirability, on many grounds, of popular election of United States Senators, merely noting that the change is, in practice, rapidly coming about without formal amendment; while the extension of the referendum, the control of monopolies through taxation, and the reduction of the volume of private and special legislation, are cordially to be approved. On the other hand, the lengthening of the Presidential term to seven years, without reëligibility, is one of those counsels of perfection regarding which some generations of discussion have failed to bring about the faintest trace of agreement even among reformers themselves.

The fact is, we have always, as a nation, been far more concerned with the substance of government than with its form; and while, from the standpoint of the lawyer and the philosopher, this is admittedly a weakness, competent observers have more than once pointed out that the evil consequences of our inconsistency are less than might naturally be expected. The difficulty, as Mr. Pierce more than once intimates, is that the great majority of us are so absorbed in getting a living or accumulating wealth, that we do not pay much heed to government or administration unless they oppress or grievously neglect us. But the great popularity of President Roosevelt, which Mr. Pierce apparently deplores, is not due to the fact that he is "dazzling the nation with visions of empire," but to the widespread conviction that he has seriously, and with much success, tried to cope with great social evils. That, in the great fight which he has made, he has paid little heed to his constitutional limitations, needs no volume of four hundred vigorously written pages to show; but to hold that he is making shipwreck of the Constitution, reducing the States to geographical expressions, and turning the republic into an autocracy, sounds to us less like a searching constitutional criticism than like a wail of despair.

Prehistoric Japan, by Neil Gordon Munro, 421 illustrations. Tokyo: The Z. P. Maruya Co.

To the already somewhat extensive list of books on the archæology of Japan Dr. Munro, resident of the Far East, and an anthropologist of some note, contributes an interesting addition in "Prehistoric Japan." The book is far more comprehensive than its title implies, as it deals not only with the men of the stone age, but with the Yemishi, the Yamato, and other races inhabiting Japan down to the close of the age of the dolmen builders, at the beginning of the historic period, about 700 A. D. The work is divided into two parts. The first seven chapters—Part I.—are occupied principally with the inhabitants of the Stone Age. After treating briefly of Palæolithic and Neolithic conditions in Japan, the author goes into a full description, accompanied by linguistic proofs, and excellent illustrations from drawings and photographs, of the pit dwellers and their customs, including an account of implements, utensils, ceramic and other arts, dress, and social relations. The six chapters of Part II. are devoted almost wholly to the Yamato race, which is supposed to have exterminated or absorbed the original inhabitants, with the exception of the Ainu remnant still clinging in Yeso and the northern islands.

This work is of special value, for its bearing upon three questions that have long attracted anthropologists.

The first is as to the indentity of the race occupying the Japanese archipelago in the Stone Age. Japanese scholars have been inclined to assume that these people were descendants of some Eskimo race, because the drawings on the fragments of pottery found in their pit dwellings show large round eyes and no beards. This view Dr. Munro opposes and he agrees with those who identify the men of the Stone Age with the ancestors of the modern Ainu. To him the occurrence of crude pottery and iron in the ancient cave and pit dwellings of Japan and the neighboring islands, is the clearest proof that these places were the abodes of the Ainu ancestors. Thus he contends (against Prof. Tsuboi) that the Ainu were makers of pottery, for he maintains that he has found several undoubted specimens of their work in the cave dwellings of Saghalien and the Kurile islands. The inference of Eskimo origin drawn from the beardless drawings above mentioned, he regards as unwarranted; for though the Ainu are admittedly a hirsute race, they were known to shave in times of mourning; and the large round eyes of the figures, might, he thinks, be interpreted to represent the seer of the tribe.

On the second question, whether it was these aboriginal Ainu tribes, or the Yemishi of native Japanese ethnology, who opposed the advance of the invading Yamato, Dr. Munro does not appear quite so clear. But he is satisfied that various colonies from the southern islands of Japan, including even the Philippine group, may have settled from time to time in Japan; and that these united with the aboriginal inhabitants in resisting the intruders from the Asiatic mainland.

Thirdly, since much more is known about the Yamato than about the older races Dr. Munro treats this subject with a greater lucidity and assurance. The Yamato are regarded as the ancestors of the modern Japanese, to whom the subject is at present of special interest in view of the fact that since the growth of Occidental discrimination against them on racial grounds, they are disposed to seek an Aryan rather than a Mongolian ancestry. Dr. Munro sides with those who believe the Yamato race to have come from the Chinese mainland by way of Korea. The immigration began probably about 500 B. C., and continued down to the dawn of Japanese history, say 700-800 A. D. The Negrito, Malayan, or other tribes, that may have founded colonies on the islands, probably at first offered a feeble resistance, but were in time either exterminated or absorbed by the invincible race of Yamato. The conquest was more likely to have been by slow process of amalgamation than by force of arms, and the fertile generations continued to receive an increment of culture and civilization from the Chinese mainland all through the long period of increasing occupation. There is here, of course, a wide divergence from the views of those who are inclined to regard the race of Yamato as largely Malayan or Indonese. But some of the greater difficulties of the subject do not seem to be wholly elucidated by Dr. Munro. It is well known, for example, that the Yamato were great dolmen builders; many specimens of their work are to be seen throughout Japan. If the Yamato came from China, how is it that none of their dolmens are to be found there? To come upon anything at all corresponding, we must travel as far west as the Caspian, and the adjoining region. Korea contains some traces of dolmen building, but not of a kind identical with that in Japan. In the Japanese dolmens are found iron, bronze, and pottery that show an advanced stage of civilization. Moreover, it appears that the Yamato were in the country a considerable period before they began to build dolmens; during that time they erected only simple mounds for the reception of their dead.

Dr. Munro concludes that the present Japanese are a much-mixed race, the predominating elements being the Negrito, Mongolian, Palasiatic, and Caucasian; and that the amalgamation took place both before and after the invasion, and up to the time when the Yamato became supreme in the islands of Nippon.

Big Game at Sea. By Charles Frederick Holder. Illustrated. New York: The Outing Publishing Co. $2 net.

Favorite Fish and Fishing. By James A. Henshall. New York: The Outing Publishing Co. $1.25 net.

To look at the photograph of Mr. Holder, for instance, opposite page seventy, one might easily imagine him by habit and preference an in-door professional man to whom the yellowtail just brought to gaff is a new experience. Readers of angling literature have long ago learned to know him, however, as one of the boldest adventurers who ever handled rod or harpoon, ready in the interests of either science or sport to tackle almost any creature that swims the seas, and always insistent upon the highest ideals of sportsmanship. It would take a new and liberal definition of angling to include many of the exploits described in this volume. The initial chapter introduces us to the sea-bat, or devil-fish, a specimen of which Mr. Holder harpooned from a small boat on the Florida reef and clung to successfully through a long and sometimes perilous chase until the monster finally undid itself by running high upon a mud flat. We quote a sentence or two describing the effect when the sea-bat felt the harpoon:

> It appeared to fly into the air, rising,

> an appalling mass of flesh, out of the seething waters, its side wings beating the heated air as it rose, then falling with a crash and the reverberating sound we had listened to the night before; fell as a square twelve feet by ten feet and weighing a possible ton might fall.

One could hardly imagine Izaak Walton as the protagonist in this exploit, and still less in that of the next chapter, where Mr. Holder actually dives to the bottom on the edge of the outer reef, and attempts with his bare hands the capture of a big green turtle. After a few moments' desperate struggle, during which Mr. Holder rose to the surface often enough to get at least the minimum allowance of oxygen, the turtle worked over the edge of the reef and dove into the deep cold water, when Mr. Holder was of course obliged to loosen his grip. "It's jest like I told you, sah," said the negro boatman as he came to the surface. "If you kin stay down yander twenty minutes you kin do it." Surely Mr. Holder deserves the title of the Rough Rider of sea angling.

Of course these are the extremes, and Mr. Holder has no ambition to raise sea-bat spearing or submarine turtle wrestling to the rank of a recognized branch of sportsmanship with an organized club, prizes, officially attested records, and printed rules and regulations. After all, his main interest lies in what sea anglers at least recognize as legitimate game fishes, such as the tuna, the tarpon, the sea bass, the barracuda, and the yellowtail. For what he has done to establish and maintain a decent standard of ethics in the capture of these fishes he deserves credit second to that of no other American sportsman who has labored to relieve the joy of the rod from the reproach which the brutal and the thoughtless bring upon it. In our review of one of his former books words were used which he misinterpreted as an indictment of the good faith of his statements in matters of ascertainable fact. Nothing of the kind was intended. When Mr. Holder tells the weight of a fish actually brought to his own scales, or those of any of the reputable clubs with which he is connected, when he gives the weight of a rod, the fineness of a line, or the time spent between strike and gaff in any given capture, the matter is settled for any reader who knows anything of Mr. Holder. A good part of any angler's writing is not, however, the record of physical measurements, but the impression of stirring scenes and struggles upon an imagination which, if not somewhat excitable, would be seeking its pleasure in other fields. Hence the reader is entitled to his own opinion as to whether the language is within or beyond the range of possible occurrence. Let us quote a few words from a description of a battle between two swordfishes:

> They turned about each other possibly three or four times, then like battering rams came together with a strange whistling sound and an impact that tossed the white churned spume high in air, came together as only bodies weighing two or three hundred pounds can, when impelled by animate vibrant engines of unknown power; came together and remained there, whirling, tossing, tail in air, rolling over and over, twisting, writhing, bending like blades of steel, waving, fanning the spray-filled air until the myriad-hued ocean whose every move caught the splendid tints of the clouds, looked like the centre of some strange volcanic disturbance, in which flashed the fins and dim form of Turner's masterpiece—the Slave Ship.

This would hardly stand the laboratory tests of a scientific age, but, none the less, we wish long life to Mr. Holder's pen.

Dr. Henshall's writing has the same flavor as of old, the ineradicable preference for the black bass, the unwillingness to admit that the large-mouthed variety is inferior to the small, and the same delightfully old fashioned habit of introducing occasionally the Prioress of Sopwell, with her "Treatyse of Fysshinge with an Angle." The bass, the grayling, and the trout fill the bulk of his volume, but he yields to the more strenuous coterie so far as to give fifty pages to the tarpon and other big game fishes of our southeastern coast. He has found some sport in tarpon fishing, but with the little fellows of from ten to forty pounds, taken with the salmon rod and gaudy flies, and hence hooked in the mouth, not in the throat. He is not exactly convinced that methods which aim to hook a fish in the gullet, although surer to result in capture, are ethically commendable. He admits the fascinating excitement of capturing these monsters of the deep, but the Waltons and Cottons and Bethunes, he thinks, "would view with wonder and silent sorrow the tendency of many anglers of the present day towards strenuosity, abandoning the verdure-clad stream, with its warbling birds and fragrant blossoms, for the hissing steam launch and vile smelling motor-boat in pursuit of leaping tuna and silver king." And we are inclined to agree with him.

English Local Government from the Revolution to the Municipal Corporations Act: The Manor and the Borough. By Sidney and Beatrice Webb. Vols. II., III., pp. viii., vi., 858. New York: Longmans, Green, & Co. $7 net.

The first volume of Sidney and Beatrice Webb's "English Local Government" (reviewed in the *Nation* of February 7, 1907, p. 135) sketched the government of rural England through the parish vestries and the benches of justices. In these two volumes, the second instalment of this great work, Mr. and Mrs. Webb carry their research into the organization of the manor and the borough, as these existed from the Revolution of 1689 until the first great reform of English local government in 1835. One of the first acts of the Parliament, which was elected after the reform of the House of Commons in 1832, was to appoint a Royal Commission to inquire into the government of the incorporated cities and boroughs in England and Wales. Though the report of this commission has long been familiar to students and historians, a popular and accessible account of it has hitherto been greatly needed. No part of Mr. and Mrs. Webb's volumes affords more interesting or instructive reading than the chapters devoted to this subject. Mr. and Mrs. Webb compute the number of boroughs, in 1833, at either 199 or 205, according to the view taken of the status of six doubtful cases. Of these boroughs, 160 in England and 18 in Wales were reformed by the Municipal Corporations Act of 1835, and were given the excellent form of local government which has so greatly contributed to the wholesome and enterprising character of municipal life in England.

The special merit of the section of Mr. and Mrs. Webb's book which is devoted to the manor is that it brings out the kinship of the early English town to the feudal manor, and the fine gradations which existed up to 1835 between the manor which had a wholly rural population and the borough which, by purchase or gift, had become possessed of manorial rights, and probably also of the actual landed property to which these rights had attached. Mr. and Mrs. Webb also bring out the continuity of English life, and show how closely English people are touched, even in the twentieth century, by the old feudal bonds and customs which formed the manor organization; and how recently many large towns have purchased their freedom from the ancient lord of the manor. Lancashire presents a number of such instances among its industrial townships. Oldham, Bolton, Heywood, and Rochdale, all grimy and prosperous cotton towns within twelve miles of Manchester, freed themselves between 1878 and 1893 from the Manor Court of Salford; and in Salford itself, with its 250,000 inhabitants, "the ancient court of the Wapentake, or Hundred, of Salford survives to this day." The early organization of the manor was adapted to a community occupied in the tilling of the lord's land and of the common lands of the villeins. As soon as any industry caused an aggregation of population, some further organization was necessary. Hence grew up the manorial borough, where the lord still retained his supremacy, and dispensed justice in his own courts; but where the inhabitants obtained from him various rights of self-government. From this beginning sprang the English municipal corporation.

The great variety in borough government previous to 1835 is well brought out by Mr. and Mrs. Webb. Many boroughs were governed by close corporations—small and self-elected cliques, who did not admit their fellow-townsmen to any share of responsibility. In others there was a much greater popular element. In all, however, the right to elect members to Parliament had by 1689 already become of paramount importance, and this right led to an increasing interference by outsiders, who sought to control borough representation. Mr. and Mrs. Webb do not, with some of the nineteenth century reformers, think that the connection of the boroughs with Parliamentary elections was the sole root of the inefficiency and rottenness in municipal government which was ended by the act of 1835; nor do they look upon the corporations as so wholly bad and ineffective as it has long been the fashion to regard them. The close bodies especially, as distinguished from those corporations in which the general body of the freemen were represented, find apologists in Mr. and Mrs. Webb:

> We watch close bodies pursuing a policy of improvement of the commons, which, at the cost of individual freemen's rights, would augment the value of the corporate estate; we see them willing to develop the accommodation and usefulness of the market; we see them taking long views of the requirements of the port; and, against the interests of individual freemen, and even of the present generation, administering in the larger interests of an undying corporation. No candid student can doubt that, as between the

close corporation, on the one hand, and what we have called the municipal democracies, on the other, it was especially in the management of their corporate property that the close bodies have the advantage.

Besides the local authorities already described (the justices and vestries of county and parish, the manor courts, and the borough corporations), there were, between 1689 and 1835 numerous statutory *ad hoc* authorities—boards of commissioners to manage the relief of the poor; to cleanse, pave, and light the towns; to erect markets, or provide docks; to maintain roads, or embank rivers. These statutory authorities are still to be described in forthcoming volumes. The undertaking, when completed on the scale and with the thoroughness of the three volumes already published, will form one of the great historical works of the present century.

The Standard of Usage in English. By Thomas R. Lounsbury. New York: Harper & Bros. $1.50 net.

It is hard to conceive what audience Professor Lounsbury's volume of essays in popular philology will benefit. Affected purists, such as some teachers in old-fashioned seminaries for young ladies, might profit from Professor Lounsbury's vigorous statement of the futility of artificial standards and from his examples, gathered partly from early volumes of the Oxford Dictionary and partly from his own research; but they would probably be so offended by his chronic irritation and by his gratuitous sarcasms that they would not finish his book. The average magazine reader—the chapters first appeared, abridged, in *Harper's*—who was pleased by the linguistic tolerance of the essays, would probably be misled.

The attitude of the book is mainly negative, an exposure of false standards, to such an extent that one's final question is: Well, is there any use of standards in English? Professor Lounsbury believes that such destructive criticism is that most needed. "It is not from the quarter of license that any danger to our speech arises. If peril exist at all, it comes from the ignorant formalism and affected precision which wage perpetual war with the ancient idioms of our tongue. . . . Amateur champions of propriety" are "ensconced at every fireside. In colleges and academies and high schools they constitute an army of assumed experts, who are regularly engaged in holding in check any attempt to indulge in real or supposed lawlessness." Few careful readers who have to use contemporary books of reference, such a scholarly work, *e. g.*, as the "Cambridge Modern History" or scientific books, popular or technical, or who notice the ingrained inaccuracy of much newspaper and periodical writing, will agree that the danger from purism even begins to compare with that from license. Careful readers or writers probably agree that many useful distinctions in vocabulary and grammar are being lost and that the fine accuracy of the language as a tool of expression is consequently becoming dulled by such general indifference. It is, therefore, helpful that, as Professor Lounsbury admits, "men should hold and express opinions about the propriety of usages already existing or coming in, and do all that in them lies to bring about the rejection of what they deem undesirable." It is only harmful to treat such efforts, though often mistaken, in an attitude, like Professor Lounsbury's, of almost indiscriminate ridicule.

One is inclined to believe that this attitude results from a fundamental wrongness of principle. Professor Lounsbury accepts as the sole standard of usage the practice of "the best speakers and writers." In applying his standard he includes all the "great writers"; for "it is idle to suppose that a man who has attained the highest eminence in literature will not, in the vast majority of instances, have been particular as to the proper treatment of the material with which he has been dealing." Now there is every probability that the "great writer" has been particular as to the treatment proper for the effect he chiefly desires—the larger literary effectiveness; but he may have been indifferent or insensitive to minor niceties. The splendid eloquence of Ruskin did not save him from much small inexactness of expression; the journalistic training of Dickens left throughout his amusing or touching pages much slovenliness of expression.

The style of Professor Lounsbury's book illustrates this insensitiveness. Too frequent for excuse, in a work by a scholar, on such a subject, are the examples of confused number ("Landor's reckless assaults upon 'the vernacular idiom' . . . furnishes a most amusing chapter in his stormy life," p. 149. "There will consequently be found in individual writers a condition of things which seem to bear directly against the truth of the general conclusions deduced," p. 277); or of ambiguous pronouns ("While what is said of it [the word *female*] may be itself absolute truth, it leaves out so much of the truth that it tends to produce an altogether wrong impression," p. 221). Shortly before the inconclusive paragraphs on *shall* and *will* occurs the sentence: "Were all of this class of writers to fail us here, we would have to regret the impairment of the speech thereby produced" (p. 159). A volume of protest against "schoolmastering the language" should give better evidence that the writer has mastered his language.

The History of New France. By Marc Lescarbot; with an English translation, notes, and appendices by W. L. Grant; and an introduction by H. P. Biggar. 3 vols. Vol. I. Toronto: The Champlain Society.

In selecting Marc Lescarbot's "History of New France" as the first of its publications, the Champlain Society has made, on the whole, an admirable choice. Of the several published narratives upon which students must chiefly rely for the early history of New France, nearly all save Lescarbot were already accessible in modern reprints, as well as in adequate translations. For Champlain, we have the Quebec edition of 1870, edited by Abbé Laverdière; and C. P. Otis's translation published by the Prince Society in 1880, and reprinted in 1907 in the series of Original Narratives of Early American History. Charlevoix scarcely needs reprinting in the original, as the 1744 edition, especially the octavo in six volumes, is readily procurable and not very expensive; and J. G. Shea's translation (1866) leaves little to be desired. The same may be said of Shea's translation of Le Clercq. Cartier we have in several forms, more or less satisfactory; and Dr. R. G. Thwaites has given us both text and translation of the Jesuit Relations. Of the editions of the "Histoire de la Nouvelle-France," published during Lescarbot's lifetime, the first in 1609, the second in 1611 (reprinted the following year), and the third in 1617, all are to-day practically unobtainable, and are to be found only in large reference libraries. Tross's reprint of 1866 in three volumes is useful, and may still be picked up for a few dollars, but for some unexplained reason Tross reproduced the 1612 issue, instead of the enlarged edition of 1617. The only translation hitherto available has been that of Pierre Erondelle, published at London in 1609, under the title "Nova Francia; or, the description of that part of New France which is one continent with Virginia," and reprinted in the Harleian collection of Voyages, 1745. This translation, admirable as far as it goes, covers only Books IV., V., and VI. In the Champlain Society edition, on the other hand, we have the text of the 1617 edition, embodying Lescarbot's latest corrections and additions, as well as the first translation of the entire work.

The first of the three volumes includes Mr. Biggar's Introduction, Mr. Grant's Preface, and the translation and text of Books I. and II. Book I. describes the "Voyages and Navigations made by the Commission and at the Expense of Our Most Christian Kings Francis I. and Charles IX., in the New Land of Florida and Virginia, by Captains Verrazano, Ribaut, Laudonnière, and Gourgues"; and Book II. the "Voyages Made Under Captain Villegagnon Into the Antarctic France of Brazil." Both books are, therefore, rather in the nature of an introduction, than the history of New France itself, though Lescarbot's proposed boundaries of the colony made it practically conterminous with the continent of North America. Indeed, it is in Books IV. and VI. alone that we have the record of Lescarbot's own experience in the New World; the remainder of his work is practically a summary of the recorded voyages of others, valuable mainly because of his comments.

It must not be forgotten, however, that Lescarbot's History possesses an importance of its own as literature, and that in this respect it has no rival in the early books of New France. Mr. Grant in his Preface brings out the peculiar quality of Lescarbot's style, and at the same time admits the difficulty of reproducing it adequately in translation:

> Lescarbot, like Herodotus, whom he so much resembles, should be read in the original. Each tells his tale with that well-bred simplicity which marks the gentleman, with the same mixture of apparent credulity and keen skeptical intelligence. There is a touch of condescension in the professed deference with which each dismisses some well-worn legend, perhaps dear to his audience.

To the example quoted by Mr. Grant, the following might well be added. Speaking of Verrazano, Lescarbot says:

> One writer relates that on reaching Cape Breton, which is the entry for sailing to-

> ward the great river of Canada, he was captured and eaten by savages. This I can with difficulty believe, seeing that he gave to the King the above account of his voyage.

Not the least interesting part of the present volume is Lescarbot's half-serious conjectures as to how and when America first became known to the ancients. One may particularly commend his entertaining theory that this continent had perhaps been peopled by Noah immediately after the Deluge (p. 47). Inevitably, in a translation of such a difficult author, there are many points that ono might question. No two competent translators would agree as to the best version of many passages. Nevertheless, Mr. Grant's translation as a whole is admirable, and worthy of a place beside Otis's Champlain and Shea's Charlevoix. The text, however, offers opportunities for many more useful notes than Mr. Grant has seen fit to give, and Mr. Biggar's Introduction might have been considerably enlarged.

Science.

"Long Life and How to Attain It," by Dr. Pearce Kintzing, professor in the Maryland Medical College (Funk & Wagnalls), is the third book recently published, dealing with the span of human existence. Élie Metchnikoff's "Prolongation of Life" (see the *Nation* of February 6, p. 132) was, to be sure, published in French several months preceding its translation into English, but the fact that it is being widely read and commented upon in America is sufficient evidence of public interest in the subject. Prof. C. S. Minot's, "Age, Growth, and Death," approaches the subject from the point of view of an embryologist. Dr. Kintzing, as a physician rather than an avowed disciple of pure science, takes up the matter from the practical side and devotes himself to rules of hygiene and the results of non-observance of them. He shows quite clearly that longevity is after all a relative matter, and that some men, judged according to accomplished results, have lived longer when they have reached forty than others who toil on until seventy or eighty. The factors predisposing to long life, Dr. Kintzing sets down truthfully if somewhat tritely, viz., power of digestion and assimilation of food; lack of useless material, *e. g.*, fat; moderate eating, little alcohol; and the cultivation of a cheerful, placid temper and regular, temperate habits. He also notes that the first-born of a family are likely to live longer than the last-born, but does not attempt to explain why, although theoretical reasons are not far to seek. Throughout the volume it is evident that the author is a lover of rural life, and his fondness for aphorisms which stick in the memory serves to strengthen his arguments in favor of the country as a habitation. But dweller in city and country alike will agree with him that "an honest plumber is the noblest work of God."

John J. Ward's "Some Nature Biographies" (John Lane) is a loosely connected series of nature studies in the Grant Allen style, mostly in the field of entomology. The several chapters, which first appeared as separate papers in the popular magazines, are interesting and well written, and give evidence both of a sound knowledge of the best authorities and considerable independent observation. The numerous photographic illustrations are illuminating. An interesting feature of the volume is a set of photographs of a pleasing Warwickshire landscape taken, one in each month of the year, from the same spot. Nothing could better indicate the evenness of the English climate, as compared with the extremes with which we are familiar in the northern United States.

Perry D. Frazer's "Rod Making" (Forest & Stream Publishing Co.) is put forth as the first volume of a series under the title, The Angler's Workshop. Although it lacks the charming style and broad view of the late Henry P. Wells's "Fly-Rods and Fly-Tackle," which must ever remain an angling classic, Mr. Frazer's work, the different chapters of which have appeared in *Forest and Stream*, has the advantage of greater modernity, and may be regarded as indispensable to the inexperienced amateur in rod-making. The author indulges in the unsubstantiated statement that "rent and glued cane rods" were invented and first made by Americans, while the facts are that three-strip rods of cane were rather common in England in the forties, at which period they were, so far as we know, not made in this country. The drawings in Mr. Frazer's book are helpful, but the full-page illustrations are quite irrelevant.

Louis Rhead's "The Book of Fish and Fishing" (Charles Scribner's Sons) is somewhat superficial in character, the result of a desire to cover the entire field of both salt-water and fresh-water angling. While Mr. Rhead's ideas are in the main sound, his sins of omission are serious. Even an elaborate table of contents cannot possibly take the place of an index. The important question of cost is hardly touched upon; while the authority of a manual which, in treating of the best localities for salmon-fishing, fails to make any mention of Newfoundland, is at least open to doubt. There are many examples of slipshod English.

To the amateur gardener who wishes to keep a record of his operations we can recommend two useful volumes. One is "The Commuter's Garden Record," compiled by Amy Carol Rand and published by H. M. Caldwell Co. In this the names of flowers are set down in alphabetic order with directions as to proper date for planting, nature of soil required, time of blooming, and other matters of the sort. Half of the book is a "Record of Flowers" in diary form to be filled out by the gardener. The book is prettily made and suitable for a gift. Loring Underwood's "Garden Diary and Country Home Guide" (Frederick A. Stokes Co.) is a larger volume printed as a diary for the year, with brief bits of timely garden advice printed above the page for each day. An ingenious index at the back will enable the user to follow his record of each plant throughout the season.

A hitherto unknown writing of Roger Bacon was discovered recently by the French physicist, P. Duhem, member of the Paris Academy, in the Bibliothèque Nationale. The manuscript, which came originally from the library of Louis XIV., dates from the second half of the fifteenth century. It is part of Bacon's Opus Tertium of 1267 and connects directly with the part published by Brewer in London in 1859. Duhem prints an extract from which he concludes that the English philosopher was acquainted with the composition of gunpowder—a point that has been disputed.

"Südafrika: Eine Landes-, Volks- und Wirtschafts-Kunde," by the geographer and traveller of the University of Breslau, Prof. Siegfried Passarge (Leipzig: Quelle & Meyer), is a valuable addition to our knowledge of South Africa. Although more popular than technical in character, the work is based on scientific investigation. Passarge believes that South Africa was originally connected with South America and Australia. There are 47 illustrations, 34 charts, and many profiles.

The fourth Latin-American Scientific Congress, which will be known also as the first Pan-American Scientific Congress, will meet at Santiago, Chili, December 1. The sub-divisions will consider the following subjects: (1) mathematics, (2) physical sciences, (3) natural sciences and anthropology, (4) engineering, (5) medical science and hygiene, (6) law, (7) sociology, (8) pedagogy and philosophy, (9) agriculture and zoötechny. The following-named persons have been designated to represent the United States: W. H. Holmes, Bureau of American Ethnology; Col. W. C. Gorgas, United States army; Prof. Bernard Moses, University of California; Prof. William B. Smith, Tulane; Prof. Paul S. Reinsch, University of Wisconsin; Prof. Leo S. Rowe, University of Pennsylvania; Prof. William R. Shepherd, Columbia; Prof. A. C. Coolidge, Harvard; and Prof. Hiram Bingham, Yale.

Drama and Music.

Maria Stuart im Drama der Weltliteratur vornehmlich des 17. und 18. Jahrhunderts. Von Karl Kipka. Pp. viii+423. Leipzig: Hesse.

Of late years German scholars have produced various monographs upon leading characters in the modern drama; for example: Moeller, "Die Auffassung der Kleopatra in der Tragödienliteratur," (1888); Mix, "Zur Geschichte der Cäsartragödien" (1890); Speck, "Katalina im Drama" (1906). To these may be added Secundus, "Geschichte der Salome von Cato bis Oscar Wilde," of which two parts have appeared, and which, although not restricted to the drama, touches it at various points. Such works have peculiar value for the student; by tracing the movement of a dramatic theme from generation to generation, and from land to land, they elucidate changes of fashion and differences in national temperament. If not exactly "comparative literature," they are at least a step towards the better definition of that much-vexed study. The present work by Kipka is the most ambitious of its kind, and offers the most attractive theme. Julius Cæsar, Cleopatra, Catiline, it is true, have not lost interest for us, but we have settled down to a pretty stable estimate of their respective values. Whereas the Queen of Scots still arrays the world of scholars and readers into hostile camps, is still the occasion of angry debate and the shedding of much ink.

The fates were unkind, not by provoking

much inkshed, but by killing Mary a century too late. Had Mary Stuart lost her head with Buckingham in the times of Richard III., or even with Warwick and Perkin in the reign of Henry VII., we might have got from some stout-hearted Elizabethan a drama commensurate with her extraordinary personality. But not even the man, or men, who ventured to put upon the boards the father and mother of Elizabeth, with the unfortunate Katharine and Wolsey, could afford to take so much as a side glance at Fotheringay Castle. Besides, why should the Elizabethan dramatists, patriotic to the verge of absurdity, interest themselves in England's most dangerous enemy? So it was that the only men who were able to handle effectively the most tragic Queen, passed her by and left her to the feeble efforts of indignant but uninspired Continental Catholics. The first half of Kipka's work is a careful study of these efforts in Latin, French, Italian, Spanish; they may all be briefly ticketed: *facit indignatio versum*. One play alone appears to be an exception, that by the Roman Della Valle, 1628. To judge from the abstract and brief quotations (pp. 108-111), Della Valle possessed dignity, grace, and an insight into tragic situation. Noteworthy is the feature that Mary is not beheaded but *guillotined* (p. 110 and note). The Dutch poet Vondel and the Germans, Kormart, Reimer, Haugwitz, and Gryphius (pp. 127-184) are—if possible—less interesting even than their Romance brethren; the discussion of their writings can have only an historical value.

Banks's "The Island Queens, or the Death of Mary Queen of Scotland," the first English drama, is a tiresome Restoration piece, which gets all the credit to which it is entitled. Yet we must protest energetically against certain of Kipka's general conceptions. In the first place, it is wrong to blame the Puritans for the mediocrity of the Restoration drama. The old dramatic impulse had used itself up; it would have run its course in any event, had there never been a Commonwealth. In the next place, our author, like many of his contemporaries, is too fond of calling things "Germanic." We on our part do not believe that English traits and manners of the seventeenth century are in any sense Germanic. Still less can we approve of Kipka's heading his Section 6: "Maria Stuart im germanischen Drama des 17. und 18. Jahrhunderts," and including under it the English writers Banks, John St. John, Mrs. Deverell, etc. There was indisputably a Germanic language, the progenitor of English, Dutch, German proper, Scandinavian, and the like. But there never was a Germanic drama. The drama of England was plain English, nothing more; it worked out its own destiny in utter ignorance of the second *Lautverschiebung* or of Anglo-Frisian unity.

Students of modern literature will be interested in Kipka's estimate of Schiller and Alfieri. It is carefully worked out and full of information. Why Section 9 should be headed "Rückschau und Ausblick," and bundle together Björnson, Swinburne, and "Michael Field," not to speak of Slowacki, Schneegans, and David Graham, is to us anything but clear. The drama of the latter half of the nineteenth century needs more analysis and classification than the author has given to it. We should not be severe, however, in our judgment; for the author (p. viii.), alludes most feelingly to the difficulties of his undertaking. The estimate of Swinburne's trilogy is exalted enough; some of us would say, too exalted. Still, we are aware that the shuttlecock of opinion has not yet ceased to fly to and fro. On two points only will we express our opinion. The trilogy is not a trilogy of plays, but a long-drawn-out romance in dramatic form, and the poet's elaborate rhetoric becomes tiresome. Then, we cannot go to the length of admitting that Swinburne's Mary "ist ein harmonisch fesselndes Bild hoher Einigkeit mit sich selbst" (p. 377). Whoever will maintain that Swinburne's Mary, any more than the real Mary, was never fundamentally at odds with herself, must have more poetic faith than we have.

The index is not sufficient for a treatise of such complexity, and the table of contents is practically useless. Some of the author's best work is in the appendices, of which the fourth: "Gedichte, Romane, Musikwerke," will be especially helpful to the general reader.

Henry Miller has engaged Isabel Irving to play the chief female part in Percy Mackaye's comedy "Mater," which he will produce in San Francisco next month. He will play the leading male part himself on this occasion, but another actor will be seen in it when the play is brought to New York in the autumn, as Mr. Miller is to resume his original character in "The Great Divide."

Bertha Kalich will begin her fourth starring season, under the management of Harrison Grey Fiske, in October, but will not be seen in New York until after Christmas. A new play has been written for her by Madame Fred de Gresac, whose name is known in this city in connection with "La Passerelle" and "The Marriage of Kitty." The story is said to deal with social, artistic, and theatrical life, but to be free from the usual domestic complications. Nor is it tragic in tone, being conceived chiefly in the vein of comedy, although well provided with dramatic situation. Such is the official proclamation. If it is well founded, there seems to be some ground for hope that Madame Kalich may, at last, have found a piece in which her unquestionable ability can be displayed.

Sir Charles Wyndham has revived Mr. Davies's "The Mollusc" at his Criterion Theatre in London with marked success, and it is plain that the vitality of the piece is by no means exhausted. The acting honors are again divided among Miss Mary Moore, Sir Charles Wyndham, and Sam Sothern.

Frank Stayton's comedy of the Middle Ages, "The Two Pins," does not seem to be of much dramatic or—although it is written in blank verse—literary consequence, but it is fairly interesting and amusing, and, as it is excellently acted, is likely to do well at the Aldwych Theatre in London. Mr. Asche, in the character of a burly, tyrannical, but not ill-humored feudal lord, has a part which fits him exactly, and Lily Brayton is not less well suited in the heroine.

For the first time the King of Saxony has bestowed the title of professor of music on a woman—a teacher named Aglaja Orgeni.

One of the novelties of the London season has been a concert devoted entirely to the works of royal composers, of whom the number is considerable. It was given by Miss Aleys Lorraine. *Truth* recalls Brahms's sarcastic remark that it is always injudicious to criticise such works, since one could never be quite sure who might not have written them.

Fifty-three years ago, when Wagner conducted a series of Philharmonic concerts in London, he declared that English orchestral musicians played like machines, never varying their dynamics, and that it would be easier to get sparks of enthusiasm out of a German dance-musician. But the times have changed. August Spanuth has been revisiting London and he writes in the *Staats-Zeitung*: "What shall I tell you about the London Symphony Orchestra? It ranks next to the Boston Orchestra, so great is its excellence. . . . Half a century ago Richard Wagner could still reproach these 'leathern' musicians with being unable to play either forte or piano, and to-day they prove themselves equal to all technical demands, besides indulging in shadings and nuances which arouse the admiration of musical epicures."

Art.

ART AT THE FRANCO-BRITISH EXHIBITION.

LONDON, June 13.

Workmen are still conspicuous at the Franco-British Exhibition in Shepherd's Bush, but the work is sufficiently advanced for an idea of the show as a whole, and also of different sections in particular, among them the Fine Art section.

It is unfortunate that the first impression given by the exhibition is one of tawdriness and commonplace in the architecture. Both entrances are singularly wanting in dignity, while the detail is worthier of a country fair than of an exhibition supposed to celebrate and to cement the friendly relations between two powerful nations. The English, whose genius is not for originality, speak of their exhibition as "The White City," but the borrowed name only invites a comparison that proves how little it is merited. Shepherd's Bush has nothing of the stateliness and beauty of Chicago. The buildings are white, it is true, but here all resemblance ends. The scale is small, the architecture nondescript, the ornament exaggerated and trivial, the grouping of the buildings ineffective.

Disappointment is not left behind at the door of the Fine Art Palace, where, however, there is enough of interest to help one to forget it. The central sculpture court and the galleries which it separates are divided equally between the French and the British. On my first visit it seemed to me that France came less creditably out of the inevitable comparison than Great Britain. But a second visit has shown me that this is simply because more is expected of France in matters of art, and because the French have been singularly unfortunate—or official—in the selection and hanging of their pictures. Before the exhibition opened, there were rumors of differences in the several juries of selection and of consequent resignations, and this would explain much in the French section.

However, the first disappointment over, fine and epoch-making pictures are discovered, though the Hanging Committee, by scattering them has made their discovery a question of time and patience. Had chronological order been more strictly followed, as in Paris in 1900, the gain would have been enormous. The period covered goes back to the beginning of the nineteenth century, and there are small but characteristic examples of Isabey and Delacroix—the latter's sketch, fine and full of color, for the ceiling of the Galerie d'Apollon; there are portraits by Ingres and Baudry, eastern subjects by Decamps and Régnault, the work of the now almost, but undeservedly, forgotten, Théodore Chasseriau—a large enough group to serve as reminder of the conflict between classicism and romanticism in the early part of the century. Coming down further, Corot, Millet, Troyon, Rousseau, Courbet have a place, but better examples of each and all of them might easily have been secured. The Daumier by Corot, lent by the Ville de Paris, is of unusual beauty, and interesting both as a portrait and a painting, but the two landscapes are not of his greatest; while Courbet's La Sieste, also lent by the Ville de Paris, with its tight and niggled trees and rather conventional arrangement, would explain to no one the part Courbet played in the realistic movement of the middle of the century. As little judgment has been displayed in the selection of the work of the impressionists, who are not reached until several galleries have been passed. Manet's Brioche is a triumphant study of still life; his Liseur is characteristic of the period when Velasquez was the paramount influence in his work, and Le Printemps is wonderfully fresh in color, charm, and quality of paint; but these three pictures would not help students who had never seen Manet before to understand why he was such a power in his day, why he attracted such a following of artists, and goaded the critics to such fury. It is the same with Monet. One of his Haystack series is shown, a fine study, without question, of sunlight. There is also one of his Thames series, Waterloo Bridge, with the factories and chimneys of South London beyond; but it only proves that Monet could not see London, or that his technique could not render London atmosphere. The third picture is the best, an early one, of Dutch tulip fields, but it is not very remarkable and the three together would not be sufficient to justify Monet's present reputation. Renoir fares better, for La Loge is among his most typical paintings, and his other two are of only less note. But, though he and Pissarro and Sisley hang with Manet and Monet, the series has not been well enough chosen to account in itself for the importance of Impressionism in the history of art in the nineteenth century.

The drawings and prints are shockingly arranged, on crowded walls, mixed up anyhow with miniatures, water-colors, architectural plans, and decorative designs. I hesitate, therefore, to speak of them, though, in the medley, I chanced upon engravings by Lepère and an etching by Rodin, drawings by Millet, Raffet, Rehouard, a collection of portraits by Ingres.

The sculpture includes examples of Rude and Barye, Rodin and Bartholomé Frémiet and Falguière, Dalon and Mercié. It could have been improved by the exercise of that more liberal policy which the committee in each section seems to have gone out of its way to avoid.

At the first glance, the British galleries appear to maintain a higher standard. The reason is that they are better hung, while the retrospective series begins at an earlier date than in the French collection. The work goes back to the first English painter of any distinction, William Dobson. The greatest of all, William Hogarth, is included, and if the examples chosen are not of his finest, one, Ranelagh, has a special interest as a landscape, a subject he so seldom painted. Reynolds, Gainsborough, and Romney, of course, are prominent, and one of the most celebrated Gainsboroughs can be seen, The Blue Boy from the Duke of Westminster's collection. I know of no better Opie than the Portrait of Mrs. George Warde, in large hat, with blue ribbons, and I have never seen a more splendid, a more supremely beautiful Wilson than A View on the Arno, golden and serene as a Claude.. Turner's Mercury and Herse hangs near, as if to emphasize the triumph of Wilson, whose fame is less, chiefly because he had no Ruskin to proclaim his greatness from the housetops. Constable's Dedham Vale and Bonington's Fish Market, Boulogne—though not showing him at his best—make one wish that the national classification had not been insisted upon, and that these two painters could have hung with the Frenchmen who accepted them as masters long before they were recognized at home.

There would have been a still better opportunity for comparative study had the Realists of the mid-century been shown in their most characteristic work together, irrespective of country. As it is, the pre-Raphaelite pictures, though not very numerous, are enough to prove one thing—that Ford Madox Brown towers head and shoulders above the group. It matters not who was the first to adopt certain methods, or to paint sunlight—he was the great man among them all. Rossetti's Blessed Damozel and Mariana are crude and artificial, Holman Hunt's Isabella and the Pot of Basil is a mass of tedious and inartistic detail, even Autumn Leaves, in which Millais is said to have reached the very heights of pre-Raphaelite expression and poetry, is melodramatic and weak, as they now hang side by side with Ford Madox Brown's work. To study that masterpiece again is to wonder anew—to wonder at its realism, for he had the sense, like the Frenchmen, to go for his subject to the world he knew and not to classical and mediæval dictionaries; to wonder at his power of composition, the unbelievable mass of detail brought into one harmonious whole; to wonder at the light with which it is filled, and at the character recorded in every figure, from Carlyle in the foreground to the sandwich man, seen far beyond, toiling along the sunlit, hilly street of Hampstead.

Could anything show how ephemeral a phase pre-Raphaelitism was in English art, it would be the contrast when the rooms, where these pictures hang, are left for the galleries devoted to living painters. The Brotherhood did not release British art from the yoke of anecdote, nor teach it the value of personal observation and sound technique. If some of the French rooms suggest the old Salon, almost all the modern British rooms recall the Academy. But the Briton knows how to be liberal when it is to his advantage. A residence of a few years in the country has been accepted as qualification for admission, greatly to the Exhibition's advantage. For Sargent, Abbey, Mark Fisher, J. J. Shannon, are found among the painters, Whistler and Pennell among the black-and-white men.

There is a gallery in the Irish Village, which gives several painters another chance to exhibit, and it is interesting to find that J. J. Shannon and Mark Fisher, who can be British or American as occasion requires, can also become Irishmen. The best work here is unquestionably by William Oupen, who knows how to paint if he has not learned how to see things with refinement or distinction, and by Nathaniel Hone, direct descendant of the more famous Irishman of the name. Mr. Hone is absolutely unknown in England, but his landscapes and marines have a vigor and a feeling for the beauty of cloud-swept skies and wide lonely stretches of sea and meadow land, that, now they have been seen in London, should bring him the name and fame he merits as artist above any of his countrymen. N. N.

The Toledo, O., Art Museum has received from E. D. Libbey a gift of $105,000, which will be used in erecting a new building.

The Third International Congress for the Advancement of Drawing and Art Teaching will meet in London, in August, 1908. The expense of an American exhibit and representation must be paid by private subscriptions. The committee in charge consists of James Hall, Ethical Culture School, Sixty-third Street and Central Park West, New York city; Charles M. Carter, Denver, Col.; Prof. William Woodward, Newcomb College, Tulane University, New Orleans. The treasurer, to whom checks are payable, is Cheshire Lowton Boone, Montclair, N. J. Through the efforts of the American committee, a collection of material has been made, illustrating the methods of art training in our public schools. This country will be represented by Mr. Carter and Henry T. Bailey.

H. M. Caldwell Co. sends us two booklets, part of a series on the Great Galleries of Europe, dealing with the Luxembourg and the Tate Gallery. Apart from a few pages devoted to the history of the galleries, the text is confined to brief perfunctory notes, beneath the plates, which might well have been spared. The pictures chosen for illustration are of the more popular order, though occasionally a more serious work of art finds admittance. The reproductions are fairly well executed half-tones.

At the last meeting of the Académie des Inscriptions in Paris, a report was read by M. Merlin, the director of the excavations at Tunis, on some important discoveries recently made at the bottom of the sea. Divers had come on ancient ruins at a distance of about four and one-half miles from the shore. These proved to be marble columns, bronze statues, etc., some in comparatively good preservation. Several of these, especially a fine statue of a youth, have already been secured by the divers. It is hoped to recover the rest of the objects, though it will probably involve considerable expense and time.

Robert Gibb, R. S. A., well-known for his military pictures, and for twelve years curator of the National Gallery of Scotland, has been appointed painter and limner to the King in Scotland. His predecessors in that office have been Raeburn, David Wilkie, William Allan, and Noel Paton.

BOOKS OF THE WEEK.

Allen A. Brown Collection of Music in the Public Library of the City of Boston, Catalogue of the. Vol. I., Part I. Boston: Published by the Trustees. $1 per part.
Allen, James. The Heavenly Life. R. F. Fenno & Co.
Anecdota Oxoniensia. Yûsuf and Zalîkhâ, by Firdausî of Tûs. Edited by Hermann Ethé. Henry Frowde.
Baughman, Nanny Randolph Ball. The True Way of Life. Burlington, Ia.; Published by the author.
Bronson, Walter C. English poems. Chicago: University of Chicago Press. $1.50 net.
Chapman, John Jay. Four plays for Children. Moffat, Yard & Co. $1 net.
Denys, Nicolas. The Description and Natural History of the Coasts of North America (Acadia). Translated by William F. Ganong. Toronto: The Champlain Society.
Dumas, Alexandre. My Memoirs. Translated by E. M. Waller. Vol. IV. Macmillan. $1.75.

The Twentieth Century American

A Comparative Study of the People of the Two Great Anglo-Saxon Nations

By H. PERRY ROBINSON, author of "Men Born Equal," etc.

Crown 8vo. $1.75 net

A remarkably well-informed and sympathetic piece of international social criticism.

G. P. Putnam's Sons, New York and London

Memoirs of Henry Villard

Journalist and Financier

1835-1900

Two volumes, with Portraits and Maps. $5.00 *net.* Postage, 35 cents.

An autobiographical record of the varied and romantic career of the war journalist who subsequently became a power in the financial world, and carried the Northern Pacific Railroad to completion. Full of incident and valuable for its reminiscences of Lincoln and other prominent men of the time, as well as for its descriptions of important battles of the Civil War.

"A book of extraordinary interest. It is written with great ability, in a clear and flowing style; it details with perfect candor the incidents of a great career; it is an admirable report of great events, all of which the writer saw, and a large part of which (after 1870) he was; it exhibits the rise and growth of a rich and powerful personality and a character at once remarkable for its simplicity and its variety."—JOHN WHITE CHADWICK, in the *New York Times* Saturday Review.

"This posthumous autobiography of the late Henry Villard is a work of exceptional interest."—*Commercial and Financial Chronicle.*

HOUGHTON, MIFFLIN & CO.,
BOSTON AND NEW YORK

Fitz's Principles of Physiology and Hygiene

By GEORGE WELLS FITZ, M.D., sometime Assistant Professor of Physiology and Hygiene and Medical Visitor, Harvard University.

xiii+357 pp. 12mo. $1.12

A clear and simple treatment of physiology intended for a high-school course. It lays emphasis upon hygiene and sanitation, with special reference to the conditions of daily life. Experimental work is fully outlined in connection with each chapter, but the illustrated text is so arranged as to be independent of the experiments.

"An exceptionally valuable and an exceptionally interesting work upon modern political developments."—Outlook.

GOVERNMENTS AND PARTIES
IN
CONTINENTAL EUROPE

By A. LAWRENCE LOWELL

Author of "*The Government of England*" and "*Essays on Government*"

"It is a book which will have an unusual value for the political or historical student, for it presents in compact form just the information that is sought as to governments and parties on the other side—information which heretofore it has been necessary to search for with considerable labor through a large number of publications. . . . It must be said of Mr. Lowell's work that it stands alone in its special field for completeness and value. It is bound to remain for a long time to come the standard authority upon the subjects considered."—*Brooklyn Eagle.*

"The information embodied in these volumes is truly encyclopaedic, but the author's treatment of the subject differs from the ordinary encyclopaedia's treatment of it in that an attempt is made to show how the various governments actually work, not merely how they are planned to work, and especially to examine the activities of those dynamos in politics, the parties. Mr. Lowell's book is the fruit of long and exhaustive study, and illumines the whole subject of European government. . . . He is doing for France, Italy, Germany, Austria, Hungary, and Switzerland in brief form what Bryce has done for the United States."
—*Review of Reviews.*

Two volumes. Octavo. Gilt top. $5.00

HOUGHTON MIFFLIN COMPANY
4 Park St., BOSTON 85 Fifth Ave., NEW YORK

Hotel Regent
NEW YORK CITY
at
Sherman Square
Broadway and 70th St.

Situated midway between Central Park and Riverside Drive; removed from the noises of the down town section and in easy access to business, shopping and theatre districts. Subway station nearly opposite. Five minutes from Grand Central Station, 12 minutes from Wall St. All surface cars pass the doors.

The HOTEL REGENT is particularly adapted to those requiring a hotel home, thoroughly modern and of excellence and refinement. The Restaurant and Palm Room are the most attractive in the city.

Reduced rates during summer months. Booklet and further information on request to F. M. ROGERS, Manager.

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with THE NATION stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75 cents.

WHAT WE ARE DOING FOR LIBRARIANS

We now have the most efficient department for the handling of Library orders.

1. A tremendous miscellaneous stock.
2. Greatly increased facilities for the importation of English publications.
3. Competent bookmen to price lists and collect books.

All of this means prompt and complete shipments and right prices.
